AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 277)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in October 1985 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Branch

1985

National Aeronautics and Space Administration

Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I – XI) should be directed to NTIS.

This supplement is available as NTISUB/123/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of \$7 00 domestic; \$14 00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 205 reports, articles and other documents announced during October 1985 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1985 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A85-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc (AIAA), as follows Paper copies of accessions are available at \$8.50 per document Microfiche⁽¹⁾ of documents announced in *IAA* are available at the rate of \$4.00 per microfiche on demand Standing order microfiche are available at the rate of \$1.45 per microfiche for *IAA* source documents.

Minimum air-mail postage to foreign countries is \$2 50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N85-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line

Avail NTIS. Sold by the National Technical Information Service Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation Current values for the price codes are given in the tables on page viii.

Documents on microfiche are designated by a pound sign (#) following the accession number The pound sign is used without regard to the source or quality of the microfiche

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification

Avail SOD (or GPO) Sold by the Superintendent of Documents, U.S Government Printing Office, in hard copy The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail. NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction)

- Avail DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.
- Avail Univ Microfilms Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.
- Avail USGS Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.
- Avail HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.
- Avail BLL (formerly NLL). British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown (if none is given, inquiry should be addressed to the BLL).
- Avail Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).
- Avail. Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.
- Avail U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.
- Avail ESDU Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address, both of which are on page vii.
- Other availabilities If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. Over 1,300 other depositories also exist. A list of the regional GPO libraries appears on the inside back cover.

Utilization of National Aeronautics and Space Administration (NASA) technology in medicine is discussed. The objective is best obtained by stimulation of the introduction of new or improved commercially available medical products incorporating aerospace technology. A bipolar donor/recipient model of medical technology transfer is presented to provide a basis for the team's methodology. That methodology is designed to (1) identify medical problems and NASA technology that, in combination, constitute opportunities for successful medical products, (2) obtain the early participation of industry in the transfer process, and (3) obtain acceptance by the medical community of new medical products based on NASA technology. Two commercial transfers were completed: the Stowaway, a lightweight wheelchair that provides mobility for the disabled and elderly in the cabin of commercial aircraft, and Micromed, a portable medication infusion pump for the reliable, continuous infusion of medications such as heparin or insulin. The marketing and manufacturing factors critical to the commercialization of the lightweight walker incorporating composite materials were studied. Progress was made in the development and commercialization of each of the 18 currently active projects.

A photosensitive protein resembling the visual pigments of invertebrates enables phototactic archaeobacteria to distinguish color. This protein exists in two spectrally-distinct forms, one of which is a transient photoproduct of the other and each of which undergoes photochemical reactions controlling the cell's swimming behaviour. Activation of a single pigment molecule in the cell is sufficient to signal the flagellar motor. This signal-transduction mechanism makes evident a color-sensing capability inherent in the retinal/protein chromophore.

**FREE, GLUCURONIDE, AND SULFATE CATECHOLAMINES IN
THE RAT EFFECT OF HYPOXIA**

J CLAUSTRE, R FAVRE, J M COTTET-EMARD, and L PEYRIN
(Lyon I, University, France) Journal of Applied Physiology (ISSN
0161-7567), vol 59, July 1985, p 12-17 refs

Results are reported from experiments to determine which
conjugated catecholamine, either sulfate (SC) or glucuronide (GC),
is more efficiently synthesized and released in rat plasma after
catecholaminergic stimulation. Exteriorized catheters were used to
obtain blood samples from rats subjected to hypoxic conditions.
The samples were taken at 15 min, 1 and 4 hr after introduction
to hypoxia and 1 and 20 hr after returning to normoxia. Urinary
samples were also collected to determine the relative excretion
rates of the conjugates and to see if the urinary rates correlated
with the plasma rates. The GC decreased 25 percent in hypoxia,
while SC was only mildly affected. It is hypothesized, therefore,
that GC might supply a conjugated catecholamine precursor. The
urinary outputs had low correlations with plasma conjugate levels,
a factor which identified the kidney as the main organ for
deconjugation. M S.K

A85-41643
**HYPOXIA-INDUCED ACTIVATION IN SMALL ISOLATED
PULMONARY ARTERIES FROM THE CAT**

J A MADDEN, C A DAWSON, and D R HARDER (Wisconsin,
Medical College, U.S. Veterans Administration, Medical Center,
Wood) Journal of Applied Physiology (ISSN 0161-7567), vol 59,
July 1985, p 113-118. Research supported by the U.S. Veterans
Administration refs
(Contract NIH-HL-31871)

Responses of the mechanical force (MF) and membrane
potential (MP) in isolated pulmonary arteries of cats experiencing
hypoxic conditions were examined experimentally. The study was
performed to further the understanding of the vasoconstrictor
response often observed in hypoxic conditions. Arteries were
removed from the lungs of anesthetized cats, threaded with
tungsten wires to measure the MF development, and placed in a
sealed chamber whose oxygen partial pressure (PO₂) could be
controlled while the tissue floated in a saline solution. Phentolamine
or indomethacin were also added once responses to specified

PO₂ levels were recorded in order to examine the effects of an
alpha-adrenergic receptor blockade and cyclooxygenase inhibition.
Depolarization was observed in smaller, but not larger, arteries at
PO₂s from 350-300 Torr. A 0.001 M dose of indomethacin blocked
the constriction, but phentolamine did not. The data indicate
constriction control is mediated by substances in the arterial
walls. M S.K

A85-42056
**HYPERTENSION INDUCED BY REPEATED EXPOSURE TO HIGH
SUSTAINED +GZ (HS + GZ) STRESS**

P BORREDON, F PAILLARD, P LISCIA, and C NOGUES (Centre
d'Etudes et de Recherches de Medecine Aerospatiale, Paris,
France) Aviation, Space, and Environmental Medicine (ISSN
0095-6562), vol 56, April 1985, p 328-332 refs
(Contract DRET 81-1015)

The effects on cardiovascular function of restraint and
centrifugation at 8-9 +Gz for 3 x 40 s three times/wk for 3-6
wks or restraint for the same periods without centrifugation are
investigated experimentally in male brown rabbits. The results are
presented in table and graphs and characterized. In the centrifuged
rabbits, systolic arterial pressure (SAP), left-ventricular pressure
(LVP), systemic diastolic AP, and the maximum rate of increase
of LVP are all significantly higher than in uncentrifuged unrestrained
controls, and the myocardium is found to be significantly glycogen
depleted. In the rabbits subjected to restraint alone, only SAP
and LVP are elevated. The implications for the development of
hypertension in humans subjected to repeated high sustained +Gz
are discussed. T K

A85-42057
FLUID REPLACEMENT DURING HYPOTHERMIA

D E ROBERTS, J C BARR, D KERR, C MURRAY, and R
HARRIS (U.S. Army, Research Institute of Environmental Medicine,
Natick, MA) Aviation, Space, and Environmental Medicine (ISSN
0095-6562), vol 56, April 1985, p 333-337 refs

The cardiovascular effects of saline infusion (20 percent of
plasma volume over 10 min) in mixed-breed splenectomized adult
dogs anesthetized with pentobarbital, cooled to 25 C at 3 C/h,
held at 25 C for 2 h, infused, held for 4 h, and rewarmed at 3
C/h are investigated experimentally. In a second group, the infusion
is given immediately prior to the beginning of rewarming, while
controls receive no saline infusion and remain hypovolemic due
to the hypothermia. The results are presented in tables and graphs
and characterized. Hematocrit values are found to be unaffected
by saline infusion, while infusion after 2 h at 25 C produces an
increase in the cardiac output (relative to controls or the second
group) during the rest of the hypothermic period and rewarming.
Cardiac output in all three groups remains depressed (relative to
precooling values) even after rewarming. The implications for the
treatment of human accidental hypothermia are considered. T K

A85-42058* Michigan Univ, Ann Arbor
ANATOMIC EVIDENCE FOR PERIPHERAL NEURAL PROCESSING IN MAMMALIAN GRAVICEPTORS
M D ROSS (Michigan, University, Ann Arbor) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, April 1985, p 338-343 refs
(Contract NAS2-10535, NSG-9047)

Ultrastructural study of utricular and saccular maculas demonstrates that their innervation patterns are complex. There is a clustering of type I and type II hair cells based upon a sharing of afferents, a system of efferent-type beaded fibers that is of intramacular (mostly calyceal) origin, and a plexus-like arrangement of afferents and efferents at many sites in the neuroepithelium. Results suggest that information concerning linear acceleration is processed peripherally, beginning at the hair cell level, before being sent to the central nervous system. The findings may supply a structural basis for peripheral adaptation to a constant stimulus, and for lateral inhibition to improve signal relative to noise.

Author

A85-42061
USE OF RU 25960, A NEW CALCIUM ANTAGONIST, IN NORMOBARIC AND HYPOBARIC HYPOXIA
C SALIGAUT, N MOORE, M CHADELAUD, M DAOUST, P CHRETIEN (Rouen, Universite, Saint-Etienne du Rouvray, France) et al Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, April 1985, p 358-361 Research supported by Houde-ISH Laboratoires refs

RU 25960 - 3-(Bis/3,3-diphenylpropyl/-amino)-propan-1-ol hydrochloride - a vasodilator with calcium antagonist properties, was tested on learning in hypobaric hypoxic rats and survival time in normobaric hypoxic mice. It decreased learning in hypobaric hypoxia, but did not change survival time in mice. This suggests (1) that the mechanisms underlying learning and survival are not the same, and (2) that like other calcium antagonists, RU 25960 has no protective effect against the deleterious effects of hypoxia on the brain.

A85-42062
CHANGES IN THE SERUM LDH ISOENZYMES IN MONKEY DURING CHRONIC EXPOSURE TO SIMULATED HIGH ALTITUDE
H OSADA and A NAKAMURA (Air Self-Defense Force, Aeromedical Laboratory, Tokyo, Japan) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, April 1985, p 362-366 refs

When the monkey was exposed to a simulated high altitude of 18,000 ft (5,486 m) for 30 d, the serum LDH activity was increased to its maximum in 1 week. After the monkey returned to sea level, the enzyme activity showed a rapid recovery. On the basis of electrophoretic analysis of LDH isoenzymes, the percentages of LDH-1 and LDH-2 were decreased during the first 2-3 weeks of hypoxic exposure whereas those of LDH-3, LDH-4 and LDH-5 were increased. After 2 or 3 weeks of hypoxic exposure, LDH-3, LDH-4, and LDH-5 became predominant, indicating that the isoenzyme pattern shifted to an anaerobic form from an aerobic form. These results clearly showed that relative proportions of the five isoenzymes were significantly altered by chronic hypoxia of high altitude and that the elevation of total serum LDH activity induced by hypoxia came predominantly from rapid accumulation of M type LDH isoenzymes in serum.

Author

A85-42067* National Aeronautics and Space Administration Ames Research Center, Moffett Field, Calif
HYPERGRAVITY INDUCED PROLACTIN SURGE IN FEMALE RATS

E MEGORY and J OYAMA (NASA, Ames Research Center, Moffett Field, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 415-418 refs

Acute initial exposure to hypergravity (HG) was previously found to induce prolonged diestrous in rats, which was followed by return to normal estrous cycling upon more prolonged exposure to continuous HG. Bromocryptine was found to prevent this

prolonged diestrous. In this study it is found that in female rats 20 h of 3.14 G exposure (D-1 1200 h until D-2 0800 h) can induce prolactin surge at D-2 1600 h. Shorter exposure time (8 h), or exposure during a different part of the estrous cycle (19 h from D-1 0700 h until D-2 0200 h) could not elicit this prolactin surge. Similar exposure of male rats of HG did not alter significantly their prolactin levels. It is possible that the hypothalamus of male and female rats responds differently to stimulation by HG.

REGULATION OF HEMATOPOIESIS IN RATS EXPOSED TO ANTIORTHOSTATIC, HYPOKINETIC/HYPODYNAMIA. I - MODEL DESCRIPTION

C D R DUNN, P C JOHNSON, R D LANGE, L PEREZ, and R NESSEL (Northrop Services, Inc., Life Sciences Laboratory, Baylor College of Medicine, NASA, Johnson Space Center, Houston, TX, Tennessee, University, Knoxville) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 419-426 refs
(Contract NAGW-308, NAS9-14525, NAS2-10801, NAS2-11586, NAS9-14662)

The effect of a 7-day suspension in a jacket and harness with 20-deg head-down tilt on body weight, food and water consumption, and hematological parameters is investigated experimentally in male Sprague-Dawley rats weighing 150-175 g. The results are presented in graphs and compared with those for unsuspended controls and with published data on rats and humans exposed to microgravity in space flight. Suspended rats are found to have reduced red-blood-cell mass, erythropoiesis, plasma volume (leading to temporarily increased hematocrit), body weight, and food and water consumption, rightward-shifted oxyhemoglobin-dissociation curves, and unchanged platelet count, leucocyte count or PHA reactivity, and red-blood-cell shape distribution. Since many of these effects are also seen in space flight, the present experimental model is considered a promising technique for simulating the hematopoietic effects of microgravity at 1 g.

INCREASE OF PLASMA RENIN ACTIVITY IN MALE AND FEMALE RABBITS SUBJECTED TO DYSBARIC CONDITIONS

C CHRYSSANTHOU, H KIRCIKOLU, and J STRUGAR (Beth Israel Medical Center, New York, New York, City University, NY) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 427-430 refs
(Contract NAGW-470)

The renin-angiotensin-aldosterone system may be implicated in hemodynamic alterations occurring in dysbaric disorders. This report concerns changes in plasma renin activity (PRA) induced by exposure of rabbits to a compression-decompression schedule that does not normally produce clinical manifestations of decompression sickness. The results revealed a significant increase in PRA in 19 of 23 animals following dysbaric exposure. Mean PRA rose from 1.18 ng ang I/ml hr (preexposure) to 2.40 ng ang I/ml hr (postexposure). The increase was particularly pronounced in female animals (217 percent). Asymptomatic intravascular gas bubbles (silent bubbles) were detected by gross or microscopic examination in the majority of the animals. Renin elaboration and secretion in asymptomatic dysbaric exposures may be mediated by bradykinin and/or prostaglandins released or activated in a chain reaction triggered by silent gas bubbles. This hypothesis is also applicable to increased PRA in altitude decompression. Alternatively, elevation of PRA may result from decreased renal perfusion when dysbaric disorders are complicated by significant hypovolemia.

A85-42070**HEMODILUTION DURING STANDARDIZED HEMORRHAGE IN HIGH-ALTITUDE ACCLIMATIZED RATS**

P. CHERDRUNGS (Mahidol University, Bangkok, Thailand) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 431-435. Research supported by the Rockefeller Foundation and National Research Council of Thailand. refs

Ten control rats and sixteen high-altitude acclimatized rats were bled at sea level into a reservoir which maintained arterial pressure at 35 mm Hg. As soon as the animals had spontaneously taken back 30 percent of the maximum bleeding volume, all the shed blood remaining in the reservoir was reinfused. Hemodilution was studied during the first half phase of hypotension starting from the point of initial blood withdrawal and ending at the point of maximum blood loss. Changes in hematocrit, hemoglobin content, total plasma protein, and arterial plasma osmolality were measured. The initial and the maximum blood withdrawal, the oligemic time, and the survival time of the altitude-acclimatized rats were all greater than those for non-acclimatized rats. The higher tolerance to standardized hemorrhagic shock in altitude-exposed rats seemed to be due in part to their more marked hemodilution which allowed more efficient homeostatic regulation of vascular volume. The difference in rate of hemodilution between the two animal groups could not be attributed to arterial hyperosmolality. Author

A85-42076* Wright State Univ., Dayton, Ohio**A STIMULATOR FOR LABORATORY STUDIES OF MOTION SICKNESS IN CATS**

G. H. CRAMPTON and J. B. LUCOT (Wright State University, Dayton, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 462-465. refs (Contract NCC2-229)

A motion sickness device is described which produces motion sickness in about 40 percent of an unselected population of unrestrained female cats during a 30-min exposure at 0.28 Hz. The apparatus provides a gentle wave stimulus, similar to that provided by an amusement park Ferris Wheel. Two cats may be tested at the same time. This device is useful for studies of putative antimotion sickness drugs or the biochemical basis of the emetic response to motion. Author

A85-42078**PERFORMANCE FOLLOWING A 500-675 RAD NEUTRON PULSE**

M. G. YOCHMOWITZ, G. C. BROWN, and K. A. HARDY (USAF, School of Aerospace Medicine, Brooks AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, June 1985, p 525-533. refs

A three-light, three-lever discrete avoidance behavioral task was initiated to study the effects of a 500-675 rad neutron pulse upon performance. Eight primates performed the task for 4 h (3.5 h postexposure) on exposure day and for 4 h on each of 3 d postexposure. For the exposure day, five subjects had a decrease in correct responses, seven had increased reaction times, and six experienced productive emesis within 3.5 hours postexposure. Although the performance degradations were not severe, these data suggest that the performance of time critical tasks could be significantly impaired. Author

A85-42099* Louisville Univ., Ky**ROLE OF INTERFERON IN RESISTANCE AND IMMUNITY TO PROTOZOA**

G. SONNENFELD, A. L. W. DEGREE, J. M. MANSFIELD, A. L. NEWSOME, R. R. ARNOLD (Louisville University, KY, Emory University, Atlanta, GA, Michigan State University, East Lansing) et al. IN The biology of the interferon system 1984. Amsterdam, Elsevier Science Publishers, 1985, p 299-305. refs (Contract NCC2-213, NIH-AI-15467)

Production of interferon (I) in response to protozoan infection, and the interferon-mediated inhibition of parasite replication were studied in order to determine if these effects may be related to immunologic-mediated resistance of the hosts. Two extracellular

parasites-Trypanosoma brucei rhodesiense and Naegleria fowleri were used. Upon infection with the trypanosome, only resistant strains of mice produced I. An early peak of alpha/beta I is followed by appearance of gamma I, which coincided with antibody production and a drop in parasitemia. In case of the amoeba, pretreatment of its suspension with alpha/beta I inhibits its replication in vitro, and appears to protect mice from the infection and the disease. It is proposed that production of interferon, with its regulatory effect on the immune responses, may play a major role in regulating the processes of protozoan-caused diseases.

F. Z. MEERSON (Moscow, Izdatel'stvo Meditsina, 1984, 272 p. In Russian. refs

Consideration is given to the pathogenic mechanisms leading to disorders of the metabolism, structure and function of the heart muscle. The physiological characteristics of both stress-related and ischemic heart disease are described, and the basic organic processes of prevention and repair of the myocardium following injury are listed. A number of chemical compounds found to be effective in preventing and repairing myocardial damage are discussed, including endogenous metabolites, antioxidant compounds, and calcium transport inhibitors. A program of adaptation to high altitude hypoxia, which has been effective in treating and preventing myocardial disease is also described. IH

A POSSIBLE DRIVING MECHANISM FOR REGIONAL REDISTRIBUTION OF CARDIAC OUTPUT DUE TO HYPOVOLEMIA [OB ODNOM IZ VOZMOZHNYKH PUSKOVYKH MEKHANIZMOV REGIONARNYKH PERERASPREDELENIY SERDECHNOGO VYBROSA PRI GIPEVOLEMII]

G S MAZURKEVICH and A I TIUKAVIN (Nauchno-Issledovatel'skii Institut Skoro Pomoshchi, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol 71, May 1985, p 575-580. In Russian. refs

The role of the sinocarotid reflexogenic zone, a neurohormonal mechanism in the brain in the redistribution of cardiac output due to hypovolemia has been investigated experimentally in 40 narcotized cats. It is shown that cardiac output in the abdominal aorta was reduced in cats with intact sinocarotid reflexogenic zones in the presence of hypovolemia (20 percent of blood volume). A relative increase in blood flow was found in the tissues and organs in front of the diaphragm. Following excision of the sinocarotid zones, no increase in blood flow to the abdominal tissues was observed. It is concluded based on the experimental results that sinocarotid reflexogenic zones have an important role in the regulation of basic circulation parameters and regional blood volume. I H

CHANGES IN CARDIOVASCULAR FUNCTION AND HEART ADRENERGIC INNERVATION IN THE PRESENCE OF IMMOBILIZATION STRESS [IZMENENIYA SERDECHNO-SOSUDISTYKH FUNKTSII I ADRENERGICHESKOI INNERVATSII SERDTSA PRI IMMOBILIZATSIONNOM STRESSE U KRYSI]

A M BUNIATIAN, K M MARIAN, and P A KARGINA-TERENTOVA (Nauchno-Issledovatel'skii Institut Normal'noi Fiziologii, Moscow, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol 71, May 1985, p 581-586. In Russian. refs

It is found that the density of the distribution of adrenergic neural terminals in rat myocardial tissues was reduced following thirty hours of immobilization stress. Immediately before death, the density of neural terminals was at its lowest point. Because the main cause of death among the rats was a progressive loss of arterial blood pressure, it is suggested that the reduced distribution of adrenergic terminals was related to a progressive decrease in cardiovascular function. Changes in the distribution of adrenergic terminals in the myocardial tissue are shown in a series of photographs. I H

THE NATURE OF BARORECEPTOR REFLEXES IN THE PRESENCE OF NEGATIVE AND POSITIVE EMOTIONAL STIMULI [KHARAKTER BARORETSEPTORNYKH REFLEKSOV PRI NEGATIVNYKH I POSITIVNYKH EMOTSIOTSENNYKH VOZDEISTVIYAKH]

M G PLISS, N A PATKINA, and V A TSYRLIN (I Leningradskii Meditsinskii Institut, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol 71, May 1985, p 587-592. In Russian. refs

Variations in blood pressure (BP), intersystolic interval (II), and baroreflex sensitivity (BS) were studied experimentally in rats in both negative and positive emotional states. The negative emotional state was induced by ringing a bell and by involuntary electrical stimulation of the brain stem. The positive emotion state was induced by cerebral self-stimulation. It is shown that BP increased during the negative emotional state while II and BS both decreased. The positive emotional state was associated with an increase in

BP, and a decrease in II. Baroreflex sensitivity remained unchanged in the positive emotional state. Some implications of the experimental results are discussed. I H

STUDY OF MINIMAL INHIBITORY CONCENTRATION OF ANTIBIOTICS ON BACTERIA CULTIVATED IN VITRO IN SPACE (CYTOS 2 EXPERIMENT)

R TIXADOR, G RICHAILLEY, G GASSET, J TEMPLIER, J C BES (Centre National d'Etudes Spatiales, Centre Hospitaliere Universitaire de Rangueil, Toulouse, France) et al. Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 748-751. refs

The aim of the Cytos 2 experiment, carried out during the French-Soviet manned flight in July 1982, was to study the bacteria's sensitivity to antibiotics cultivated in vitro during the orbital flight, using the bacterial method of minimal inhibitory concentration (MIC). Two species of bacteria were tested with various antibiotics: *Staphylococcus aureus* with Oxacillin, Chloramphenicol and Erythromycin, *Escherichia coli* with Colistin and Kanamycin. The results show an increase in resistance to antibiotics particularly strong in *E. coli* and weaker in *Staphylococcus aureus*. Considering these results, it is believed that there might be a relationship between the increase in resistance to antibiotics and a stimulating effect on growth rate by the factors of environmental space. FOOD DEPRIVATION AND EXERCISE IN THE HEAT - THERMOREGULATORY AND METABOLIC EFFECTS

R P FRANCESCONI and R W HUBBARD (U S Army, Research Institute of Environmental Medicine, Natick, MA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 771-776. refs

The effects of food deprivation (FD), for the intervals of 24, 48, and 72 h, on thermoregulatory, physiological and metabolic responses were determined in rats exercised in the heat (35°C) to hyperthermic exhaustion. FD did not alter short-term endurance capacity. After prolonged treadmill exercise, the values of core

temperature (after 27 min treadmill time) and of tail-skin temperature (after 20 min) for the control group were significantly higher than for all three FD groups, and the differences persisted through 30 min. Heat exercise after FD intervals of 48 and 72 resulted in hypoglycemia, which was accompanied by marked reduction of the already low blood insulin, as well as in significant hypertriglyceridemia and hyperlactacidemia. Levels of Na, K, urea nitrogen, and creatine phosphokinase were unaffected. I S

LOWER BODY NEGATIVE PRESSURE IN THE TRANQUILIZED RAT

T G BEDFORD and C M TIPTON (Iowa, University, Iowa City) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 786-790 refs
(Contract NIH-HL-21245-05, NIH-HL-29099-01, NIH-GM-07045-04)

The application of lower body negative pressure (LBNP) to tranquilized rats was assessed as an experimental technique to evaluate the response of the cardiovascular system to hypotension. After pilot studies had demonstrated that diazepam (600 micrograms/kg, i.v.) had no significant influence on the pressor response to unilateral carotid occlusion in unanesthetized and unrestrained rats, subsequent rats were tranquilized. When LBNP was applied, the decline in central venous pressure was linearly related to the level of negative pressure as was the initial fall in mean arterial pressure (MAP). Pulse-interval was highly correlated with the initial fall of MAP. The results indicate that the application of LBNP in the tranquilized rat can effectively produce systemic hypotension and elicit cardiovascular reflexes similar to those reported for other animals in response to LBNP, including humans. EARLY CENTRAL VENOUS PRESSURE CHANGES IN THE RAT DURING TWO DIFFERENT LEVELS OF HEAD-DOWN SUSPENSION

F G SHELLOCK, H J C SWAN, and S A RUBIN (Cedars-Sinai Medical Center, Los Angeles, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 791-795. Research supported by the Cedars-Sinai Medical Center refs
(Contract PHS-2271, NIH-HL-0738-05)

The effects of weightlessness, simulated by head-down suspension, and of varying degrees of the suspension head-down tilt angle on cardiovascular adaptive response were studied. Central venous pressure (CVP) was measured by means of chronically implanted CVP catheters in rats subjected to either 45 degrees (Group A) or 20 deg (Group B) head-down tilt angle for 24 h. Throughout the study, CVP was higher in group A than in Group B. In both groups CVP increased significantly during the first 15 min, reaching a peak at 60 min. At 24 h the CVP in rats of Group B returned to the base level, but remained elevated in Group A. It is concluded that the angle of the head-down tilt affects both the early CVP response and the subsequent cardiovascular adaptation to simulated weightlessness. I S

EFFECTS OF INTERFERON ON ANTIBODY FORMATION

G SONNENFELD. In Interferon Volume 2 - Interferons and the immune system. Amsterdam, Elsevier Science Publishers, 1984, p 85-99 refs
(Contract NCA2-OR-400-901, NCA2-OR-400-101, NCC2-2)

Studies of the effects of interferon on primary and secondary antibody responses and of the relationship of interferon to other cytokines, or cell products, are presented. Dosage- and timing-dependent immunoenhancing and immunosuppressive activities of interferon are documented for mouse spleen cell cultures and for mice infected with murine hepatitis virus (MHV-3). A possibility that altered interferon production might lead to immunopathological disorders, such as lupus erythematosus, AIDS, arthritis, etc., is discussed. Latest technological developments are presented that indicate that interferon does apparently play a major role in the regulation of antibody responses. I.S

The following experiments were performed to study the morphology of the adrenals of male rhesus monkeys. Six monkeys were exposed to clinostatic hypokinesia for 7 days and then to head-down tilt at -6 deg for 12 days; two monkeys were exposed only to head-down tilt for 7 days, and 5 monkeys were used as controls. The adrenals exhibited changes of three types: stress reaction manifestations, activation of the glomerular area of the cortex, and synchronization of the medullary matter to noradrenaline production. All these changes reflect adaptive reactions of the animal body to head down tilt. Author

The cardiovascular effect of head down tilt (at an angle of -90 deg) was investigated in 25 mongrel dogs exposed to general anesthesia, myorelaxation or pulmonary ventilation. Changes in the circulation and contractility parameters can be subdivided into three periods. At the early stages of the exposure an increase in contractile function and hemodynamic changes typical of preload were seen. At later stages progressive disorders of systemic and regional hemodynamics, inhibition of contractile function, and increasing metabolic changes were observed. All this resulted in the death of the animals after 12 to 20 hours of head down tilt. Gross structural changes that occasionally were irreversible were detected in organs of the dead animals. Author

OXYGEN UPTAKE AS AN INDICATOR OF ANIMAL ADAPTATION TO ALTITUDE HYPOXIA

V B MALKIN and Y V LOGINOVA
In its USSR Rept Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 71-74 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 47-50
Avail NTIS HC A08

Altitude chamber experiments have shown that the quantity of oxygen consumption in the posthypoxic period as an index of adaptation to hypoxia is of low informative value during the normal course of adaptation, oxygen consumption changes insignificantly or decreases slightly, it increases somewhat if the hypoxic atmosphere contains CO_2 ($pCO_2 = 19-27$ mm Hg) and declines significantly (by 22.6%) only if adaptation is disordered. At the same time, oxygen consumption can be a highly informative index, characterizing the efficiency of adaptation to hypoxia only if it is measured immediately after exposure to acute hypoxia. In this experimental design the magnitude of oxygen consumption increases with increasing oxygen debt which, as follows from our experiments, shows the degree of conditioning to altitude hypoxia

DISTINCTIONS OF RAT LYMPHATIC ORGAN REACTIONS TO ACUTE STRESS FACTOR DURING HYPOKINESIA

Y V VOROTNIKOVA
In its USSR Rept Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 75-81 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 50-54
Avail NTIS HC A08

Female rats long exposed to hypokinesia were then subjected to an acute stress. In this situation the thymus and spleen were examined. The destructive process in the thymus increased in spite of its hypoplasia. This can be attributed to a greater production of corticosteroids by the adrenals caused by the chronic stress. At the same time the white pulp of the spleen decreased insignificantly because it contained no lymphocytes capable to migrate by the time of the acute stress effect. It is concluded that

enhanced destruction of lymphocytes in the thymus in response to an acute stress can be regarded as a diagnostic test of the adrenal state during a chronic stress effect, including hypokinesia

The rate of cell division and emergence of spontaneous and radiation chromosomal aberrations in *Crepis capillaris* exposed to clinostating were determined. The plants were gamma-irradiated with 300 R during clinostating when the primary roots were 1 to 2 mm long. The velocity of clinostat rotation was 2 rpm. The mitotic index was not affected by clinostating alone or combined with irradiation. The exposure to clinostating did not change significantly the total frequency of nuclear aberrations or the distribution of the aberrations of the chromosomal and chromatin type and aberrations resulting from one or two radiation events. It is concluded that the effect of clinostating combined with gamma-irradiation is zero

Evoked potentials (EP) of the sensorimotor cortex of the large hemispheres, reticular formation of the midbrain and cerebellum resulting from the stimulation of the sciatic nerve were recorded on ratio. The exposure to a constant magnetic field of 0.4 T led to an increase of the amplitude and a complication of the shape of EP's due to the appearance of new components. It is found that pretreatment with triphthasine and elenium suppresses the magnetic field effect

The radioprotective effect of ATP and adenosine was investigated on CBA and C sub 57 B1 mice hybrids F sub 1 irradiated with 9 GeV protons. The prophylactic treatment of the animals with ATP at a dose of 350 to 700 mg/kg increased their survival to 63 to 80% for LD sub 78 to 83/30 and to 40% for LD sub 96/30. The administration of adenosine at a dose of 340 mg/kg, equimolar to 700 mg/kg ATP, increased their survival to 9 to 100% and 73%, respectively. It was found that ATP produced a favorable effect on the hemopoiesis of irradiated mice

MORPHOLOGICAL STUDY OF PRIMATE HYPOTHALAMUS AND HYPOPHYSIS AFTER EXPERIMENT WITH ANTIORTHOSTATIC HYPOKINESIA

Y I ALEKSEYEV, Y A SAVINA, and G S BELKANIYA *In its* USSR Rept Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 116-121 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 78-81
 Avail NTIS HC A08

Investigation of large-cell neurosecretory nuclei of the hypothalamus and adenoneurohypophysis of primates is rather important to comprehension of the mechanisms responsible for impairment of fluid metabolism and tissue growth in animals and man exposed both to weightlessness and model experiments using long-term hypodynamia. The data obtained to date warrant the assumption that the partial discharge of fluid, as well as slowing of intracellular metabolic processes and growth of skeletomuscular system of tissues, are attributable, to some extent, to decline in level of secretion of antidiuretic hormone (ADH) vasopress and somatotrophic hormone. A morphological study of the hypothalamopituitary neurosecretory system (HPNS) and cell population of the primate adenohypophysis was conducted which produces somatotropin, after 7- and 19-day antiorthostatic (head-down tilt) hypokinesia (AOH) B W

CHANGES IN NEPHRON AND JUXTAGLOMERULAR SYSTEM OF PRIMATE KIDNEYS UNDER THE EFFECT OF ANTIORTHOSTATIC HYPOKINESIA

A S PANKOVA and M A PALTSEV *In its* USSR Rept: Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 125-130 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 83-86
 Avail NTIS HC A08

In recent years, many studies were pursued in order to demonstrate the mechanisms of action of clinostatic hypokinesia on the body, including the kidneys, however, no detailed morphological studies of primate kidneys had been made. There are merely indications of accumulation of lipids in renal tubules during long-term hypokinesia. Very few experimental studies of primates with antiorthostatic hypokinesia (AOH) have been conducted, and no morphological analysis of organic changes had been made. Yet it is known that one observes redistribution of blood in the body, loss of fluid and some electrolytes, change in activity of the renin-angiotensin-aldosterone system in humans under AOH conditions. A morphological study of primate kidneys under AOH conditions was conducted. In particular the renal circulatory system and juxtaglomerular system (JGS), which secretes renin were studied. The kidneys from 3 Macaca rhesus monkeys, which spent 7 days in clinostatic hypokinesia and 12 in AOH at an angle of -6 deg, in head-down position, and 2 monkeys submitted for 7 days only to AOH served as the material for this study B W

RAT BLOOD SERUM AND LIVER CARBOHYDRATES AND LIPIDS IN RECOVERY PERIOD AFTER 15-DAY HYPOKINESIA

P P POTAPOV and N A TIKHOMIROVA *In its* USSR Rept Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 131-134 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 87-88
 Avail NTIS HC A08

Restriction of motor activity leads to rather serious metabolic and functional disturbances. Systematic and comprehensive investigation of metabolic processes in the recovery period is necessary in order to work out some simple and effective rehabilitation measures. There are relatively few works dealing with this matter. Considerable fluctuations of blood lipid and sugar levels have been found in man and animals in the recovery period following long-term restriction of movement. In some cases, the

changes were even more significant than with immobilization. These studies also revealed that even a prolonged recovery period is not sufficient for normalization of many metabolic parameters. A study of lipid and carbohydrate content of the liver and blood serum at different stages of recovery following relatively brief (15 days) restriction of mobility is reported B W

Investigations were carried out on the role of the amygdaloid complex of the temporal lobe of the brain, caudate nucleus and dorsomedial nucleus of the thalamus in formation of nystagmic and some autonomic vestibular reactions. These structures are referable to the limboreticular complex of the brain, the connections of which, in particular with the vestibular system, have already been demonstrated by many authors. The structures selected here have been virtually unstudied in this respect. Experiments were performed on 89 chinchilla rabbits weighing 2.5-3 kg. The dynamics of heart rate (HR) and respiration rate (RR) were studied while rotating the animals in an isolation chamber for 1 h on a special revolving device simulating angular sign-variable accelerations, by means of pendulumlike rotation of a horizontal platform with the animal to the left and right for 4 s, with maximum angular velocity of 180 deg/s and 4-s interval between two rotations B W

For 25 months 100 male SPF (Specific-Pathogen-Free) rats were exposed to pulsed 2450-MHz circularly polarized microwaves, at an average power density of 0.48 mW/sq cm, another 100 rats served as sham-exposed controls. Evaluation of survival time showed no statistically significant difference during any phase of the life span. There was no association between a specific cause of death and the treatment condition. Except for rats that died of urinary tract blockage, there is some indication that the survival times were longer in the exposed animals. Of 1992 nonneoplastic lesions, only glomerulonephropathy was less frequently observed in the exposed animals, no other lesions differed statistically. Of 192 neoplastic lesions observed, no specific increase was seen in any specific organ or tissue. Collapsing of the data and an analysis with respect to the occurrence of all neoplasms showed no difference for benign lesions, but a statistically higher incidence of primary malignancies in the exposed animals than in the sham exposed. The biological significance of this finding is questionable at this time. GRA

CHANGES IN THE IMPEDANCE AND BIOELECTRICAL ACTIVITY OF THE CEREBRAL CORTEX OF RATS UNDER THE ACTION OF ANAESTHETIC DRUGS

N V DMITRIYEVA, E V KULESHOV, and E K ORDZHONIKIDZE Apr 1985 11 p refs Transl into ENGLISH from Zhurnal Vysshej Nervnoj Deyatel'nosti (Moscow), v 18, no 3, 1968 p 463-468

(HSE-TRANS-10371) Avail NTIS HC A02/MF A01

The distribution and displacement of ions during stimulation of the cerebral cortex is studied and logical relations between ion shifts in the cortex and the functional state of the brain is established. This progress has been particularly aided by the development of a method of measuring impedance which enables the observation of the dynamics of ion shifts in the extracellular medium and demonstrates the ability of the ions not only to displace

in the direction of an externally applied field, but also to diffuse into the cell and from the cell into the surrounding medium. Certain changes in the physical and chemical condition of the cerebral cortex are demonstrated under the action of anaesthetic substances, and a method of recording the impedance and the electrical activity of the cerebral cortex of rats was used. This report presents the fiscal year (FY) 1984 activities, accomplishments, and planned research efforts of the Biocatalysis Project. In the Molecular Modeling and Applied Genetics work element, the following activities were carried out: (1) physical and genetic evidence was provided for a method of inserting and amplifying genetically engineered traits in the chromosomes of microorganisms, (2) 16 strains of a mutant fungus with an above-average ability to synthesize the cellulose enzyme complex were identified and described genetically, and (3) a force-field model of enzyme behavior was refined and tested successfully for the enzyme thermolysin. In the Bioprocess Engineering work element, advances were made in the mathematical modeling of cellular processes at the molecular level such that the performance of different classes of bioprocess reactor vessels using various operating strategies can now be evaluated. In the Process Design and Analysis work element, the impact of a combination of technical advances on the economics and energy efficiency of a biocatalyzed acetone/butanol/ethanol production process were analyzed, and development of a computer algorithm for defining and evaluating the energy consumption and facility/operating costs of a biocatalytic process was initiated.  (Contract DE-AC02-76EV-01300)
 (DE85-011273, DOE/EV-01300/49) Avail. NTIS HC A02/MF A01

Allelic variation of R is manifest as tissue-specific expression of anthocyanin, conferred by independently acting units termed genic elements. These elements often are organized as complexes of tandemly duplicated, homologous segments. The structure of individual genic elements were illustrated which lead to a model of R structure whereby a genic element consists of a genetically short, tissue-specific component which is unique to given elements, and a longer tissue-nonspecific segment, common to other elements. Various genetic phenomena exemplified by R are characterized including the behavior of transposable insertion sequences, unusual recombinational events, and alternative means of assessing genetic homology. The behavior of transposable insertion sequences, unusual recombinational events, and

alternative means of assessing genetic homology is reported. DOE

 (DE85-010103, LA-UR-85-823, CONF-8410230-12) Avail. NTIS HC A02/MF A01

A new recombinant DNA system is being developed for the detection and measurement of genetic change in humans caused by exposure to low level ionizing radiation. A unique feature of the method is the use of cloned repetitive DNA probes to assay human DNA for structural changes during or after irradiation. Repetitive sequences exist in different families. Collectively they constitute over 25% of the DNA in a human cell. Repeat families have between 10 and 500,000 members. Repetitive DNA sequence libraries using recombinant DNA techniques have been constructed. Individual repeats comprising 75 to 90% of the mass of human repetitive DNA have been isolated and characterized. Repeats used in our assay system exist in tandem arrays in the genome. Perturbation of these sequences in a cell, followed by detection with a repeat probe, produces a new, multimeric ladder pattern on an autoradiogram. The repeat probe used in the initial study is complementary to 1% of human DNA. Therefore, the sensitivity of this method is several orders of magnitude better than existing assays. Preliminary evidence from human skin cells exposed to acute, low-dose X-ray treatments indicates that DNA is affected at a dose as low as 5R. Author

FUNCTION OF A DEVICE FOR DETECTION OF BIOLOGICAL AEROSOLS IN FIELD TESTING
 P HALLIN Nov 1984 26 p refs In SWEDISH, ENGLISH summary
 (FOA-C-40194-B2, ISSN-0347-2124) Avail. NTIS HC A03/MF A01, Research Institute of National Defence, Stockholm KR 50

A device for detection of biological aerosols based on alkaline luminophosphate reaction with ironporphyrins (e.g., hematin) in microorganisms was developed. Laboratory testing was done to optimize the system. Results from field tests of two prototypes are presented. The detection limit is 3 to 5 million bacteria/cum. The time for collection, analysis, and detection is 5 min. The two prototypes work well, even at high background levels which deteriorate the sensibility of the system. Author (ESA)

EFFICIENCY TESTS OF SAMPLERS FOR MICROBIOLOGICAL AEROSOLS, A REVIEW
 E HENNINGSON and I FAENGMARK Nov 1984 43 p refs In SWEDISH, ENGLISH summary
 (FOA-C-40199-B1, ISSN-0347-2124) Avail. NTIS HC A03/MF A01, Research Institute of National Defence, Stockholm KR 50

To obtain comparable results from studies using a variety of samplers of microbiological aerosols with different collection performances for various particle sizes, methods reported in the literature were surveyed, evaluated, and tabulated for testing the efficiency of the samplers. It is concluded that these samplers were not thoroughly tested, using reliable methods. Tests were conducted in static air chambers and in various outdoor and work environments. Results are not reliable as it is difficult to achieve stable and reproducible conditions in these test systems. Testing in a wind tunnel is recommended. Author (ESA)

INVESTIGATION OF VARIATION IN THE CONCENTRATION OF BACTERIA IN OUTDOOR TESTING, WITH THE USE OF A DETECTOR FOR AEROSOLS OF BACTERIA

P HALLIN, G LINFORS, and G SANDSTROEM Sep 1984 20 p refs In SWEDISH, ENGLISH summary (FOA-C-40201-B2, ISSN-0347-2124) Avail NTIS HC A02/MF A01, Research Institute of National Defence, Stockholm KR 50

The assay is based upon the alkaline luminoperborate reaction with ironporphyrins (e.g., hematin) in microbes and especially bacteria. By passing the liquid from the air sampler for 10 min through a 0.4 micron filter which eliminates bacteria, the chemiluminescence depending only on the reagents and the chemicals is determined. The difference between the luminescence measured in the field test, and the previous figure, represents the background level in the air. Results show a variation in concentration of bacteria at different times during the summer. The amount of living bacteria = viable count (VC) was also determined. The described detector counts living and dead bacteria. Only 1 in 1000 bacteria are living when VC and chemiluminescence figures are compared. Author (ESA)

CHANGES IN PENTOSE AND GLUCURONATE PATHWAY DEHYDROGENASES IN RAT BRAINS FOLLOWING SINGLE OR MULTIPLE HYPOTHERMIC EPISODES Abstract Only

N G VOLZHINA In its USSR Rept Life Sci Biomed and Behavioral Sci (JPRS-UBB-85-017) p 94-95 7 Jun 1985 Transl into ENGLISH from Ukr Biokhim Zh (Kiev), v 57, no 1, Jan - Feb 1985 p 67-70 Avail NTIS HC A07/MF A01

Studies were conducted on the changes in the dehydrogenase activities of the pentose and glucuronate pathways of the brain of rats subjected to hypothermic episodes lowering their rectal temperatures to 19 to 20 deg C. A single reduction of body temperature to 20 deg C resulted in marked decrease in glucose-6-phosphate (1) and 6-phosphogluconate (2) dehydrogenases (pentose pathways), as well as in an increase in the activity of UDP-glucose dehydrogenase (3) glucuronate pathway. After 5 to 7 hypothermic episodes, 1 and 2 showed a 15 to 25% decrease in activity, while 3 showed a 54% increase. After 15 to 17 hypothermic episodes, 1 and 2 decreased 50 to 53% in activity, while the activity of 3 decreased 85%. These cold-induced changes in the enzymes of the pentose and glucuronate pathways, which share the same basic substrate, places them in competition with the Embden-Meyerhof pathways for glucose-6-phosphate. EFFECTS OF SIMULATED WEIGHTLESSNESS ON BONE MINERAL METABOLISM

R K GLOBUS, D D BIKLE, and E MOREY-HOLTON (NASA, Ames Research Center, Moffett Field, CA, U.S. Veterans Administration, Medical Center, San Francisco, CA) Endocrinology (ISSN 0013-7227), vol 114, no 6, 1984, p 2264-2270 refs

It is pointed out that prolonged space flight, bedrest, and immobilization are three factors which can produce a negative calcium balance, osteopenia, and an inhibition of bone formation. It is not known whether the effects of gravity on bone mineral metabolism are mediated by systemic endocrine factors which affect all bones simultaneously, or by local factors which affect each bone individually. The present investigation has the objective to test the relative importance of local vs systemic factors in regulating the bone mineral response to conditions simulating weightlessness. Experiments were conducted with male Sprague-Dawley rats. The test conditions made it possible to compare the data from weighted and unweighted bones in the same animal. The obtained findings indicate that a decrease in bone mass relative to control value occurs rapidly under conditions which simulate certain aspects of weightlessness. However, this decrease reaches a plateau after 10 days. G R

A RE-EVALUATION OF THE MINIMUM ALTITUDE AT WHICH HYPOXIC PERFORMANCE DECREMENTS CAN BE DETECTED

B FOWLER, M PAUL, M TAYLOR (York University, Ontario, Canada), G PORLIER (Defence and Civil Institute of Environmental Medicine, Ontario, Canada), and D D ELCOMBE (Civil Aviation Medical Unit, Ontario, Canada) Ergonomics (ISSN 0014-0139), vol 28, May 1985, p 781-791. Research supported by the Department of Health and Welfare refs

A series of experiments using various performance tests has failed to demonstrate an initial transient increase in reaction time on a spatial transformation task at an altitude of 8000 ft, as reported by Denison et al (1966). In experiments with a spatial transformation task performed at a workload of 27 W with the percentage of arterial oxyhemoglobin saturation (SaO2) held at the equivalent of 8000 feet in altitude, initial reaction time did not increase. When SaO2 was stabilized at 8000 feet, and the workload was allowed to vary freely during the performance of the spatial transformation task, an increase in reaction time was observed which was associated to an accompanying decrease in SaO2. It is concluded that the minimum altitude at which hypoxic performance decrements can be detected is greater than 8000 feet. The decreased arterial O2 saturation observed in the second experiment is explained by a combination of hypoxia, exercise, and hypoventilation due to breathing resistance. It is argued that this combination may have been a factor in the increased reaction time found by Denison et al. I H

INCREASED GRAVITATIONAL STRESS DOES NOT ALTER MAXIMUM EXPIRATORY FLOW

D PYSZCZYNSKI, S N MINK, and N R ANTHONISEN (Manitoba, University, Winnipeg, Canada, New York, State University, Buffalo) Journal of Applied Physiology (ISSN 0161-7567), vol 59, July 1985, p 28-33. Research supported by the Medical Research Council of Canada refs (Contract NIH-HL-23190)

Six human subjects underwent centrifuge trials while being monitored for expiratory levels to determine if added gravitational

stress would affect regional lung emptying patterns and the maximum expiratory flow volume (MEFV). The subjects experienced 1, 2 and 3 g accelerations while full and 60 percent MEFV curves were generated from data obtained through a pneumotachograph. An 80 percent He-20 percent O₂ mixture was breathed. No correlations were found between changes in gravitational stress and the MEFV curves. It is postulated that the stresses may have affected the regional emptying sequences even though the total flows were steady. M S K

EFFECT OF NORMOXEMIC AND HYPOXEMIC EXERCISE ON RENIN AND ALDOSTERONE

J W SHIGEOKA (Utah, University, Salt Lake City), G L COLICE (South Florida, University, Tampa), and G RAMIREZ (James Haley Veterans Hospital, Tampa, FL). *Journal of Applied Physiology* (ISSN 0161-7567), vol 59, July 1985, p 142-148. Research supported by the U.S. Veterans Administration and University of South Florida. refs

Brief, rapid rises in plasma renin activity (PRA) are frequently observed during exercise at sea level, but not at high altitudes. One group of five human subjects performed treadmill exercises in sea level atmosphere one day, then in simulated high altitude conditions the next. A second group performed sequential sessions in each atmospheric condition on one day, then reversed the order on the second day. Analyses of blood samples showed that PRA increased in both altitude conditions, while the plasma aldosterone levels (PLA) were significantly higher in normoxemic conditions than in hypoxemic conditions. The PRA and PLA became disconnected in hypoxemic exercise, although the cause could not be identified. M S K.

COMPARISON OF THERMAL RESPONSES BETWEEN REST AND LEG EXERCISE IN WATER

M M TONER, M N SAWKA, W L HOLDEN, and K B PANDOLF (U.S. Army, Research Institute of Environmental Medicine, Natick, MA). *Journal of Applied Physiology* (ISSN 0161-7567), vol 59, July 1985, p 248-253. refs

The thermal and metabolic responses of male human subjects were monitored during immersion in water at temperatures as low as 18°C in the presence and absence of leg exercise. The respiratory volume, metabolic rate, and skin, rectal and esophageal heat flows were recorded, as was the body fat percent. The data revealed that core temperature was more effectively maintained with leg exercise than with rest in cool and cold water. M S K.

CENTRAL EFFECTS OF H₁ AND H₂ ANTIHISTAMINES

A N NICHOLSON (RAF, Institute of Aviation Medicine, Farnborough, England), Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 56, April 1985, p 293-298. refs

H₁-antihistamines are usually associated with impairment of central nervous functions, but unacceptable decrements in performance may not be an inevitable sequel of their use. Effects are dependent on the ability of a particular drug to cross the blood brain barrier, and so compounds which cross so slowly that tolerance of the central nervous system can develop gradually without any immediate changes in performance are of interest. However, sustained release formulations and compounds which have a selective affinity for the peripheral receptor may also have their part to play in the management of allergic states in those involved in skilled activity. As far as H₂-antagonists are concerned, it is likely that as they are less liposoluble they would be free of central effects. Studies on the central effects of H₁ and H₂ antagonists are reviewed, and tentative recommendations are made in respect of these findings concerning the possible use of these drugs in aircrew. HYPNOTICS AND AIRCREW

A N NICHOLSON, B M STONE (RAF, Institute of Aviation Medicine, Farnborough, England), and T ROTH (Henry Ford Hospital, Detroit, MI). *Aviation, Space, and Environmental Medicine* (ISSN 0095-6562), vol 56, April 1985, p 299-303.

The medical management of sleep disorders in aircrew members working irregular hours under demanding work conditions is discussed, with a focus on the use of hypnotic agents, reviewing the results of recent pharmacological experiments. The persistence of effects and the possibility of residual sequelae are examined for relatively long-lasting hypnotics such as the diazepam family and for short-duration agents such as diazepam and cyclopyrrolones, and a drug and dosage which can shorten sleep-onset latency, reduce awake activity and drowsy sleep, and leave sleep architecture unaffected are seen as the ideal. The use of hypnotics for subjects of age 45 or older is considered, and some general recommendations based in part on recent Royal Air Force experience (Baird et al., 1983) are given. T K.

LOUISIANA STATE UNIV., SHREVEPORT EVALUATION OF ANTIMOTION SICKNESS DRUG SIDE EFFECTS ON PERFORMANCE

C D WOOD, J E MANNO, B R MANNO, H M REDETZKI, M J WOOD (Louisiana, State University, Shreveport) et al. *Aviation, Space, and Environmental Medicine* (ISSN 0095-6562), vol 56, April 1985, p 310-316. refs
(Contract NAS9-16801)

The effects of anti-motion-sickness drugs on the performance in computerized-pursuit-meter tests of groups of ten 18-30-yr-old male and female subjects are investigated experimentally using double-blind placebo techniques. The results are presented in tables and graphs and discussed in detail. The proficiency scores are as good as or better than placebo values for subjects given d-amphetamine (DA) 5 or 10 mg, promethazine (P) 25 mg + scopolamine (S) 400 ng + DA 10 mg, S 1 mg + DA 10 mg, S 250-600 ng, marezine 50 mg, meclizine 50 mg, dimenhydrinate 50 mg, S 1 mg + DA 5 mg, or P 25 mg + DA 10 mg. Significantly lower scores are seen in subjects given S 800 ng or 1 mg, P 25 mg (oral or IM), P 25 mg + S 400 ng, and P 25 mg oral + P 25 mg IM + DA 10 mg. T K.

PHYSIOLOGICAL CHARACTERISTICS OF ELITE SPORT PARACHUTISTS

R W DEITRICK (California, State University, Long Beach), D L HOLMES (Nevada, University, Las Vegas), and M MURPHY (Chapman College, Orange, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, April 1985, p 351-357 refs

The results of physiological fitness tests performed on a group of 10 male elite sport parachutists (skydivers) of ages 27-38 yrs and mean parachuting experience 10.8 yrs are reported and compared with those on a group of sedentary male subjects of the same ages and with published data on other elite athletes. Significantly better aerobic power, vital capacity, maximum heart rate, back hyperextension flexibility, and body fat content are found relative to the controls, while differences in resting heart rate, absolute body weight, dominant-hand grip strength, and lower-back/hamstring flexibility are not significant. The comparison with other elite athletes reveals generally similar values, but significantly lower aerobic power and higher relative body fat in the parachutists. Regular aerobic exercise and stretching/flexibility programs are recommended for prospective sport parachutists.

CARDIOVASCULAR DISEASE AMONG U.S. NAVY PILOTS

A HOIBERG (U.S. Navy, Naval Health Research Center, San Diego, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 397-402 Navy-supported research refs

This study's objectives were to determine the influence of age and occupational factors on cardiovascular disease (CVD) incidence among U.S. Navy pilots diagnosed with CVD during a 12.5-year time period ($n = 150$) and to identify precursory diseases associated with CVD. Results showed a relationship between CVD and age; pilots, on the average, were more than 3 years younger at the time of CVD onset than other officers. No occupational factor was associated with CVD; fighter pilots had the highest rates of acute myocardial infarction and chronic ischemic heart disease. Angina pectoris was observed as a precursory disease of chronic ischemic heart disease, and several behaviorally related disorders (e.g., alcoholism) occurred with hypertension. Subsequent research should include all U.S. military pilots to examine, in a larger population, the influence on CVD of such occupational factors as flight in high-performance aircraft. An intervention program should be implemented to modify the lifestyles of pilots who had been hospitalized for hypertension and/or such conditions as obesity and alcoholism.

EFFECTS OF A 7-DAY HEAD-DOWN TILT (-6 DEG) ON THE DYNAMICS OF OXYGEN UPTAKE AND HEART RATE ADJUSTMENT IN UPRIGHT EXERCISE

J STEGEMANN, D ESSFELD, and U HOFFMANN (Koeln, Deutsche Sporthochschule, Cologne, West Germany) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 410-414 refs

Oxygen uptake ($\dot{V}O_2$) kinetics and heart rate (HR) kinetics were studied in six healthy male students before and on days 1, 3 and 5 after a continuous 7-d antorthostatic bedrest (-6 deg). The exercise test protocol consisted of pseudorandom binary sequences (PRBS) of workload (W) performed on a bicycle ergometer in the upright position (20 W - 80 W, 15 bits, 30 s per bit, the sequence was repeated three times). Amplitude ratio and

phase of the W- $\dot{V}O_2$ and W-HR relations were computed at six harmonic frequencies in the range 0.014 - 0.084 rad/s. After bedrest the $\dot{V}O_2$ kinetics was found to be impaired at the harmonic frequencies greater than 0.056 rad/s. Additionally, the mean heart rate during the PRBS cycles was increased (108 ± 15 as compared to 92 ± 10 /min). There were no significant effects on HR kinetics and on the static W- $\dot{V}O_2$ relation. During an endurance training program both $\dot{V}O_2$ and HR changes were restored to the prebedrest levels. It is concluded that the impairment of $\dot{V}O_2$ kinetics can be attributed mainly to muscular factors.

PHYSIOLOGICAL ACCLIMATIZATION TO HEAT AFTER A SPELL OF COLD CONDITIONING IN TROPICAL SUBJECTS

G PICHAN, K SRIDHARAN, Y V SWAMY, S JOSEPH, and R K GAUTAM (Defence Institute of Physiology and Allied Sciences, Delhi, India) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 436-440 refs

The effects of brief spells of cold conditioning on heat acclimatized tropical subjects on the decay and reacclimatization status to heat were evaluated on 12 Indian male infantry soldiers in the cooler months at Delhi. After 8 d of heat acclimatization in a climatic chamber maintained at 45°C dry bulb and 30 percent relative humidity the subjects were conditioned to cold for 21 d by exposing them to a temperature of 10°C daily for 4 h. During the cold-conditioning phase the subjects had no access to either heat exposure or strenuous work. The cold conditioning was followed by reacclimatization to heat. Significant loss in heat acclimatization status was observed, both in terms of exercise oral temperature and heart rate. The loss in status after 1 d reinduction to heat acclimatization was in the range of 45-56 percent. However, within 3 d all of the subjects once again regained the full acclimatization status. The cold conditioning did not alter the sweat output during the reinduction to heat phase.

INTRACARDIAC ELECTROPHYSIOLOGIC STUDIES IN THE MEDICAL EVALUATION OF AVIATORS

W J OETGEN (U.S. Army, Walter Reed Army Medical Center, Washington, DC), S L JONES (Uniformed Services University of the Health Sciences, Bethesda, MD), and F S PETTYJOHN (Winn Army Community Hospital, Fort Stewart, GA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, May 1985, p 443-450 refs

Ten aviators with cardiac symptoms or electrocardiographic abnormalities underwent electrophysiologic testing. Four patients were studied because of symptoms including palpitations, near-syncope, and sudden cardiac death. Six patients were studied because of electrocardiographic abnormalities including AV block, right bundle branch block, sinus bradycardia, ventricular tachycardia, and questionable Wolff-Parkinson-White syndrome. Three patients with bradycardia and/or AV block were found to have increased vagal tone. A fourth patient had near-syncope and intra-Hisian block. Of four patients evaluated for palpitations and/or tachycardias, one had nonsustained ventricular tachycardia, one had easily inducible ventricular tachycardia and fibrillation, one had a normal study, and one had coronary artery disease with an unanticipated prolonged HV interval. The diagnosis of congenital right bundle branch block and Wolff-Parkinson-White syndrome were confirmed in the final two patients. Performance of electrophysiologic testing provided objective data to allow appropriate therapeutic and administrative decisions in these aviators.

THE ENVIRONMENTAL SYMPTOMS QUESTIONNAIRE IN ACUTE MOUNTAIN SICKNESS

A D WRIGHT, G T JONES, R F FLETCHER, J H MACKINTOSH, and A R BRADWELL (Birmingham, University, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, June 1985, p 572-575 Research supported by Lederle Laboratories, West Midlands Regional Health Authority, and Arthur Thompson Trust refs

The performance of the Environmental Symptoms Questionnaire (ESQ), a modified version of the questionnaire described by Sampson and Koback (1980), in evaluating the symptoms of acute

mountain sickness in one female and 19 male subjects aged 22-54 yrs during a 5-d ascent to 4980 m and a 4-d descent to 914 m is reported. The structure of the ESQ and the data-reduction procedures are explained, and the responses (in twice-daily completions of the ESQ) are compared statistically with daily clinical AMS interviews in a table. Highly significant correlations (p less than 0.001) with r values 0.70-0.77 are found for four groups of related symptoms. T K

A85-42086 BIOGENIC AMINE/METABOLITE RESPONSE DURING IN-FLIGHT EMERGENCIES

G S KRAHENBUHL, J HARRIS, R D MALCHOW, and J R STERN (Arizona State University, Tempe) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, June 1985, p 576-580. Research supported by the Arizona State University refs (Contract F33615-80-K-0022)

Urine excretion of epinephrine (E), norepinephrine (NE), dopamine (DA), serotonin (5HT) and the metabolites vanillylmandelic acid (VMA), 4-hydroxy-3-methoxyphenylglycol (MHPG), homovanillic acid (HVA), 3, 4-dihydroxyphenylacetic acid (DOPAC), and 5-hydroxyindoleacetic acid (5-HIAA) was determined for students ($n = 19$) and instructors ($n = 21$) involved in flying training in-flight emergencies. Timed urine samples were analyzed using high-performance liquid chromatography with electrochemical detection. Basal excretion rates were determined at a later date. Four indices showed significant alteration during the emergencies. Epinephrine and the sum of epinephrine plus norepinephrine increased, the ratio dopamine/norepinephrine decreased and the ratio norepinephrine/serotonin increased. Instructors and students differed only in that VMA and the sum VMA and MHPG were higher in students. Among the emergencies monitored, smoke and fumes in the cockpit and mechanical problems caused the greatest stress responses. Author

A85-42087 DISCHARGE CHARACTERISTICS OF MOTOR UNITS AND THE SURFACE EMG DURING FATIGUING ISOMETRIC CONTRACTIONS AT SUBMAXIMAL TENSIONS

J S PETROFSKY and C A PHILLIPS (Wright State University, Dayton, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, June 1985, p 581-586. USAF-supported research refs (Contract DAMD17-80-C-0089)

Single-motor-unit discharge-frequency measurements and surface and electromyograms (EMGs) obtained from eight male volunteers during voluntary and electrically stimulated maximal and submaximal fatiguing isometric contractions of the adductor pollicis muscles are reported. The rms amplitude of the EMG during tension-to-fatigue trials at 25, 40, or 55 percent of maximum voluntary strength is shown to increase both over the course of the contraction and as a function of the tension applied, an effect attributed to the lower frequency of motor-neuron discharge at lower tensions. T K

A85-42088 TRANSDERM SCOPOLAMINE EFFICACY RELATED TO TIME OF APPLICATION PRIOR TO THE ONSET OF MOTION

G D LEVY and M H RAPAPORT (California, University, Irvine) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, June 1985, p 591-593. refs

Transdermal scopolamine is evaluated, with a focus on the time of application prior to the onset of motion. In this study 44 subjects participated. The first group applied the transdermal disk within 4 h and the second group 8 h or more prior to the onset of motion. A significant decrease in the incidence and the degree of motion sickness is observed in the group with at least 8 h of scopolamine application prior to sea travel. Therefore, the transdermal scopolamine system should be applied at least 8 h before potentially disturbing motion to provide adequate prophylaxis against motion sickness. No significant difference in

motion sickness susceptibility between men and women is found, in contrast to earlier reports. Author

A85-42091* NATIONAL AERONAUTICS AND SPACE ADMINISTRATION JOHNSON (LYNDON B.) SPACE CENTER, OTOLITH TILT-TRANSLATION REINTERPRETATION FOLLOWING PROLONGED WEIGHTLESSNESS - IMPLICATIONS FOR PREFLIGHT TRAINING

D E PARKER, M F RESCHKE, A P ARROTT, J L HOMICK, and B K LICHTENBERG (NASA, Johnson Space Center, Houston, TX, Miami University, Oxford, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, June 1985, p 601-606. Research supported by the Miami University refs (Contract NAS9-14538)

Observations with three astronauts yielded two major findings. First, perceived self-motion during sinusoidal roll differed immediately postflight from preflight. Between 70 and 150 min after landing, roll was perceived primarily as linear translation. Secondly, more horizontal eye movement was elicited by roll simulation immediately postflight relative to both preflight and later postflight observations. These results support an 'otolith tilt-translation reinterpretation' hypothesis, which has clear implications for understanding astronaut reports of space motion sickness during the early period of orbital flight. A proposal for 'prophylactic adaptation training' which may provide preflight adaptation to weightlessness, derives from this research. Author

A85-42132 CERTAIN METHODS OF THE FUNCTIONAL EXAMINATION OF ATHLETES [NEKOTORYE METODY FUNKSIONAL'NOGO ISSLEDOVANIYA SPORTSMENOV]

R SVANISHVILI (Tbilisi, Izdatel'stvo Sabchota Sakartvelo, 1984, 152 p. In Russian) refs

Problems of functional examination in sports medicine are examined, taking into account athletic specialization and the nature of the training. The hemodynamic, cardiodynamic, vegetative-nervous, and neuromuscular functional indices of athletes in a state of rest are examined. Also considered are features characterizing the physiological adaptation of athletes to dynamic factors; attention is given to a combined functional test of the cardiovascular system, cardiodynamics during physical exercise, and physical work capacity. B J

A85-42485# STUDIES OF INFRA-THERMOGRAM OF THE HEAD AND NECK

C PANG, H-Y SUN, and S-Y CHANG (Chinese Journal of Space Sciences, vol 5, Jan 1985, p 53-58. In Chinese, with abstract in English) refs

The characteristics of the skin temperature distribution in the head and neck regions under two different air temperatures are researched. According to the degree of the effects of air temperature on them, the distribution in the head and neck regions can be divided into thermostable and thermolabile areas. Digital image displays of temperature show skin temperature in irregular and large lumped or small scattered distributions. The latter condition more often occurred under the air temperature of 20°C. Statistical measures show that mean skin temperature under higher air temperature has the following features: the temperature of the frontal part is higher, that of the lateral part is moderate, while that of the back part is lower. When the air temperature was lowered, the differences among these parts did not remain. Author

A85-42529 PHYSIOLOGICAL ADAPTATIONS TO AEROBIC TRAINING

E R NADEL (Yale University, New Haven, CT) American Scientist (ISSN 0003-0996), vol 73, July-Aug 1985, p 334-343. refs

Physiological factors which increase physical endurance are discussed. Fatigue occurs in slow twitch muscle fibers as they become depleted of their glycogen reserves. Constant regeneration of adenosine triphosphate (ATP), from which muscle energy is released by hydrolysis, powers sustained muscular exertion.

Re-energization is accomplished by delivering sufficient oxygen to the ATP breakdown product, adenosine diphosphate (ADP). Complete depletion of the ATP supply is inhibited by a build-up of anaerobic byproducts, which lower the muscle pH values. Extramuscular substrates cannot be used as reservoirs fast enough to offset fatigue in prolonged exercise. Daily physical activity enhances the ability to deliver oxygen through increased pulmonary ventilation rates. The oxygen supply can then, at 50 percent maximum power, keep the muscle reactions completely aerobic. Data indicate that the functions of all physiological systems related to resistance to fatigue are altered by regular, strenuous physical exercise. The most significant change is increased blood volume, which benefits several bodily functions related to maintaining power output. M S K

CORONARY CIRCULATION OF THE HEALTHY MAN EXPOSED TO TILT TESTS, LBNP, AND HEAD-DOWN TILT
V E KATKOV, V V CHESTUKHIN, and L I KAKURIN (Nauchno-Issledovatel'skii Institut Transplantologii i Iskusstvennykh Organov, Institut Mediko-Biologicheskikh Problem, Moscow, USSR) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 741-747. refs

The effect of tilt (head-up and head-down) tests, LBNP tests, and 7-d head-down tilt (at -15 deg) on coronary circulation was investigated in healthy male volunteers. Catheters were implanted into the coronary sinus and brachial artery. The Glanz catheter in the coronary sinus was used to measure volume flow in the area (constant thermodilution), pressure, and to withdraw samples of outflowing blood for biochemical analysis (acid-base equilibrium and oxygenation). Transfer from supine to upright body position, lower body negative pressure (-30 mm Hg for 20 min), as well as 15 deg head-down (by day 5-6) produced similar changes in the basic parameters of coronary circulation—reduction of blood flow and oxygen consumption, decrease of pressure in the coronary sinus, and increase of coronary resistance. Transfer from head-up to head-down position caused opposite changes of the above parameters. The changes in coronary circulation were adequate for myocardial metabolic requirements since the biochemical composition of the outflowing blood remained essentially constant during the gravitational exposures described. COMPARATIVE STUDY OF PHYSICAL AND MENTAL INCAPACITIES AMONG PORTUGUESE AIRLINE PILOTS UNDER AND OVER AGE 60

A CASTELO-BRANCO, A CABRAL-SA, and J C BORGES (TAP Air Portugal, Lisbon, Portugal) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 752-757. refs

The number of definitive flight incapacitations and deaths which occurred between 1945 and 1983 among Portuguese airline pilots age 60 or older (group of 28) were compared with the data for the pilots under 60 (group of 408). The comparisons were made according to results of medical (cardiovascular, metabolic, osteomuscular, urologic, ophthalmologic, respiratory, and other syndromes) and psychological (psychomotor efficiency, intellectual efficiency, personal structure, and signs of involution) examinations. There were 21 cases of death and incapacities in the younger

groups through accidents and unforeseen severe diseases while in the group of 60 and over, the ten incapacities found resulted from slow chronic degenerative disorders, with association of both chronic physical and psychic involution. The remaining 18 pilots over 60 (64 percent) were perfectly fit for flight duties. I S

EFFECT OF DIFFERENT ASCENT PROFILES ON PERFORMANCE AT 4,200 M ELEVATION

P J G FORSTER (Royal Liverpool Hospital, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 758-764. refs

Two groups of sea level residents were studied at the summit of Mauna Kea (4,200 m elevation) following ascent by vehicle. 'Commuters' spent 6 h at the summit, while 'shiftworkers' lived on the mountain for 5 d. Although PaO₂ levels were lower in commuters, they experienced fewer altitude sickness symptoms than shiftworkers on the first day at 4,200 m. After 5 d, shiftworkers reported fewer symptoms and performed better at tests of numerate memory and psychomotor ability than commuters. At high altitude, pulse rates were increased in both groups, but only shiftworkers exhibited an elevation in systemic blood pressure. Arterial-alveolar oxygen tension gradients were not increased at 4,200 m. Despite frequent and rapid ascents and descents, with minimal provision for acclimatization, high altitude pulmonary and cerebral oedemas were uncommon. Author

THE EFFECTS OF TTS-SCOPOLAMINE, DIMENHYDRINATE, LIDOCAINE, AND TOCAINIDE ON MOTION SICKNESS, VERTIGO, AND NYSTAGMUS

I PYYKKO (Institute of Occupational Health, Helsinki, Finland), S PADOAN (Kristianstad, Central Hospital, Sweden), L SCHALEN, M MAGNUSSON, N G HENRIKSSON (Lund, University Hospital, Sweden) et al. Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, Aug 1985, p 777-782. refs

Experimentally induced vertigo (by caloric stimulation of the ears), nausea (by Coriolis maneuver), and nystagmus during the tests were significantly reduced by administering TTS-scopolamine (transdermally, 10 micrograms/h) and dimenhydrinate (orally, 100 mg) to healthy human subjects. Lidocaine (administered i.v. to the ave plasma conc of 6 mol/l) and tocanide (i.v. to ave conc of 20 mol/l) had no effect on vertigo, nausea, or rotation-induced nystagmus, although these drugs reduced the caloric nystagmus. The efficiency of TTS-scopolamine and of dimenhydrinate on alleviation of the motion sickness syndrome is explained by their targeting cells in the vestibular nuclei and reducing the neuron activity. N85-30584# Joint Publications Research Service, Arlington, Va. DEVELOPMENT OF GUIDELINES FOR SETTING PHYSIOLOGICAL AND HYGIENIC STANDARDS FOR NOISE LEVELS IN AEROSPACE MEDICINE

Y V KRYLOV. In: *its USSR Rept. Space Biol and Aerospace Med.*, Vol 18, No 5, Sep-Oct 1984, p 1-8. 20 Nov 1984. refs. Transl into ENGLISH from *Kosmich Biol i Aviakosmich Med (Moscow)*, v 18, no 5, Sep-Oct 1984, p 4-7. Avail. NTIS HC A08

The development of the physiologic and hygienic principles of noise standardization in aerospace medicine is described. The contribution of aerospace medicine to the theory of noise standardization is emphasized. Also discussed are principles of standardization with respect to noise equivalent levels, dose-based standardization, as well as noise tolerance related to the work

load Further studies are needed to assess the applicability of the above principles for the evaluation of noise effects onboard flying vehicles

COSMONAUTS' POSTURAL REACTIONS AFTER LONG-TERM MISSIONS ABOARD SALYUT-6 ORBITAL STATION
V V KALINICHENKO and A F ZHERNAVKOV *In its* USSR Rept Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 9-13 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 7-10
Avail NTIS HC A08

Tilt tests were used to study changes in cardiovascular responses to ortho- and antiorthostasis of four cosmonauts after their 96- and 140-day flights onboard Salyut-6 Preflight the cosmonauts were exposed to head-up and head-down tests in order to facilitate their readaptation to weightlessness Postflight all cosmonauts exhibited a better cardiovascular capability to counteract cranial blood redistribution during antiorthostatic tilt tests This can be considered as a result of their adaptation to weightlessness After flight every crewmember showed a significant decrease of orthostatic tolerance One of the factors responsible for the lower orthostatic tolerance is assumed to be inactivity of the vascular tone mechanisms It is suggested that their better stimulation before reentry may improve the efficacy of countermeasures against postflight orthostatic disorders Author

**BLOOD SERUM ENZYME ACTIVITY FOLLOWING LONG TERM
 SPACEFLIGHTS**

I A POPOVA, Y G VETROVA, and T Y DROZDOVA *In its* USSR Rept Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 122-124 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 81-82 Avail NTIS HC A08

At the present time there is much information about changes in blood enzyme activity in people with different states of stress, such as maximum physical loads, gravitational accelerations, hypodynamia, etc. A change in blood serum enzyme spectrum is expected as an after effect of spaceflight. Preliminary analysis of the results of each of the 5 main missions (MM) of the Salyut-6 scientific orbital space complex failed to reveal a definite correlation between duration of the missions (from 73 to 185 days) and tendency toward change in enzyme activity. The tests were combined covering all of the main missions, which are viewed as long-term spaceflights for analysis. The patterns of enzymatic reactions of the body to spaceflight conditions were assessed B W

A noninvasive accurate method for measuring the temperature of tissue beneath the surface of a living body is described. Ultrasonic signals are directed into beads of a material that are inserted into the tissue with a syringe. The reflected signals indicate the acoustic impedance or resonance frequency of the beads which in turn indicates the temperature of the tissue. A range of temperatures around the melting temperature of the material can be measured by this method.

**APPLICATIONS OF AEROSPACE TECHNOLOGY IN BIOLOGY
 AND MEDICINE Final Report, 1 Jan. 1982 - 28 Feb. 1983**

D ROUSE Mar 1983 120 p refs (Contract NAS1-16177) (NASA-CR-166100, NAS 1 26 166100) Avail NTIS HC A06/MF A01 CSCL 06E

Utilization of NASA technology and its application to medicine is discussed. The introduction of new or improved commercially

available medical products and incorporation of aerospace technology is outlined. A biopolar donor-recipient model of medical technology transfer is presented to provide a basis for the methodology. The methodology is designed to: (1) identify medical problems and NASA technology that, in combination, constitute opportunities for successful medical products; (2) obtain the early participation of industry in the transfer process; and (3) obtain acceptance by the medical community of new medical products based on NASA technology. Two commercial transfers were completed: the ocular screening device, a system for quick detection of vision problems in preschool children, and Porta-Fib III, a hospital monitoring unit. Two institutional transfers were completed: implant materials testing, the application of NASA fracture control technology to improve reliability of metallic prostheses, and incinerator monitoring, a quadrupole mass spectrometer to monitor combustion products of municipal incinerators. Mobility aids for the blind and ultrasound diagnosis of burn depth are also studied E A K

**SPACE-FLIGHT SIMULATIONS OF CALCIUM METABOLISM
 USING A MATHEMATICAL MODEL OF CALCIUM
 REGULATION**

S N BRAND 7 May 1985 36 p refs (Contract NAS9-17151) (NASA-CR-171883, NAS 1 26 171883, TIR-2114-MED-5016) Avail NTIS HC A03/MF A01 CSCL 06P

The results of a series of simulation studies of calcium metabolic changes which have been recorded during human exposure to bed rest and space flight are presented. Space flight and bed rest data demonstrate losses of total body calcium during exposure to hypogravic environments. These losses are evidenced by higher than normal rates of urine calcium excretion and by negative calcium balances. In addition, intestinal absorption rates and bone mineral content are assumed to decrease. The bed rest and space flight simulations were executed on a mathematical model of the calcium metabolic system. The purpose of the simulations is to theoretically test hypotheses and predict system responses which are occurring during given experimental stresses. In this case, hypogravity occurs through the comparison of simulation and experimental data and through the analysis of model structure and system responses. The model reliably simulates the responses of selected bed rest and space flight parameters. When experimental data are available, the simulated skeletal responses and regulatory factors involved in the responses agree with space flight data collected on rodents. In addition, areas within the model that need improvement are identified. Author

HEAT INJURY: PREVENTION IS THE KEY

L E ARMSTRONG and R W HUBBARD 2 Apr 1985 22 p (AD-A153734, USARIEM-M-25/85) Avail NTIS HC A02/MF A01 CSCL 06N

This article deals with the two longest problems facing runners today: dehydration and elevated rectal temperature. Varieties of heat injuries are described and responsibility for prevention of heat injury is discussed. The effectiveness of showers and fine-mist sprays in cooling runners is disputed. Race directors can postpone or cancel races and, thus, have at their disposal the most effective means of stopping heat injury. Runners, too, must take

precautionary measures during hot weather running and should reduce running pace if the signs of heat illness are present

LONGITUDINAL STUDY OF CARDIOVASCULAR DISEASE IN US NAVY PILOTS Interim Report
A HOIBERG Feb 1985 16 p
(AD-A154331, NAVHLTHRSCHC-85-7) Avail NTIS HC A02/MF A01 CSCL 06E

This longitudinal study examined the consequences of cardiovascular disease (CVD) in 145 U.S. Navy pilots who suffered a CVD incident during the 1967 to 1979 time period. Results showed that one pilot died (data were only available for 1974-79), one suffered a second myocardial infarction, and 28 pilots were hospitalized and/or retired with a physical disability because of CVD. The other 79.3% of this pilot subpopulation continued on active duty, retired with no physical disability, or resigned from service. The majority of subsequent CVD incidents occurred during a 12-month period after the initial CVD event; 35% had discontinued flying prior to the initial CVD incident. These findings reflected not only the few CVD cases in this population of 22,245 pilots who served for some time from 1967 to 1979, but also the few after-effects of CVD.

MOUSE OOCYTE KILLING BY NEUTRONS: TARGET CONSIDERATIONS
T STRAUPE and R I DOBSON Apr 1985 10 p refs
Presented at the 9th Symp on Microdosimetry, Toulouse, 20-24 May 1985 Submitted for publication
(Contract W-7405-ENG-48)
(DE85-011362, UCRL-91593, CONF-850506-2) Avail NTIS HC A02/MF A01

Highly radiosensitive primordial mouse oocytes, the principal cells at genetic risk in the female, were studied using 0.43-MeV neutrons. Analysis of the survival curve ($D_{37} = 0.055$ Gy) indicates that the diameter of the radiosensitive target (assumed spherical and of unit density) is larger than that of the nucleus but not of the oocyte, implicating a non-nuclear but sub-cellular target. This is consistent with results from $(3)H$ -thymidine incorporated in DNA. Efforts to identify the extraordinarily radiosensitive lethality target in these primordial oocytes suggest it is the plasma membrane. Monte Carlo calculations for 0.43-MeV neutrons show that at the D_{37} only a single proton recoil will traverse the plasma membrane, consistent with the observed exponential survival curve. A highly sensitive non-DNA target for mouse oocyte killing may importantly influence interpretations of genetic mutation data from mice and their use in estimating genetic risk in humans.

(DE85-009572, LA-UR-85-802, CONF-8410230-11) Avail NTIS HC A03/MF A01

Monitoring the health of space station or lunar base residents will be necessary to provide knowledge of the physiological status of astronauts. Flow cytometric techniques are uniquely capable of providing cellular, chromosome, hormone level and enzyme level information. The use of dye provides the basis for fluorescently labeling specific cellular components. Laser induced fluorescence from stained cells is quantitated in a flow cytometer to measure cellular components such as DNA, RNA and protein. One major application of a flow cytometer is to perform a complete blood count including hematocrit, hemoglobin content, and numbers of platelets, erythrocytes, granulocytes, lymphocytes and monocytes. A newly developed flow cytometry based fluoroimmunoassay

measures levels of serum enzymes and hormones. It also quantitates radiation exposure and some forms of chromosome damage with flow cytometric measurements.

³¹P-NMR STUDIES ON LYMPHOCYTE MEMBRANES IN HUMAN LYMPHOPROLIFERATIVE DISEASES Abstract Only
V Y YUSHMANOV, Y A KURUSHIN, I N KOGARKO, L A SIBELDINA, R A MOKEYEVA, and Y A LUKINA *In its* USSR Rept Life Sci Biomed and Behavioral Sci (JPRS-UBB-85-017) p 31 7 Jun 1985 Transl into ENGLISH from Biol Membrany (Moscow), v 2, no 2, Feb 1985 p 170-175
Avail NTIS HC A07/MF A01

Nuclear Magnetic Resonance (NMR) high resolution studies were conducted on lymphocytes derived from normal control subjects and from patients with lymphoblastic leukemia, lymphoma, paroxysmal renal hemoglobinuria, and myocarditis, to assess the suitability of this technology for differential diagnosis. The spectra of the plasma membranes obtained at 250 and 360 MHz indicated that the lipid components possessed relatively high mobility. The spectral features of the control and leukemic lymphocytes were nonoverlapping, based on comparison of signal intensities and spin-lattice relaxation times of methyl and methylene fatty acid protons and the methyl protons of the polar phosphatidylcholine heads. The data were interpreted to indicate that the differences were due either to a change in the content of various phospholipids in the lymphoproliferative cells, or to altered protein-lipid interactions. It appears, therefore, that high resolution NMR may be useful in analysis of transformed lymphocytes and, by extension, in the differential diagnosis of lymphoproliferative disorders.

PHENOMENON OF UNIVERSAL ROSETTE-FORMING CELL STIMULATION BY EXTREME STRESS Abstract Only
I V PETROVA, S N KUZMIN, T S KURSHAKOVA, R S SUZDALNITSKIY, V A LEVANDO, and B B PERSHIN *In its* USSR Rept Life Sci Biomed and Behavioral Sci (JPRS-UBB-85-017) p 94 7 Jun 1985 Transl into ENGLISH from Zh Mikrobiol Epidemiol Immunobiol (Moscow), no 2, Feb 1985 p 72-76
Avail NTIS HC A07/MF A01

Immunity factors were analyzed in highly trained 18 to 21 year old athletes subjected to extreme physical and emotional stress. Extreme stress situations were found to be without effect on the levels of immunocompetent cells and cells responsible for nonspecific immunity. However, the stressful states depressed the percentage of phagocytically active neutrophils, salivary lysozyme activity (without affecting blood lysozyme activity), and depressed immunoglobulin concentrations. The singularly most impressive effects of extreme stress consisted of pronounced ($p < 0.0001$) elevations of universal rosette-forming lymphocytes and neutrophils vis-a-vis unstressed control subjects. The phenomenon of the universal rosette-forming cells may account for the depletion of immunoglobulins, by assuming that a portion of the circulating immunoglobulins were bound to the surface of these cells due to hormonal and other factors.

ANATOMY OF STRESS Abstract Only
A RYLOV *In its* USSR Rept Life Sci Biomed and Behavioral Sci (JPRS-UBB-85-017) p 95 7 Jun 1985 Transl into ENGLISH from Znaniye-Sila (Moscow), no 2, Feb 1985 p 17-19
Avail NTIS HC A07/MF A01

The now widely accepted theory holds that human and animal behavior is directed at securing some useful adaptational goals, and that to attain such a positive result temporary functional associations are formed between certain brain structures and various organs, referred to as functional systems. Imbalance in such systems or failure to achieve an efficient functional system is the cause of stress. Much data was presented at the conference in support of this theory and its further development. Of particular interest were data on the fact that most damage is sustained by

those organs that received the greatest functional challenge. For example, monkeys terrified while eating developed gastric ulcers, while others developed hypertension under the influence of a similar stimulus presented during a non-eating period R J F.

Avail NTIS HC A08/MF A01 CSCL 06P

Theoretical responses to weightlessness are summarized. The studies include development and validation of a model of erythropoiesis regulation, analysis of the behavior of erythropoiesis under a variety of conditions, simulations of bed rest and space flight, and an evaluation of ground-based animal studies which were conducted as analogs of zero-g. A review of all relevant space flight findings and a set of testable hypotheses which attempt to explain how red cell mass decreases in space flight are presented. An additional document describes details of the mathematical model used in these studies. Author

A mathematical model of the erythropoiesis on total red blood cell mass is presented. The loss of red cell mass has been a consistent finding during space flight. Computer simulation of this phenomenon required a model that could account for oxygen transport, red cell production, and red cell destruction. The elements incorporated into the feedback regulation loop of the model are based on the accepted concept that erythrocyte production is governed by the balance between oxygen supply and demand in the body. The mechanisms and pathways of the control circuit include oxygenation of hemoglobin and oxygenation of tissues by blood transport and diffusional processes. Other features of the model include a variable oxygen-hemoglobin affinity, and time delays which represent time for erythropoietin (erythrocyte-stimulating hormone) distribution in plasma, and time for maturation of the erythrocytes in bone marrow F M R.

A large array of models were applied in a unified manner to solve problems in space flight physiology. Mathematical simulation was used as an alternative way of looking at physiological systems and maximizing the yield from previous space flight experiments. A medical data analysis system was created which consists of an automated data base, a computerized biostatistical and data analysis system, and a set of simulation models of physiological systems. Five basic models were employed: (1) a pulsatile cardiovascular model, (2) a respiratory model, (3) a thermoregulatory model, (4) a circulatory, fluid, and electrolyte balance model, and (5) an erythropoiesis regulatory model. Algorithms were provided to perform routine statistical tests, multivariate analysis, nonlinear regression analysis, and autocorrelation analysis. Special purpose programs were prepared for rank correlation, factor analysis, and the integration of the metabolic balance data. E R.

The flow of blood suspensions in the narrow section of a glass tube is studied. The fluid has a highly viscous central phase containing a high concentration of red blood cells and a peripheral

phase composed mainly of less viscous plasma. A perturbation method is used as well as a video technique for flow visualization. It is shown that the separation between phases is progressive. The validity of the visualization method is emphasized.

THE DNA METABOLISM AND POLY-(ADP-RIBOSE) SYNTHESIS IN LYMPHOCYTES OF PERSONS EXPOSED TO LOW DOSES OF IONIZING RADIATION

W. KLEIN, F. KOCSIS, and A. TOPALOGLOU. Jan 1985. 17 p. refs. In GERMAN, ENGLISH summary (OEFS-4307, BL-496/85). Avail. NTIS HC A02/MF A01

The effects of ionizing radiation on the genotype of human lymphocytes are studied to estimate the risks on the organism. The blood of 22 healthy persons exposed to increased radiation was monitored. Accumulated doses, increased in time, have an effect on the semiconservative DNA synthesis and on in vitro nonscheduled DNA synthesis. The correlation between nucleoside sedimentation and the increased dose of ionizing radiation is shown in vivo but not in vitro. There is no correlation with poly-(ADP-ribose)-synthesis. Though the experimental doses are under the limit values of radiation exposure at work, the significant changes in the lymphocyte genotype suggest an increased risk of delayed damage.

AUDITORY IMPAIRMENT AND THE ONSET OF DISABILITY AND HANDICAP IN NOISE-INDUCED HEARING LOSS

D. W. ROBINSON, P. A. WILKINS, N. J. THYER, and J. F. LAWES. Nov 1984. 187 p. refs. (ISVR-TR-126). Avail. NTIS HC A09/MF A01

Subjects with mild degrees of noise induced hearing loss were studied to identify measurable characteristics of hearing that identify the points of onset of hearing disability (defined as difficulty in hearing speech in various circumstances) and of hearing handicap (defined as perceived social disadvantage resulting from the hearing loss). An onset point for disability is identified as 30 dB hearing threshold level, average over 1, 2, and 3 kHz. In the case of handicap, there is a continuous trend starting from normal hearing with no definable threshold of onset.

EVALUATION OF RESULTS OF SPACE EXPERIMENTS IN PHYSIOLOGY AND MEDICINE AND INFORMAL BRIEFINGS BY THE F-16 MEDICAL WORKING GROUP Technical Evaluation Report

K. E. KLEIN. In AGARD. Results of Space Expt. in Physiol. and Med. and Informal Briefings by the F-16 Med. Working Group. 2 p. Mar 1985. Avail. NTIS HC A08/MF A01

The exploration of space exposes man to a unique environment since it contains features which do not exist naturally and can hardly be simulated on Earth. Prominent in this respect is the relative absence of gravity which initiates changes in the human organism mainly through three modes of action: the specific effects of gravity sensing organs, the lack of hydrostatic pressure affecting fluid compartments, and the reduction of deformation forces on load bearing tissues. Data collected during previous space flights demonstrated that almost all physiological systems are affected by the space environment. Some of the most significant changes which have become known so far involve the vestibular, the cardiovascular and the musculo-skeletal system as well as blood and metabolism. Conclusions drawn from symposium proceedings are given. Since pitch and roll in microgravity do not result in otolith displacement, a sensory rearrangement becomes necessary in which the CNS reinterprets all otolith outputs as linear motion (otolith tilt translation reinterpretation hypothesis). The inability of otoliths to provide information on spatial orientation of head and

body is compensated mainly by the increased utilization of visual cues. Spaceflight related redistribution of EMG activities in muscles responsible for posture control occurs in agreement with changes in otolith function. Space motion sickness is most likely provoked by sensory conflicts, in particular during pitch and roll motions, individual susceptibility still can not be predicted, however, the easiness of adaptation to head movements while wearing reversing prisms may be indicative in this respect. For the time being, the mechanisms behind the unexpected finding of a caloric nystagmus in the absence of thermal convection during orbital flight remains inexplicable. R J F

Avail NTIS HC A08/MF A01

The European vestibular experiments on Spacelab 1 were designed to explore vestibular adaptation to the space environment and readaptation to the ground by conducting a series of vestibular tests which were repeated several times at different stages before, during, and after the mission. The tests included the threshold for linear oscillation, eye movements triggered by angular acceleration, optokinetic and caloric stimulation, and measurements of posture. Slow phase velocity of caloric nystagmus was increasing in the course of the mission. The results of most tests could be interpreted as indicating a decreasing gain of CNS processing of otolith information during vestibular adaptation to the space environment. A series of vestibular tests were performed 120, 90, 60, 30 and 11 days before the Spacelab-1 mission and again during the first 6 days after recovery of the space craft. Similar experiments were performed during the mission on board Spacelab by the red shift of the Spacelab scientific crew. After our linear acceleration device Space Sled was descope for the SL-1 mission and postponed to the D 1-mission a body restraint system (BRS) was constructed which allowed linear oscillation of the experimental subject in three different axes by hand operation of the operator. The test subject wore a vestibular helmet, which contained the electroculography amplifiers and a device for insurflation of heated or cooled air into the ears during the caloric test. An infrared sensitive camera (EMIR) ordered the movements of the right eye including eye rotation. The EMIR system was computing the XY displacements of the eye for display on a stripchart recorder in the payload operation center. In front of the left eye was a TV monitor mounted in a visor of the helmet for optokinetic stimulation, calibration and target cross resetting. R J F

A series of experiments was performed during the flight of Spacelab 1 to explore changes in vestibular function and visual vestibular interactions associated with adaptation to microgravity. Tests were also conducted on the ground during the four months before flight and over the six days post flight. Measurements were made of the threshold for detection of linear oscillation and of vestibulo-ocular elicited by angular and linear accelerations and by optokinetic and caloric stimuli. These revealed changes associated with the modified otolith afference in microgravity, though the most unexpected finding was that caloric stimulation in orbital flight evoked nystagmus comparable to that obtained on Earth. Linear self motion detection thresholds, which were recorded as part of the European vestibular Experiments, varied across subjects. This variability is consistent with observations following the STS-8 and STS-11 Shuttle missions. Three astronauts who participated in the STS-8 and STS-11 (41-B) missions served as subjects in this experiment. Nominal amplitudes of parallel swing motion were determined by recording the displacement of a pointer attached to the swing bed relative to a scale taped to the floor. These nominal amplitudes were compared with those determined with a three axis accelerometer and strip chart recorder. The subject indicated his perception of self motion (yes or no) by manipulations of a joystick that was connected to one channel of the strip chart recorder. A small signal lamp was mounted on an ear pad support and was controlled by the experimenter's hand held microswitch. Prolonged weightlessness appeared to produce elevated self motion detection thresholds in one astronaut. However, a similar threshold elevation was not obtained from the other two astronauts. The basis for this discrepancy is unknown but it may be related to altered detection threshold criteria on the part of the astronaut who exhibited the threshold change. Failure to record threshold changes following prolonged weightlessness is consistent with the researcher's otolith tilt translation reinterpretation hypothesis. This hypothesis suggests that the sensitivity of the otolith receptors is not altered by weightlessness, rather the way in which the brain interprets otolith information is changed. R J F

It is hypothesized that exposure to prolonged free fall is a form of sensory/motor rearrangement rather than a direct change in otolith sensitivity or sensory compensation for a reduced otolith input. The rearrangement of stimuli will force a new interpretation by the CNS of otolith input. This reinterpretation is necessary for a structured and meaningful interaction with the new environment. Data from two flight experiments are presented which support an otolith reinterpretation hypothesis. The first experiment measured vestibulo-spinal reflex changes as a function of sustained free fall. Findings indicate that when a monosynaptic reflex (H-reflex), measured from the major postural muscles (soleus), is used adaptation to space flight includes a change in how the CNS interprets a fall. In a normal gravity environment a sudden unexpected fall will produce a potentiated H reflex. After seven days in flight an equivalent fall does not potentiate the reflex. During postflight a greatly increased reflex is observed in those crewmen most susceptible to space motion sickness. In the second experiment self motion perception and torsional eyemovements were modified as a function of exposure to sustained free fall. Preflight roll motion (about the X axis) was perceived as pure roll, and the eye movements recorded were countertorsional. Postflight, roll stimulation was perceived as linear translation (side to side movement) with a small angular motion component. Eye movement measurements confirmed significantly more horizontal motion.

Postural adaptation associated with voluntary arm movement was studied in two subjects in the course of one seven day flight. In weightlessness, a redistribution of electromyographic activity among flexor and extensor muscles was observed at the ankle. The analysis of cinematographic data indicates a definite inclination of the body to lean forward at the beginning of flight, followed by a gradual return to a position identical to the one observed in a terrestrial gravity situation. These results are interpreted utilizing biodynamic diagrams. M G

N85-31814# Stirling Univ (Scotland) Dept of Psychology MASS-DISCRIMINATION DURING PROLONGED WEIGHTLESSNESS

H E ROSS, E E BRODIE, and A BENSON (Royal Air Force Inst of Aviation Medicine). In AGARD Results of Space Expt in Physiol. and Med. and Informal Briefings by the F-16 Med Working Group 3 p. Mar 1985 refs. Avail NTIS HC A08/MF A01

An experiment to compare weight and mass discrimination was conducted using 5 of the crew of STS-9 (Spacelab 1) as subjects. Thresholds for mass discrimination under microgravity in flight were found to be higher by a factor of about 1.8 than for weight discrimination before the flight, and there was no consistent improvement throughout the 10 day mission. This suggests that inertial cues to mass (gained through accelerating objects) are not as effective as weight cues. The crew showed an aftereffect for two or three days on return to Earth, when their bodies felt heavy and their weight discrimination was impaired. This suggests that some adaptation to weightlessness occurred during the flight, probably early in the mission before the majority of the mass discrimination tests were conducted. G L C

Echocardiographic measurements were taken on members of four Space Shuttle missions before (F-10 to F-12) and twice after (L+0 and L+7 to 14 days) 7- to 9-day space flight missions. Such recordings allowed for determination of left ventricular chamber dimensions and subsequent calculations of left ventricular volume and stroke volume. Resting ventricular volume could be shown to significantly decrease 23% on L+) and to be associated with a significant 28% decrease in stroke volume. Studies 7 to 14 days later showed amelioration of effects, but persistence of end diastolic volume change. Such findings occurred despite ability to fully ambulate and exercise during the postflight period. Comparison of findings with bed rested subjects (athletic and nonathletic) showed similar changes, but changes after bed rest were of smaller magnitude compared to the flight crews. It is concluded that space flight induces significant changes in heart volume even after short duration (7-9 days) missions. Heavy athletic conditioning preflight may contribute to the severity of the observed changes in the flight crews and to the apparent slow postflight process of recovery. G L C

In order to see whether the headward fluid shift during spaceflight is followed by increased venous pressures in the upper half of the body in astronauts during the Spacelab 1 Mission pressures in an antecubital vein (PVP) was measured together with the hematocrit (Hct) and the ADH concentration pre-, in- and post-flight. Central venous pressure was followed pre- and post-flight, together with the dy weight (BW) 22 hours after launch PVP was lowered as compared to pre-flight values and remained so during the whole mission, whereas Hct and the ADH were elevated. Apparently the space adaptation of the low pressure system is a highly dynamic process being over within 24 hours. The readaptation to ground conditions follows a similar time course

SENSITIVITY OF HUMAN LYMPHOCYTES TO MICROGRAVITY IN-VITRO

A COGOLI /in AGARD Results of Space Expt in Physiol and Med and Informal Briefings by the F-16 Med Working Group 8 p Mar 1985 refs Avail NTIS HC A08/MF A01

Studies were conducted on the effect of gravity on lymphocytes, the cells responsible for the immune response. A decrease of

lymphocyte reactivity has been observed since 1973 in Soviet and U S astronauts after space flight. Ground-based studies performed in hypergravity and in simulated low-gravity conditions suggest the hypothesis that low-g depresses, whereas high-g increases lymphocyte activation. Cultures of human lymphocytes were flown in an incubator on the 1st Spacelab mission and exposed to the mitogen concanavalin A, a substance capable of activating lymphocytes in-vitro. The stimulation of the flight samples was less than 3 percent of that of the ground controls. Although the results are very clear, it is premature now to draw conclusions from this experiment on the effect of space flight on the immune system of the astronauts

SELECTION PROCEDURES FOR F-16 PILOTS IN THE BELGIAN AIR FORCE

P VANDENBOSCH /in AGARD Results of Space Expt in Physiology and Med and Informal Briefings by the F-16 Med Working Group 8 p Mar 1985 refs Avail NTIS HC A08/MF A01

By the introduction of the high sustained G F-16 aircraft, the problem of the physical standards was raised. These physical standards for flying must ensure that individuals selected for aviation duties are free from medical conditions or defects which could adversely affect flying safety, mission completion, or their own health. The standards should ensure that an individual selected for flying training is qualified for world wide duty. That means that he should not only be capable of enduring the various stresses involved in flying, but also be capable of withstanding the considerable stresses involved in ejection or egress from the aircraft, and in escape and survival in a hostile environment. There exist a number of mild or subclinical medical conditions which could be aggravated by high sustained G or potentially result in sudden pilot incapacitation. The pathology of these conditions influenced by high G effects are examined

G-INDUCED LOSS OF CONSCIOUSNESS (GLC)

R F LANDRY /in AGARD Results of Space Expt in Physiol and Med and Informal Briefings by the F-16 Med Working Group 3 p Mar 1985 Avail NTIS HC A08/MF A01

Although not a new phenomenon, GLC has recently been implicated more frequently as the primary cause for aircraft mishaps. New generation aircraft with the ability of rapid onset and sustainability of high accelerative forces is certainly the major reason for this. Pilot surveys have revealed GLC is more common than previously thought. Prevention of GLC is totally dependent on education of the aircrews. Education on the timely performance of a proper anti-G straining maneuver, the physiology of GLC, and the need to maintain the body in optimal condition for flying

PHYSICAL TRAINING AND G TOLERANCE

K JESSEN *In* AGARD Results of Space Expt in Physiol and Med and Informal Briefings by the F-16 Med Working Group 8 p Mar 1985 refs

Avail NTIS HC A08/MF A01

High performance aircraft impose extreme physiological stress to the pilots. In particular is the G tolerance of the pilots crucial as exposure to sustained and repeated acceleration forces acting in the head-to-foot direction induces increased demands on cardiovascular and pulmonary functions. The use of backward tilting of the seat and of anti-G-suits will in combination with straining maneuvers help tolerance of high G forces. The effect of the straining on G tolerance will depend on the capacity of the cardiovascular system and of the oxidative metabolic capacity of the exercising muscles (in particular abdominal and leg muscles). Physical training could consequently be one possible way to improve G tolerance. The effects of training on the body and how it can be achieved are considered. Author

CENTRIFUGE OPERATIONS AND TRAINING IN THE ROYAL NETHERLANDS AIR FORCE

H VANDENBIGGELAAR and G HOEKSTRA *In* AGARD Results of Space Expt in Physiol and Med and Informal Briefings by the F-16 Med Working Group 4 p Mar 1985

Avail NTIS HC A08/MF A01

With the introduction of a new generation fighter aircraft many nations are confronted with the High Sustained G (HSG) phenomenon. This phenomenon may result in a sudden unexpected loss of consciousness (GLC) which has proven to cause fatalities. Three requirements must be met by the pilot of a HSG fighter in order to be able to master his man machine system, without losing his consciousness: (1) good understanding of the anti-G straining techniques, (2) excellent physical condition, and (3) well fitting anti-G suit. The Royal Netherlands Airforce uses a Human Centrifuge as training aid for the G-training of the F-16 pilot population. How this centrifuge affects pilot training is considered. Author

HYDRAZINE AND THE F-16

R F. LANDRY *In* AGARD Results of Space Expt in Physiol and Med and Informal Briefings by the F-16 Med Working Group 2 p Mar 1985

Avail NTIS HC A08/MF A01

The introduction of the F-16 into many of the world's air forces has also introduced a rocket fuel to many areas previously unfamiliar with the propellant. In the event of the single engine failure or any interruption of hydraulic or electrical power, a high energy, quick response (three seconds) source of emergency power is available in the Emergency Power Unit (EPU) which is fueled by hydrazine. The hydrazine is in the form of H70 (70% N2H4 and 30% H2O) and 6.8 US gallons make a full tank. The toxicity of hydrazine is considered along with ways to safely handle it. Author

APPLICATION OF THE DYNAMIC FLIGHT SIMULATOR (DFS) TO EVALUATE PILOT PERFORMANCE IN A SIMULATED F-14 FLAT SPIN ENVIRONMENT

J EYTH, JR and D P GLEISNER (US Navy, Naval Air Development Center, Warminster, PA) *In* Flight Simulation Technologies Conference, St Louis, MO, July 22-24, 1985, Technical Papers. New York, AIAA, 1985, p 1-5 refs (AIAA PAPER 85-1730)

An investigation is conducted into the aircrew safety problem associated with the steady state flat spin mode of the F-14A aircraft, using the US Navy Dynamic Flight Simulator (DFS), which employs a 50-foot radius human centrifuge as a motion base. DFS is the only ground-based flight simulator capable of reproducing the multidirectional, sustained-G environment of actual flight. Based on the distance of the pilot from the perpendicular spin axis of the aircraft (23 feet), the pilot can be subjected to 'eyeballs-out' G-forces of as much as 6.5 Gs, resulting in nearly total incapacitation. The present flat spin simulations have uncovered several unsuspected aspects of the pilot's response capabilities in this state. OC

EFFECTS OF SOME MOTION SICKNESS SUPPRESSANTS ON STATIC AND DYNAMIC TRACKING PERFORMANCE

D J SCHROEDER, W E COLLINS (FAA, Civil Aeromedical Institute, Oklahoma City, OK), and G W ELAM (Medical Building, Odessa, TX) *Aviation, Space, and Environmental Medicine* (ISSN 0095-6562), vol 56, April 1985, p 344-350 refs

Two studies examined the influence of three established anti-motion sickness drugs on tracking performance in static (stationary) and dynamic (angular acceleration) conditions and on visual fixation ability during motion. In Study I, 40 young men were randomly assigned in equal numbers to either a control (lactose placebo), dimenhydrinate (50 mg), promethazine hydrochloride (25 mg), or mixture (25 mg promethazine plus 10 mg d-amphetamine) group. Study II used 30 new subjects equally divided into control, dimenhydrinate (100 mg), and promethazine (50 mg) groups. Following practice, tests were conducted prior to, and 1, 2, and 4 h after drug ingestion. The depressant drugs had little effect on static tracking, but impaired dynamic tracking performance and reduced ability to maintain visual fixation on a localizer/glide slope instrument due to increased ocular nystagmus. The mixture of promethazine plus d-amphetamine produced none of these deleterious effects. Author

PSYCHOSOCIAL FACTORS AFFECTING SIMULATED AND ACTUAL SPACE MISSIONS

N KANAS (US Veterans Administration Medical Center, San Francisco, CA) *Aviation, Space, and Environmental Medicine* (ISSN 0095-6562), vol 56, Aug 1985, p 806-811 refs

As space missions become longer and broader in scope, and as crews become more heterogeneous, psychological and interpersonal factors will take on increasing importance. In order to isolate instructive psychosocial issues and trends, a review was made of over 60 American and Russian simulation and spaceflight studies and reports. Although the missions accomplished most of their goals, psychological and social stresses were evident in the crew members. Psychosocial problems tended to relate to mission length. There was evidence that the use of appropriate psychological testing and interpersonal sensitivity training could improve crew selection and ameliorate problems in the simulation.

THE VALUE OF DMT IN THE SELECTION OF PILOTS

L SJOEBERG Aug 1984 9 p refs Transl into ENGLISH from Nord Psykologi (Norway), v 33, no 4, 1981 p 241-248 (RAE-TRANS-2127, BR95821) Avail NTIS HC A02/MF A01

Critical comments concerning a doctoral thesis in psychology entitled The Dimensioning and Validation of Defence Mechanisms in Percept Genesis are presented (Neuman 1978) An attempt was made to design and evaluate a method of personality diagnosis, by means of which it should be possible inter alia to predict success or failure as a pilot in the Swedish Air Force The test method was based on a total of 760 trainee pilots aged from 17 to 23 years The method was subsequently tested on two new groups of trainee pilots, one of them from the Danish Air Force Neuman's results are to some extent quite striking he reports a notable success in predicting failures in basic pilot training, and also the subsequent failures, e.g., in the form of accidents Since the test - termed DMT (Defence Mechanism Test) - started being used in Air Force selection in 1970, the results of training have also improved quite drastically However there is some doubt as to how far the test has contributed to this improvement, partly because other changes were introduced simultaneously with the test An evaluation is made as to the validity the DMT in the selection of pilots The test is also assessed in terms of its ability to quantify the salient features in personality B W

PSYCHOLOGICAL ISSUES RELEVANT TO ASTRONAUT SELECTION FOR LONG-DURATION SPACE FLIGHT: A REVIEW OF THE LITERATURE Final Technical Paper, Jan. 1982 - Dec. 1983

D L COLLINS Apr 1985 63 p (AD-A154051, AD-E700017, AFHRL-TP-84-41) Avail NTIS HC A04/MF A01 CSCL 05J

Since the inception of the manned spaced program, there has been an emphasis on selecting only those astronauts who would be the most psychologically resistant to problems which could result from the exotic, stressful, and unforgiving environment of space This paper addresses space-related behavioral problems experienced by the United States and the Soviet Union Specifically addressed are contentious episodes and impaired judgements that occurred during the Mercury, Apollo, and Skylab missions Interpersonal dissension has repeatedly occurred among the astronauts and with the authorities on the ground at Houston control The careful selection procedures which have been used in the past have failed to predict that astronauts would be so adversely affected by the stresses of space flight Soviet cosmonauts also experienced repetitive episodes of interpersonal tension and poor judgement during their recording-breaking Salyut space missions The behavioral problems which occur during space flight often do not terminate when the space flight ends, but linger with notable after affects The post-flight problems of ex-astronauts and the implications of isolation and confinement for future long-duration space flights are discussed Other variables (e.g., compatibility, cohesiveness, crew size, and crew performance) which affect group interaction, and the need for psychological compatibility of space crewmembers, are addressed using both American and Soviet literature Also addressed are evolutionary changes in the space mission and the psychological tests that have been used for astronaut selection GRA

The test-taking behavior of some examinees may be so idiosyncratic that their test scores are not comparable to the scores of more typical examinees, Appropriateness indices provide quantitative measures of response-pattern atypicality, An appropriateness index can be viewed as a test statistic for testing a null hypothesis of normal test-taking behavior against an alternative hypothesis of atypical test-taking behavior In this paper performance curves and the performance envelope are introduced as devices for obtaining a least upper bound for the power of the most powerful statistical tests for aberrance The performance envelope of a set of tests is the function on (0,1) whose value at t is the least upper bound of the hit rates of the tests when their false positive rate is t The performance curve of an appropriateness is the performance envelope of the tests for aberrance based on the index For some types of testing anomalies it is possible to determine the performance envelope for the set of all statistical tests for aberrance and to identify a test whose performance curve is identical to this performance envelope An algorithm for computing some of these optimal tests is described, and an example of its use is presented GRA

THE VALUE OF DMT IN THE SELECTION OF PILOTS
 L SJOEBERG Aug 1984 9 p refs Transl into ENGLISH from Nord Psykologi, v 33, no 4, 1981 p 241-248 (BLL-RAE-LIB-TRANS-2127-(5207)) Avail NTIS HC A02/MF A01

Proceeding from a critical consideration of a recently published treatise on defence mechanism test (DMT) and its ability to predict failures in pilot training and subsequent flying accidents, the question is: Has this test succeeded in doing what so many psychologists have been vainly trying to achieve for 50 years, i.e., to quantify the salient features in personality? DMT testing was found to afford some interesting empirical relationships. Neuman's search for objective methods of evaluation, of the potentially practical value of his results and his investigation of the validity of the parallelistic postulate is reviewed. Author

ENGINEERING EDUCATION BASED ON COMPUTER SIMULATION
 D B SPALDING Mar 1985 15 p (CFD/85/1) Avail NTIS HC A02/MF A01

It is proposed that the applied-science component of engineering education can be most effectively conducted by extensive use of computer-simulation techniques. The analytical-model component would be cut back to give greater prominence to fundamental laws and their simpler manifestations, and to allow students to explore the more complex consequences of these laws by means of specially-designed computer simulators. Laboratory experiments would remain important but they would be employed mainly as tests of the realism of the simulations. Author (ESA)

DIGITAL SIMULATION OF THE MAN-MACHINE SYSTEM 'AIRCRAFT' [ZUR DIGITALEN SIMULATION DES MENSCH-MASCHINE-SYSTEMS 'FLUGZEUG']
 B DOERING (Forschungsinstitut fuer Anthropotechnik, Wachtberg-Werthhoven, West Germany) Ortung und Navigation (ISSN 0474-7550), vol 26, no 1, 1985, p 51-73 In German refs

The modeling, implementation, simulation, and analysis involved in the digital simulation of the aircraft man-machine system are examined. A procedure for system analysis is given along with a few mathematical models of the aircraft dynamics and the pilot behavior. The implementation converts this conceptual model into an internal computerized model. Examples of simulation languages used in these procedures are given. Temporal state trajectories are obtained which describe the behavior of the aircraft system. Each state is characterized by corresponding flight-dynamic and pilot-specific values. Some analytical examples are given. CD

APPLICATION OF MANIPULATOR SYSTEMS IN SPACE FLIGHT [ANWENDUNG VON MANIPULATORSYSTEMEN IN DER RAUMFAHRT]
 G HIRZINGER (DFVLR, Institut fuer Dynamik der Flugsysteme, Wessling, West Germany) Deutsche Gesellschaft fuer Luft- und Raumfahrt, Jahrestagung, Hamburg, West Germany, Oct 1-3, 1984 25 p In German refs (DGLR PAPER 84-134)

The development of telemanipulators and robots for use in space missions is discussed, from the perspective of the West German space industry. The need for manipulators with greater capacity for autonomous control via built-in sensors as the distance between the human controller and the manipulator increases (as in GEO or deep-space missions controlled from earth) is stressed, and the application of artificial intelligence methods and other technologies currently available or under development for industrial robots is urged. Consideration is given to sensor technology (TV or CCD cameras, distance sensors, or moment-of-force and tactile sensors), problems associated with microgravity, potential robot applications (rendezvous and docking, assembly and repair, planetary-surface rovers, observation, and problem solving), and the aims of current research at CNES and DFVLR. Drawings, diagrams, and photographs are provided. TK

USING HUMAN MOTION PERCEPTION MODELS TO OPTIMIZE FLIGHT SIMULATOR MOTION ALGORITHMS
 K S FORSSTROM, J DOTY (Northrop Corp., Advanced Systems Div., Pico Rivera, CA), and F M CARDULLO (New York, State University, Binghamton) IN Flight Simulation Technologies Conference, St Louis, MO, July 22-24, 1985, Technical Papers New York, AIAA, 1985, p 46-51 refs (AIAA PAPER 85-1743)

A simulator motion analysis tool has been developed which employs human motion perception models to objectively judge the quality of simulator platform motion. This 'motion analytical tool' is an interactive program that interfaces with the user by means of questions or messages that are printed on a computer CRT terminal. The user may select either a motion input driver or simplified commercial transport aircraft mathematical model to provide aircraft parameter input values. With human perception models thus validated, a motion experimenter can isolate those

motion parameters that most prominently contribute to the pilot's perceived motion O C

CAN HELICOPTERS BE CONTROLLED BY VOICE?

Aerospace Engineering (ISSN 0736-2536), vol 5, July 1985, p 42-47

The possible use of computer speech-generation and speech-recognition systems for display/warning and control functions in the cockpits of military helicopters for high-pilot-workload missions such as nap-of-the-earth flying is discussed, summarizing the results of recent R&D efforts. Consideration is given to the information-processing demands of advanced aircraft and weapon systems, the role of multifunction displays in streamlining the visual input to the pilot, the principles of voice-interactive system design (speech recognizers, speech generators, and syntax processors), the identification of cockpit tasks suitable for voice control, and the optimization of voice warning systems. It is argued that while voice systems are feasible in many applications, their use should be limited (in keeping with the overall strategy of streamlining and simplifying cockpit instrumentation) to the areas of greatest need. SUBJECTIVE EFFECTS OF COMBINED-AXIS VIBRATION. II - COMPARISON OF X-AXIS AND X-PLUS-PITCH VIBRATIONS

R W SCHOENBERGER (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol 56, June 1985, p 559-563 refs (Contract F33615-79-C-0509)

Seated subjects matched their perceptions of the intensity of single-axis vibrations in the X-axis, or combined-axis vibrations made up of X-axis and pitch motions, by adjusting the intensity of a sinusoidal, 5 Hz, Z-axis response vibration. Stimulus vibrations were sinusoidal at 3.15, 4, 5, 6.3 and 8 Hz. For each frequency, both types of vibration were presented at three acceleration levels related to three axis-to-seat distances for the pitch vibrations. Results showed that Z-axis response accelerations were essentially constant across frequency. However, matching responses were significantly higher for X-plus-pitch than for X-axis vibrations. These findings are in contrast to those of a previous experiment involving Y-axis and roll vibrations, and are probably due to additional input from the seat back for X and pitch motions. The two experiments do agree on the importance of the distance of the subject from the axis of rotation for angular motions. In both experiments, as stimulus acceleration (axis-to-seat distance) increased, response acceleration increased substantially at every frequency. Author

PSYCHOPHYSIOLOGICAL NATURE OF AIRCRAFT FEEL

A V VORONA, S V ALESHIN, and A M. SAFRONOV In its USSR Rept Space Biol and Aerospace Med, Vol 18, No 5, Sep-Oct 1984 p 20-25 20 Nov 1984 refs Transl into ENGLISH from Kosmich Biol i Aviakosmich Med (Moscow), v 18, no 5, Sep-Oct 1984 p 14-18 Avail NTIS HC A08

On the basis of reported data and questionnaires filled in by 26 pilots and 60 cadets an attempt was made to give a psychophysiological characterization to aircraft perception It was compared with the characteristics of motor skills and thus the aircraft perception was interpreted as an objective property of flying skills, i.e., a specific expression of automatic actions the pilot performs when flying a plane At a certain stage of the development of the flying skills, some movements are controlled via direct sensations and perceptions of noninstrumented signals The aircraft sensation unloads the pilot's attention allowing him to concentrate on other problems

THE LOCATION OF STRESS IN CLOTHING
 R M CROW and M M DEWAR Dec 1984 38 p In ENGLISH, FRENCH summary
 (AD-A154423, DREO-911) Avail NTIS HC A03/MF A01 CSCL 15E

This paper reports the results of a study to determine where stresses occur in clothing, and thus seams, and what stances cause the maximum stresses in typical Canadian Forces clothing It was found that crossing the arms in front with the hands on the opposite shoulders creates the greatest stress in the shirt or coveralls back This stance imposes stress in the lower part of the back armhole seam Raising the arms over the head creates a stress point at the back armscye Squatting is the stance which causes the greatest stress in the trousers and coveralls, this occurring along the upper, inner leg and crotch area/seams GRA

COLLECTED EPIDEMIOLOGICAL STUDIES OF THE LATE EFFECTS OF INTERNAL RADIUM IN MAN, AND MECHANISTIC INVESTIGATIONS OF THOSE EFFECTS, PART 2 Annual Report, Jul. 1983 - Jun. 1984
 Apr 1985 200 p refs
 (Contract W-31-109-ENG-38)
 (DE85-011174, ANL-84-103-PT-2, AR-15) Avail NTIS HC A09/MF A01

Epidemiological studies of the late effects of internal radium in man, and mechanistic investigations of those effects are discussed. An experimental technique for preparing thin sections of bone and the application of that technique in studying the comparative distribution of radium and plutonium are described Radiological dental changes due to radium in man and dog are compared In the study of the late effects of thorium in man, the relative activities of the daughter products in the lung were determined spectrometrically in vivo The exhalation of thoron in these persons was investigated in relation to lung burden of thorium and to personal factors such as smoking, age, and weight The administration of two isotopes to large mammals was used to demonstrate that the metabolism of plutonium is independent of route of entry and to determine the gastrointestinal absorption of plutonium Data on the exposure of 88 persons to radium were added to the data base, bringing the total of 2400 radium cases under study by the Center for Human Radiobiology DOE

HUMAN BODY DIMENSIONS: BODY OUTLINES AND ENVELOPE CURVES AT DIFFERENT NORMAL POSITIONS AND MOVEMENTS

May 1985 7 p Transl into ENGLISH from Deut Inst fuer Normung (West Germany), v 33, no 402, pt 3 6 p
(HSE-TRANS-10866, DIN-33-402-PT-3, FNERG-AA2-1-84) Avail NTIS HC A02/MF A01

Illustrated examples of human body outlines in the basic positions of standing, sitting, kneeling and lying down on the back are given. There are also body outlines showing possible arm, leg, head and rump movements in these positions. Some figures are shown dressed heavily in black. They represent a lightly dressed person 1865 mm in height (20-25 year old males) of the 95th percentile in the basic positions of standing, sitting, kneeling and lying on the back. The illustrations also show arm, leg, head and rump movements in these basic positions and these are illustrated by thin broken lines. The user of this standard shall bear in mind that both heavy and light clothing restricts movement and that the envelope curves designate outreach when arm, hand, and finger zones are fully stretched. The human body outline in the standing posture is determined not only by physical dimensions but also by very slight corrective movements made to maintain balance and to tense and relax the muscles R J F

In portable breathing apparatus applications at 1 atm, potassium superoxide (KO₂) has exhibited low-utilization efficiency of the available oxygen (O₂) and diminished carbon dioxide-(CO₂) scrubbing capacity caused by the formation of a fused, hydrated-hydroxide/carbonate product coating on the superoxide granules. In earlier work, it was discovered that granules fabricated from an intimate mixture of KO₂ and calcium superoxide, Ca(O₂)₂, did not exhibit formation of a fused product coating and the

utilization efficiency with respect to both O₂ release and CO₂ absorption was superior to KO₂ granules when both types of granules were reacted with humidified CO₂ under identified conditions. In the work described here, single pellets of KO₂, KO₂/Ca(O₂), mixtures and commercially available KO₂ tablets and granules were reacted with a flow of humidified CO₂ in helium at 1- and 10-atm total pressure and at an initial temperature of 40 C. In the 1-atm flow tests, the reaction rates and utilization efficiency of the KO₂/Ca(O₂)₂ pellets were markedly superior to the KO₂ pellets, tablets, and granules when the samples were reacted under identical conditions. However, at 10 atm, the rates of O₂ release and CO₂ absorption, as well as the utilization efficiencies of all the superoxide samples, were one-third to one-eighth of the values observed at 1 atm. The decrease in reaction performance at 10 atm compared to that at 1 atm has been attributed principally to the lower bulk diffusivity of the CO₂ and H₂O reactants in helium at the higher pressure and secondarily to the moderation of the reaction temperature caused by the higher heat capacity of the 10-atm helium Author

ERGONOMIC PROBLEMS REGARDING THE INTERACTIVE TOUCH INPUT VIA SCREENS IN ONBOARD AND GROUND-BASED FLIGHT CONTROL

K P HOLZHAUSEN and K P GAERTNER Jun 1985 22 p refs
Transl into ENGLISH of "Ergonomische Probleme der Interaktiven Beruehreinage ueber Bildschirme bei der Bord- und Bodensertigen Flugfuehrung" Hamburg, Deutsche Gessellschaft fuer Ortung und Navigation, Oct 1978 p 1-18 Transl by Kanner (Leo) Associates, Redwood City, Calif
(Contract NASW-4005)
(NASA-TM-77814, NAS 1 15 77814) Avail NTIS HC A02/MF A01 CSCL 05H

A significant problem concerning the integration of display and switching functions is related to the fact that numerous informative data which have to be processed by man must be read from only a few display devices. A satisfactory ergonomic design of integrated display devices and keyboards is in many cases difficult, because not all functions which can be displayed and selected are simultaneously available. A technical solution which provides an integration of display and functional elements on the basis of the highest flexibility is obtained by using a cathode ray tube with a touch-sensitive screen. The employment of an integrated data input/output system is demonstrated for the cases of onboard and ground-based flight control. Ergonomic studies conducted to investigate the suitability of an employment of touch-sensitive screens are also discussed B W

MANIPULATORS IN TELEOPERATION

W R HAMEL 1985 6 p Presented at the Executive Conf on Remote Operations and Robotics in the Nucl Ind., Pine Mountain, Ga, 21 Apr 1985
(Contract DE-AC05-84OR-21400)

(DE85-010563, CONF-850425-1) Avail NTIS HC A02/MF A01

Teleoperated manipulators represent a mature technology which has evolved over nearly 40 years of applications experience. The wide range of manipulator concepts developed thus far reflect differing applications, priorities, and philosophies. The technology of teleoperated manipulators is in a rapid state of change (just as are industrial robotics) fueled by microelectronics and materials advanced. Large strides in performance and dexterity are now practical and advantageous. Even though improved controls and sensory feedback will increase functionality, overall costs should be reduced as manipulator fabrication and assembly labor costs are reduced through improved manufacturing technology. As these advances begin to materialize, broader applications in nonnuclear areas should occur DOE

TEMPLATE-DIRECTED SYNTHESIS OF NOVEL, NUCLEIC ACID-LIKE STRUCTURES

A W SCHWARTZ and L E ORGEL (Sack Institute for Biological Sciences, San Diego, CA) Science (ISSN 0036-8075), vol 228, May 3, 1985, p 585-587 refs

(Contract NGR-05-067-001)

In studying the origins of life, it is important to examine reactions of substrate mixtures that could plausibly have accumulated on the primitive earth Nucleoside diphosphates would probably have been synthesized along with the standard nucleotides under prebiotic conditions For these reasons, the template-directed reactions of activated derivatives of these diphosphates, alone or mixed with activated nucleotides, were investigated An activated derivative of deoxyguanosine 3',5'-diphosphate condensed efficiently on a polycytidylyl template to give oligonucleotide analogous in which each 3,5'-phosphodiester bond was replaced by a pyrophosphate linkage Oligomers were formed even in the absence of a template, but much more slowly Template-directed condensation occurred also with an analogous deoxyadenosine derivative on polyuridylic acid and with an analogous acycloguanosine derivative on polycytidylic acid Author

A FURTHER CONTRIBUTION TO THE INTERPRETATION OF THE VIKING BIOLOGICAL EXPERIMENTS [ESHCHE K VOPROSU OB INTERPRETATSII BIOLOGICHESKIKH EKSPERIMENTOV KOSMICHESKOGO APPARATA 'VIKING']

A V GARBUZ, L M MUKHIN, S L ORLOV, and A I SHAFIEV
Kosmicheskie Issledovaniia (ISSN 0023-4206), vol 23, May-June 1985, p 486-488 In Russian

Laboratory results are reported which are found to confirm the validity of a certain hypothesis concerning the results of the Viking biological experiments on Mars. Specifically, it is argued that all the results of the biological experiments can be explained by the fact that significant quantities of radiation defects of different nature accumulate on the Martian surface due to the rarefied atmosphere. The interaction of these defects with added solutions leads to the release of those gases which were detected during the Viking experiments. B J

WEAK NEUTRAL CURRENT AND BETA RADIOLYSIS EFFECTS ON THE ORIGIN OF BIOMOLECULAR CHIRALITY

R A HEGSTROM (Wake Forest University, Winston-Salem, NC)
Nature (ISSN 0028-0836), vol 315, June 27, 1985, p 249, 250 refs

Rate equations are defined to estimate the asymmetric decomposition of racemic mixtures by beta radiation. The asymmetry of enantiomer decomposition will depend on the beta ray source strength, the irradiation interval and the temperature. Beta radiolysis is found to be potentially six times as effective as the effects of weak neutral currents, even in chiral molecules with heavy atoms. Beta radiolysis may, then, have been the dominant symmetry-breaking autocatalyst in prebiotic epochs. M S K

Typical Subject Index Listing

The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

AIRCRAFT MANEUVERS

Digital simulation of the man-machine system 'aircraft' p 374 N85-40242

The effectiveness of specific weight training regimens on simulated aerial combat maneuvering G tolerance p 361 N85-42079

AIRCRAFT NOISE

The association of age, flying time, and aircraft type with hearing loss of aircrew in the Israeli Air Force p 359 N85-42055

AIRCRAFT PILOTS

Intracardiac electrophysiologic studies in the medical evaluation of aviators p 360 N85-42073

Psychophysiological nature of aircraft feel p 376 N85-30587

A systematic determination of skill and simulator requirements for airline transport pilot certification [AD-A154135] p 373 N85-30630

Learning and self adaptation applied to the simulation of a human pilot [ONERA-RT-24/5122-SY] p 374 N85-31828

AIRCRAFT SAFETY

Application of the dynamic flight simulator (DFS) to evaluate pilot performance in a simulated F-14 flat spin environment [AIAA PAPER 85-1730] p 372 N85-40552

AIRCRAFT SPIN

Application of the dynamic flight simulator (DFS) to evaluate pilot performance in a simulated F-14 flat spin environment

[AIAA PAPER 85-1730] p 372 A85-40552

ALDOSTERONE

Effect of normoxemic and hypoxemic exercise on renin and aldosterone

p 359 A85-41644

ALGAE

Ku and K-band irradiation of giant Algal cells - The absence of detected bioeffects at 100 W/sq m

p 352 A85-43099

ALGORITHMS

Using human motion perception models to optimize flight simulator motion algorithms

[AIAA PAPER 85-1743] p 374 A85-40559

Performance envelopes and optimal appropriateness measurement

[AD-A154129] p 373 N85-30629

ALLERGIC DISEASES

The state of lipid peroxidation and the thymus-dependent immunity system in patients with allergic diseases of the respiratory organs during rehabilitation in a mountain climate

p 363 A85-42634

ALTITUDE ACCLIMATIZATION

Hemodilution during standardized hemorrhage in high-altitude acclimatized rats

p 351 A85-42070

The state of lipid peroxidation and the thymus-dependent immunity system in patients with allergic diseases of the respiratory organs during rehabilitation in a mountain climate

p 363 A85-42634

ALTITUDE SICKNESS

The environmental symptoms questionnaire in acute mountain sickness

p 361 A85-42085

ALTITUDE SIMULATION

A re-evaluation of the minimum altitude at which hypoxic performance decrements can be detected

p 358 A85-41526

Changes in the serum LDH isoenzymes in monkey during chronic exposure to simulated high altitude

p 350 A85-42062

Increase of plasma renin activity in male and female rabbits subjected to dysbaric conditions

p 350 A85-42069

ALTITUDE TESTS

Oxygen uptake as an indicator of animal adaptation to altitude hypoxia

p 354 A85-30595

ALTITUDE TOLERANCE

Hemodilution during standardized hemorrhage in high-altitude acclimatized rats

p 351 A85-42070

A mechanism for the development of differences in the natural resistance of rats to severe hypoxia

p 351 A85-42633

Effect of different ascent profiles on performance at 4,200 m elevation

p 363 A85-43104

AMINES

Biogenic amine/metabolite response during in-flight emergencies

p 362 A85-42086

ANESTHETICS

Changes in the impedance and bioelectrical activity of the cerebral cortex of rats under the action of anaesthetic drugs

[HSE-TRANS-10371] p 356 N85-30617

ANTARCTIC REGIONS

Microbial ecology of extreme environments Antarctic yeasts and growth in substrate-limited habitats

[NASA-CR-176005] p 355 N85-30609

ANTIBIOTICS

Study of minimal inhibitory concentration of antibiotics on bacteria cultivated in vitro in space (Cytos 2 experiment)

p 352 A85-43102

ANTIBODIES

Effects of interferon on antibody formation

p 353 A85-43274

ANTIHISTAMINICS

Central effects of H1 and H2 antihistamines

p 359 A85-42051

ANTIHYPERTENSIVE AGENTS

Mild hypertension

p 359 A85-42053

ANTIRADIATION DRUGS

Radioprotective efficacy of ATP and adenosine with exposure to high energy protons

p 354 A85-30602

ARM (ANATOMY)

Postural adjustments associated with arm movements in weightlessness

p 370 N85-31813

ARMED FORCES (UNITED STATES)

Health practices in United States Air Force personnel compared to United States adult civilians

p 360 A85-42063

Cardiovascular disease among U S Navy pilots

p 360 A85-42064

ARTERIES

Hypoxia-induced activation in small isolated pulmonary arteries from the cat

p 349 A85-41643

ARTIFICIAL INTELLIGENCE

Application of manipulator systems in space flight

[DGLR PAPER 84-134] p 374 A85-40345

ASCENT

Effect of different ascent profiles on performance at 4,200 m elevation

p 363 A85-43104

ASTRONAUT PERFORMANCE

Psychological issues relevant to astronaut selection for long-duration space flight A review of the literature

[AD-A154051] p 373 N85-30627

ASTRONAUTS

Psychological issues relevant to astronaut selection for long-duration space flight A review of the literature

[AD-A154051] p 373 N85-30627

Experience of science astronaut on the Spacelab-1 mission

p 369 N85-31807

ATHLETES

Physiological characteristics of elite sport parachutists

p 360 A85-42060

AUDIOLOGY

The association of age, flying time, and aircraft type with hearing loss of aircrew in the Israeli Air Force

p 359 A85-42055

Auditory impairment and the onset of disability and handicap in noise-induced hearing loss

[ISVR-TR-126] p 368 N85-31801

AUDIOMETRY

Auditory impairment and the onset of disability and handicap in noise-induced hearing loss

[ISVR-TR-126] p 368 N85-31801

AUDITORY DEFECTS

The association of age, flying time, and aircraft type with hearing loss of aircrew in the Israeli Air Force

p 359 A85-42055

Auditory impairment and the onset of disability and handicap in noise-induced hearing loss

[ISVR-TR-126] p 368 N85-31801

AUTORADIOGRAPHY

Development of a recombinant DNA assay system for the detection of genetic change in astronauts cells

[DE85-010103] p 357 N85-31781

B

BACTERIA

Study of minimal inhibitory concentration of antibiotics on bacteria cultivated in vitro in space (Cytos 2 experiment)

p 352 A85-43102

Genetics in methylotrophic bacteria

[DE85-011460] p 356 N85-30615

Investigation of variation in the concentration of bacteria in outdoor testing, with the use of a detector for aerosols of bacteria

[FOA-C-40201-B2] p 358 N85-31784

BALLISTOCARDIOGRAPHY

Three-dimensional ballistocardiography in microgravity

p 371 N85-31818

BARORECEPTORS

The nature of baroreceptor reflexes in the presence of negative and positive emotional stimuli

p 352 A85-43061

BEADS

Method for thermal monitoring subcutaneous tissue

[NASA-CASE-LAR-13028-1] p 365 N85-30618

BED REST

Effect of 120-day antorthostatic bedrest on gas exchange and pulmonary circulation in man

p 364 N85-30589

Regional circulation during testing on isokinetic dynamometer following 14-day bedrest

p 364 N85-30590

BETA PARTICLES

Weak neutral current and beta radiolysis effects on the origin of biomolecular chirality

p 380 A85-41903

BIBLIOGRAPHIES

Publications of the NASA CELSS (Controlled Ecological Life Support Systems) program

[NASA-CR-39111] p 355 N85-30608

Aerospace Medicine and Biology A continuing bibliography with indexes (supplement 272)

[NASA-SP-7011(272)] p 365 N85-30620

Human factors engineering data sources, an overview

[FOA-C-56044-H2] p 379 N85-31837

BIOASSAY

Flow cytometry for health monitoring in space

[DE85-009572] p 366 N85-30625

Development of a recombinant DNA assay system for the detection of genetic change in astronauts cells

[DE85-010103] p 357 N85-31781

Investigation of variation in the concentration of bacteria in outdoor testing, with the use of a detector for aerosols of bacteria

[FOA-C-40201-B2] p 358 N85-31784

BIOASTRONAUTICS

Space motion sickness - Etiological hypotheses and a proposal for diagnostic clinical examination

p 361 A85-42077

Spatial orientation in weightlessness and readaptation to Earth's gravity

p 369 N85-31811

Study of the cardiovascular system in microgravity Results and perspectives

p 370 N85-31816

BIOCHEMISTRY

Hypnotics and aircrew

p 359 A85-42052

Diet of first Soviet expedition on Mount Everest

p 376 N85-30586

Investigation of biochemical and psychological parameters of air traffic controllers in prestart state before beginning to work

p 365 N85-30599

Biocalculation project

[NASA-CR-176044] p 357 N85-31744

USSR report Life sciences Biomedical and behavioral sciences

[JPRS-UBB-85-017] p 358 N85-31785

BIOELECTRICITY

Changes in the impedance and bioelectrical activity of the cerebral cortex of rats under the action of anaesthetic drugs

[HSE-TRANS-10371] p 356 N85-30617

BIOENGINEERING

Applications of aerospace technology in biology and medicine

[NASA-CR-166100] p 365 N85-30619

BIOLOGICAL EFFECTS

Exposure of human models in the near and far field - A companion

p 375 A85-43098

Ku and K-band irradiation of giant Algal cells - The absence of detected bioeffects at 100 W/sq m

p 352 A85-43099

Study of minimal inhibitory concentration of antibiotics on bacteria cultivated in vitro in space (Cytos 2 experiment)

p 352 A85-43102

Investigation of biochemical and psychological parameters of air traffic controllers in prestart state before beginning to work

p 365 N85-30599

Metabolic mechanisms of plant growth at low water potentials

p 356 N85-30612

Aerospace Medicine and Biology A continuing bibliography with indexes (supplement 272)

[NASA-SP-7011(272)] p 365 N85-30620

A systems analysis of the erythropoietic responses to weightlessness Volume 1 Mathematical model simulations of the erythropoietic responses to weightlessness

[NASA-CR-171890] p 367 N85-31794

Zinc Biological effects Facts and fiction

[USIP-84-12] p 367 N85-31798

BIOLOGICAL EVOLUTION

Template-directed synthesis of novel, nucleic acid-like structures

p 379 A85-40407

Genesis on planet earth The search for life's beginning (2nd edition) --- Book

p 379 A85-40788

Weak neutral current and beta radiolysis effects on the origin of biomolecular chirality

p 380 A85-41903

Organization of the R region in maize

[DE85-011273] p 357 N85-31780

BIOLOGICAL MODELS (MATHEMATICS)

Regulation of hematopoiesis in rats exposed to antorthostatic, hypokinetic/hypodynamia I - Model description

p 350 A85-42068

An integrated analysis of the physiological effects of space flight Executive summary

[NASA-CR-171892] p 367 N85-31796

BIOLOGY

Biology and Medicine Division

[DE85-010638] p 356 N85-30613

BIOMEDICAL DATA

Zinc Biological effects Facts and fiction

[USIP-84-12] p 367 N85-31798

BIOMETRICS

Transition to metric units in medical radiology --- Russian book on use of metric system

p 375 A85-42242

BIONICS

Organization of the R region in maize

[DE85-011273] p 357 N85-31780

USSR report Life sciences Biomedical and behavioral sciences

[JPRS-UBB-85-017] p 358 N85-31785

BIOTECHNOLOGY

Applications of aerospace technology in biology and medicine

[NASA-CR-166100] p 365 N85-30619

- USSR report. Life sciences Biomedical and behavioral sciences
[JPRS-UBB-85-017] p 358 N85-31785
- BLOOD**
Blood serum enzyme activity following long term spaceflights p 365 N85-30604
Rat blood serum and liver carbohydrates and lipids in recovery period after 15-day hypokinesia p 355 N85-30606
- BLOOD CIRCULATION**
Regional circulation during testing on isokinetic dynamometer following 14-day bedrest p 364 N85-30590
Long term exposure of animals to antihypertensive (-90 deg) as a model of critical homeostatic disturbances p 353 N85-30592
Nature of postural changes in human hemodynamics with intake of synocarb alone and in combination with obsidan p 364 N85-30597
- BLOOD FLOW**
A two phase flow model at the level of a narrowing section --- blood flow p 367 N85-31799
- BLOOD PLASMA**
Change in glutathione reductase activity in the blood and tissues of thyroidectomized animals accompanied by temperature drops p 351 A85-42635
- BLOOD PRESSURE**
Effect of normoxemic and hypoxemic exercise on renin and aldosterone p 359 A85-41644
Early central venous pressure changes in the rat during two different levels of head-down suspension p 353 A85-43110
Effect of 120-day antihypertensive bedrest on gas exchange and pulmonary circulation in man p 364 N85-30589
- BLOOD VOLUME**
Hemodilution during standardized hemorrhage in high-altitude acclimatized rats p 351 A85-42070
Physiological adaptations to aerobic training p 362 A85-42529
A possible driving mechanism for regional redistribution of cardiac output due to hypovolemia p 352 A85-43059
A systems analysis of the erythropoietic responses to weightlessness Volume 1 Mathematical model simulations of the erythropoietic responses to weightlessness [NASA-CR-171890] p 367 N85-31794
- BODY FLUIDS**
Fluid replacement during hypothermia p 349 A85-42057
- BODY KINEMATICS**
Human body dimensions Body outlines and envelope curves at different normal positions and movements [HSE-TRANS-10866] p 378 N85-30640
- BODY MEASUREMENT (BIOLOGY)**
Modification of Ots-McKerrow valve for measurement of respiratory water loss p 376 A85-43111
Human body dimensions Body outlines and envelope curves at different normal positions and movements [HSE-TRANS-10866] p 378 N85-30640
Physical dimensions of humans, values, envelope curves in different postures [HSE-TRANS-10869] p 379 N85-31838
- BODY TEMPERATURE**
Comparison of thermal responses between rest and leg exercise in water p 359 A85-41645
Method for thermal monitoring subcutaneous tissue [NASA-CASE-LAR-13028-1] p 365 N85-30618
Heat injury Prevention is the key [AD-A153734] p 365 N85-30622
- BODY WEIGHT**
A mechanism for the development of differences in the natural resistance of rats to severe hypoxia p 351 A85-42633
- BONE DEMINERALIZATION**
Effects of simulated weightlessness on bone mineral metabolism p 358 A85-41325
Rat bone tissue after flight aboard Cosmos 1129 biosatellite p 353 N85-30593
- BONE MINERAL CONTENT**
Effects of simulated weightlessness on bone mineral metabolism p 358 A85-41325
Rat bone tissue after flight aboard Cosmos-1129 biosatellite p 353 N85-30593
- BONES**
Rat bone tissue after flight aboard Cosmos-1129 biosatellite p 353 N85-30593
- BRAIN**
The pallidum (morphology and physiology) --- Russian book p 351 A85-42640
Influence of limboreticular complex on some reactions of rabbits p 355 N85-30607
Changes in pentose and glucuronate pathway dehydrogenases in rat brains following single or multiple hypothermic episodes p 358 N85-31790
- Sleep and wake physiology in weightlessness p 371 N85-31819
- BREATHING APPARATUS**
Light-weight oxygen delivery hood assembly for hyperbaric chamber [AD-D011709] p 377 N85-30634
The use of superoxide mixtures as air-revitalization chemicals in hyperbaric, self-contained, closed-circuit breathing apparatus [NASA-TM-86709] p 378 N85-31831
- C**
- CALCIUM**
Effect of periodic accelerations on physicochemical properties and Ca²⁺ reactivity of actomyosin in white rat myocardium and skeletal muscles p 354 N85-30594
Space-flight simulations of calcium metabolism using a mathematical model of calcium regulation [NASA-CR-171883] p 365 N85-30621
- CALCIUM METABOLISM**
Effects of simulated weightlessness on bone mineral metabolism p 358 A85-41325
Use of RU 25960, a new calcium antagonist, in normobaric and hypobaric hypoxia p 350 A85-42061
Space-flight simulations of calcium metabolism using a mathematical model of calcium regulation [NASA-CR-171883] p 365 N85-30621
- CANCER**
Effects of long-term low-level radiofrequency radiation exposure on rats Volume 8 Evaluation of longevity, cause of death, and histopathological findings [AD-A154283] p 356 N85-30610
- CANOPIES**
A study of some factors influencing military parachute landing injuries p 361 A85-42083
- CAPILLARY FLOW**
A two phase flow model at the level of a narrowing section --- blood flow p 367 N85-31799
- CARBOHYDRATE METABOLISM**
Food deprivation and exercise in the heat - Thermoregulatory and metabolic effects p 352 A85-43106
Rat blood serum and liver carbohydrates and lipids in recovery period after 15-day hypokinesia p 355 N85-30606
- CARCINOGENS**
Repair of DNA treated with lambda-irradiation and chemical carcinogens [DE85-010298] p 356 N85-30616
- CARDIAC VENTRICLES**
Changes in cardiovascular function Weightlessness and ground-based studies p 370 N85-31815
- CARDIOGRAPHY**
Changes in cardiovascular function Weightlessness and ground-based studies p 370 N85-31815
- CARDIOLOGY**
Pathogenesis and prevention of stress-related and ischemic heart disorders --- Russian book p 351 A85-42274
- CARDIOVASCULAR SYSTEM**
Fluid replacement during hypothermia p 349 A85-42057
Physiological adaptations to aerobic training p 362 A85-42529
Changes in cardiovascular function and heart adrenergic innervation in the presence of immobilization stress p 352 A85-43060
Cosmonauts' postural reactions after long-term missions aboard Salyut-6 orbital station p 364 N85-30585
Nature of postural changes in human hemodynamics with intake of synocarb alone and in combination with obsidan p 364 N85-30597
Longitudinal study of cardiovascular disease in US Navy pilots [AD-A154331] p 366 N85-30623
Study of the cardiovascular system in microgravity Results and perspectives p 370 N85-31816
Cardiovascular research in space Problems and results p 371 N85-31817
- CASE HISTORIES**
Fatal heatstroke after a short march at night - A case report p 360 A85-42072
- CATALYSIS**
Molecular toxicology of chromatin The role of Poly(ADP-Ribose) in gene control [AD-A154415] p 356 N85-30611
Biocatalysis project [NASA-CR-176044] p 357 N85-31744
- CATECHOLAMINE**
Free, glucuronide, and sulfate catecholamines in the rat Effect of hypoxia p 349 A85-41641
- CATHODE RAY TUBES**
Ergonomic problems regarding the interactive touch input via screens in onboard and ground-based flight control [NASA-TM-77814] p 378 N85-31832
- CELL DIVISION**
Chromosome aberrations in *Crepis capillans* exposed to gamma radiation and cinnosol p 354 N85-30600
- CELLS (BIOLOGY)**
An exposure system for variable electromagnetic-field orientation electrophysiological studies p 375 A85-42873
Ku and K-band irradiation of giant Algal cells - The absence of detected bioeffects at 100 W/sq m p 352 A85-43099
Molecular toxicology of chromatin The role of Poly(ADP-Ribose) in gene control [AD-A154415] p 356 N85-30611
Metabolic mechanisms of plant growth at low water potentials p 356 N85-30612
Mouse oocyte killing by neutrons Target considerations [DE85-011362] p 366 N85-30624
Flow cytometry for health monitoring in space [DE85-009572] p 366 N85-30625
Kidney cell electrophoresis [NASA-CR-171889] p 357 N85-31745
Development of a recombinant DNA assay system for the detection of genetic change in astronaut cells [DE85-010103] p 357 N85-31781
- CENTRAL NERVOUS SYSTEM**
Central effects of H1 and H2 antihistamines p 359 A85-42051
Effect of triphthasine and elenium on changes in evoked bioelectrical activity of the brain exposed to stationary magnetic field p 354 N85-30601
- CENTRIFUGING STRESS**
Hypertension induced by repeated exposure to high sustained +Gz (HS + Gz) stress p 349 A85-42056
Positive Gz accelerations tolerance of individuals 41 to 58 years of age p 364 N85-30588
- CEREBRAL CORTEX**
Effect of triphthasine and elenium on changes in evoked bioelectrical activity of the brain exposed to stationary magnetic field p 354 N85-30601
Changes in the impedance and bioelectrical activity of the cerebral cortex of rats under the action of anaesthetic drugs [HSE-TRANS-10371] p 356 N85-30617
- CERTIFICATION**
A systematic determination of skill and simulator requirements for airline transport pilot certification [AD-A154135] p 373 N85-30630
- CHEMICAL ANALYSIS**
Toxic hazards tests for vehicles and other equipment [AD-A149164] p 367 N85-31797
- CHEMICAL BONDS**
Threshold effects and cellular recognition [DE85-010816] p 356 N85-30614
- CHEMICAL EVOLUTION**
Genesis on planet earth The search for life's beginning (2nd edition) --- Book p 379 A85-40788
Weak neutral current and beta radiolysis effects on the origin of biomolecular chirality p 380 A85-41903
- CHEMILUMINESCENCE**
Function of a device for detection of biological aerosols in field testing [FOA-C-40194-B2] p 357 N85-31782
Investigation of variation in the concentration of bacteria in outdoor testing, with the use of a detector for aerosols of bacteria [FOA-C-40201-B2] p 358 N85-31784
- CHIRAL DYNAMICS**
Weak neutral current and beta radiolysis effects on the origin of biomolecular chirality p 380 A85-41903
- CHROMOSOMES**
Chromosome aberrations in *Crepis capillans* exposed to gamma radiation and cinnosol p 354 N85-30600
- CHRONIC CONDITIONS**
Changes in the serum LDH isoenzymes in monkey during chronic exposure to simulated high altitude p 350 A85-42062
- CIRCADIAN RHYTHMS**
Circadian dynamics of potassium excretion in urine as related to working on one and two shifts p 364 N85-30598
- CIRCULATORY SYSTEM**
Cosmonauts' postural reactions after long-term missions aboard Salyut-6 orbital station p 364 N85-30585
- CIVIL AVIATION**
A systematic determination of skill and simulator requirements for airline transport pilot certification [AD-A154135] p 373 N85-30630
- CLIMATE**
Acclimatization to far north p 367 N85-31792

An integrated analysis of the physiological effects of space flight Executive summary [NASA-CR-171892] p 367 N85-31796
Learning and self adaptation applied to the simulation of a human pilot [ONERA-RT-24/5122-SY] p 374 N85-31828
- CONCENTRATION (COMPOSITION)**
Toxic hazards tests for vehicles and other equipment [AD-A149164] p 367 N85-31797
- CONDITIONING (LEARNING)**
Use of RU 25960, a new calcium antagonist, in normobaric and hypobaric hypoxia p 350 A85-42061
- CONFERENCES**
Results of Space Experiments in Physiology and Medicine and Informal Briefings by the F-16 Medical Working Group [AGARD-CP-377] p 368 N85-31805
- CONSCIOUSNESS**
Operation G-induced loss of consciousness - Something old, something new --- in aircrew flying tactical aircraft p 376 A85-43113
G-induced Loss of Consciousness (GLC) p 371 N85-31823
Centrifuge operations and training in the Royal Netherlands Air Force p 372 N85-31825
- CONSTRICTIONS**
A two phase flow model at the level of a narrowing section --- blood flow p 367 N85-31799
- CONTAMINANTS**
Toxic hazards tests for vehicles and other equipment [AD-A149164] p 367 N85-31797
- CONTROL SIMULATION**
Learning and self adaptation applied to the simulation of a human pilot [ONERA-RT-24/5122-SY] p 374 N85-31828
- COOLING**
Heat injury Prevention is the key [AD-A153734] p 365 N85-30622

CORN

- Organization of the R region in maize [DE85-011273] p 357 N85-31780
- CORONARY CIRCULATION**
Coronary circulation of the healthy man exposed to tilt tests, LBNP, and head-down tilt p 363 A85-43101
- COSMIC RAYS**
Measurement of the spectrum of linear energy losses of cosmic rays by the Cosmos-1129 satellite p 375 A85-41694
Biostack experiments on STS-flights and the impact for man in space p 371 N85-31821
- COSMONAUTS**
Cosmonauts' postural reactions after long-term missions aboard Salyut-6 orbital station p 364 N85-30585
- COSMOS 1129 SATELLITE**
Measurement of the spectrum of linear energy losses of cosmic rays by the Cosmos-1129 satellite p 375 A85-41694
- CROP GROWTH**
Publications of the NASA CELSS (Controlled Ecological Life Support Systems) program [NASA-CR-3911] p 355 N85-30608
- CULTURE TECHNIQUES**
Study of minimal inhibitory concentration of antibiotics on bacteria cultivated in vitro in space (Cytos 2 experiment) p 352 A85-43102
- CYTOLOGY**
Anatomic evidence for peripheral neural processing in mammalian graviceptors p 350 A85-42058
The effect of hyperoxic helium-oxygen gas mixtures on oxygen consumption of white rat tissues p 351 A85-42636
Flow cytometry for health monitoring in space [DE85-009572] p 366 N85-30625

HABITATS

Microbial ecology of extreme environments Antarctic yeasts and growth in substrate-limited habitats [NASA-CR-176005] p 355 N85-30609

HANDBOOKS

Human Engineering Guide to Equipment Design (HEGED) [AD-A154087] p 376 N85-30631

HEAD (ANATOMY)

Studies of infra-thermogram of the head and neck p 362 A85-42485

HEALTH

Development of guidelines for setting physiological and hygienic standards for noise levels in aerospace medicine p 363 N85-30584

Flow cytometry for health monitoring in space [DE85-009572] p 366 N85-30625

HEARING

Auditory impairment and the onset of disability and handicap in noise-induced hearing loss [ISVR-TR-126] p 368 N85-31801

HEART DISEASES

Cardiovascular disease among U S Navy pilots p 360 A85-42064

Intracardiac electrophysiologic studies in the medical evaluation of aviators p 360 A85-42073

Pathogenesis and prevention of stress-related and ischemic heart disorders --- Russian book p 351 A85-42274

Longitudinal study of cardiovascular disease in US Navy pilots [AD-A154331] p 366 N85-30623

HEART FUNCTION

Changes in cardiovascular function and heart adrenergic innervation in the presence of immobilization stress p 352 A85-43060

Changes in cardiovascular function Weightlessness and ground-based studies p 370 N85-31815

HEART MINUTE VOLUME

A possible driving mechanism for regional redistribution of cardiac output due to hypovolemia p 352 A85-43059

HEART RATE

Effects of a 7-day head-down tilt (-6 deg) on the dynamics of oxygen uptake and heart rate adjustment in upright exercise p 360 A85-42066

HEAT

Heat injury Prevention is the key [AD-A153734] p 365 N85-30622

HEAT ACCLIMATIZATION

Physiological acclimatization to heat after a spell of cold conditioning in tropical subjects p 360 A85-42071

Change in glutathione reductase activity in the blood and tissues of thyroidectomized animals accompanied by temperature drops p 351 A85-42635

HEAT STROKE

Fatal heatstroke after a short march at night - A case report p 360 A85-42072

HEAT TOLERANCE

Fatal heatstroke after a short march at night - A case report p 360 A85-42072

The interrelation of the morpho-functional characteristics of the erythron system and hemosynthesizing enzyme activity in the presence of heat p 352 A85-43062

HEATERS

Toxic hazards tests for vehicles and other equipment [AD-A149164] p 367 N85-31797

HEAVY IONS

Biostack experiments on STS-flights and the impact for man in space p 371 N85-31821

HELIUM-OXYGEN ATMOSPHERES

The effect of hyperoxic helium-oxygen gas mixtures on oxygen consumption of white rat tissues p 351 A85-42636

HEMATOCRIT RATIO

A systems analysis of the erythropoietic responses to weightlessness Volume 1 Mathematical model simulations of the erythropoietic responses to weightlessness [NASA-CR-171890] p 367 N85-31794

HEMATOLOGY

The effect of hypoxia and hypoxic hypercapnia on hemodynamic indices and acid-base balance in dogs p 352 A85-43063

HEMATOPOIESIS

Regulation of hematopoiesis in rats exposed to antiorthostatic, hypokinetic/hypodynamia I - Model description p 350 A85-42068

The interrelation of the morpho-functional characteristics of the erythron system and hemosynthesizing enzyme activity in the presence of heat p 352 A85-43062

A systems analysis of the erythropoietic responses to weightlessness Volume 1 Mathematical model simulations of the erythropoietic responses to weightlessness [NASA-CR-171890] p 367 N85-31794

A systems analysis of the erythropoietic responses to weightlessness Volume 2 Description of the model of erythropoiesis regulation Part A Model for regulation of erythropoiesis Part B Detailed description of the model for regulation of erythropoiesis [NASA-CR-171891] p 367 N85-31795

HEMODYNAMIC RESPONSES

Increase of plasma renin activity in male and female rabbits subjected to dysbaric conditions p 350 A85-42069

A possible driving mechanism for regional redistribution of cardiac output due to hypovolemia p 352 A85-43059

Changes in cardiovascular function and heart adrenergic innervation in the presence of immobilization stress p 352 A85-43060

The effect of hypoxia and hypoxic hypercapnia on hemodynamic indices and acid-base balance in dogs p 352 A85-43063

Coronary circulation of the healthy man exposed to tilt tests, LBNP, and head-down tilt p 363 A85-43101

Lower body negative pressure in the tranquilized rat p 353 A85-43109

Early central venous pressure changes in the rat during two different levels of head-down suspension p 353 A85-43110

Nature of postural changes in human hemodynamics with intake of synocarb alone and in combination with obsidan p 364 N85-30597

HEMODYNAMICS

Regional circulation during testing on isokinetic dynamometer following 14-day bedrest p 364 N85-30590

Primate adrenal reactions to antiorthostatic hypokinesia p 353 N85-30591

Long term exposure of animals to antiorthostats (-90 deg) as a model of critical homeostatic disturbances p 353 N85-30592

Nature of postural changes in human hemodynamics with intake of synocarb alone and in combination with obsidan p 364 N85-30597

HEMOGLOBIN

A systems analysis of the erythropoietic responses to weightlessness Volume 1 Mathematical model simulations of the erythropoietic responses to weightlessness [NASA-CR-171890] p 367 N85-31794

A systems analysis of the erythropoietic responses to weightlessness Volume 2 Description of the model of erythropoiesis regulation Part A Model for regulation of erythropoiesis Part B Detailed description of the model for regulation of erythropoiesis [NASA-CR-171891] p 367 N85-31795

HEMORRHAGES

Hemodilution during standardized hemorrhage in high-altitude acclimatized rats p 351 A85-42070

HIGH ALTITUDE ENVIRONMENTS

Effect of different ascent profiles on performance at 4,200 m elevation p 363 A85-43104

HIGH GRAVITY ENVIRONMENTS

Physical training and G tolerance p 372 N85-31824

Centrifuge operations and training in the Royal Netherlands Air Force p 372 N85-31825

HIGH PRESSURE

The use of superoxide mixtures as air-revitalization chemicals in hyperbaric, self-contained, closed-circuit breathing apparatus [NASA-TM-86709] p 378 N85-31831

HIMALAYAS

Diet of first Soviet expedition on Mount Everest p 376 N85-30586

HOMEOSTASIS

Long term exposure of animals to antiorthostats (-90 deg) as a model of critical homeostatic disturbances p 353 N85-30592

HORMONES

Morphological study of primate hypothalamus and hypophysis after experiment with antiorthostatic hypokinesia p 355 N85-30603

HOT WEATHER

Heat injury Prevention is the key [AD-A153734] p 365 N85-30622

HUMAN BEHAVIOR

Psychological issues relevant to astronaut selection for long-duration space flight A review of the literature [AD-A154051] p 373 N85-30627

HUMAN BEINGS

Collected epidemiological studies of the late effects of internal radium in man, and mechanistic investigations of those effects, part 2 [DE85-011174] p 377 N85-30636

HUMAN BODY

Exposure of human models in the near and far field - A companion p 375 A85-43098

Human body dimensions Body outlines and envelope curves at different normal positions and movements [HSE-TRANS-10866] p 378 N85-30640

HUMAN CENTRIFUGES

Centrifuge operations and training in the Royal Netherlands Air Force p 372 N85-31825

HUMAN FACTORS ENGINEERING

Human Engineering Guide to Equipment Design (HEGED) [AD-A154087] p 376 N85-30631

Physical dimensions of humans, values, the effect of clothing, working clothes and protective equipment on the design of work places [HSE-TRANS-10868] p 377 N85-30638

The design of working systems on ergonomic principles The importance of clothes and protective equipment in the design of the workplace [HSE-TRANS-10865] p 378 N85-30639

Human body dimensions Body outlines and envelope curves at different normal positions and movements [HSE-TRANS-10866] p 378 N85-30640

Ergonomic problems regarding the interactive touch input via screens in onboard and ground-based flight control [NASA-TM-77814] p 378 N85-31832

The blind and the paralyzed The notion of the tool revealed and integrated in a different organization environment [SNIAS-851-422-104] p 379 N85-31835

Human factors engineering contracts in Sweden An overview
[FOA-C-56043-H2] p 379 N85-31836

Human factors engineering data sources, an overview
[FOA-C-56044-H2] p 379 N85-31837

Physical dimensions of humans, values, envelope curves in different postures
[HSE-TRANS-10869] p 379 N85-31838

HUMAN PATHOLOGY
Cardiovascular disease among U.S. Navy pilots
p 360 A85-42064

Selection procedures for F-16 pilots in the Belgian Air Force
p 371 N85-31822

HUMAN PERFORMANCE
Performance envelopes and optimal appropriateness measurement
[AD-A154129] p 373 N85-30629

The design of working systems on ergonomic principles
The importance of clothes and protective equipment in the design of the workplace
[HSE-TRANS-10865] p 378 N85-30639

Individual observer data for the 1955 Siles-Burch 2 deg pilot investigation --- color vision
[NPL-QU-68] p 378 N85-31830

HUMAN REACTIONS
Zinc Biological effects Facts and fiction
[USIP-84-12] p 367 N85-31798

HUMAN RESOURCES
Air Force Human Resources Laboratory research and development summary
[AD-A154310] p 377 N85-30632

HUMAN TOLERANCES
Positive Gz accelerations tolerance of individuals 41 to 58 years of age
p 364 N85-30588

Effect of 120-day antihypertensive bedrest on gas exchange and pulmonary circulation in man
p 364 N85-30589

Physical training and G tolerance
p 372 N85-31824

Centrifuge operations and training in the Royal Netherlands Air Force
p 372 N85-31825

HUMAN WASTES
Gas analysis techniques for human physiological measurements in space --- Spacelab
[A/6537] p 368 N85-31803

HYDRAZINES
Hydrazine and the F-16
p 372 N85-31826

HYOSCINE
Transderm scopolamine efficacy related to time of application prior to the onset of motion
p 362 A85-42088

HYPERBARIC CHAMBERS
Light-weight oxygen delivery hood assembly for hyperbaric chamber
[AD-D011709] p 377 N85-30634

HYPERCAPNIA
The effect of hypoxia and hypoxic hypercapnia on hemodynamic indices and acid-base balance in dogs
p 352 A85-43063

HYPEROXIA
The effect of hyperoxic helium-oxygen gas mixtures on oxygen consumption of white rat tissues
p 351 A85-42636

HYPERTENSION
Mild hypertension
p 359 A85-42053

Hypertension induced by repeated exposure to high sustained +Gz (HS + Gz) stress
p 349 A85-42056

HYPERTHERMIA
The interrelation of the morpho-functional characteristics of the erythron system and hemostatic enzyme activity in the presence of heat
p 352 A85-43062

Voluntary dehydration and electrolyte losses during prolonged exercise in the heat
p 363 A85-43105

Food deprivation and exercise in the heat - Thermoregulatory and metabolic effects
p 352 A85-43106

HYPOBARIC ATMOSPHERES
Use of RU 25960, a new calcium antagonist, in normobaric and hypobaric hypoxia
p 350 A85-42061

HYPODYNAMIA
Regulation of hematopoiesis in rats exposed to antihypertensive, hypokinetic/hypodynamia I - Model description
p 350 A85-42068

HYPOKINESIA
Regulation of hematopoiesis in rats exposed to antihypertensive, hypokinetic/hypodynamia I - Model description
p 350 A85-42068

Early central venous pressure changes in the rat during two different levels of head-down suspension
p 353 A85-43110

Regional circulation during testing on isokinetic dynamometer following 14-day bedrest
p 364 N85-30590

Primate adrenal reactions to antihypertensive hypokinesia
p 353 N85-30591

Distinctions of rat lymphatic organ reactions to acute stress factor during hypokinesia
p 354 N85-30596

Morphological study of primate hypothalamus and hypophysis after experiment with antihypertensive hypokinesia
p 355 N85-30603

Changes in nephron and juxtaglomerular system of primate kidneys under the effect of antihypertensive hypokinesia
p 355 N85-30605

Rat blood serum and liver carbohydrates and lipids in recovery period after 15-day hypokinesia
p 355 N85-30606

HYPOTENSION
Hemodilution during standardized hemorrhage in high-altitude acclimatized rats
p 351 A85-42070

Lower body negative pressure in the tranquilized rat
p 353 A85-43109

HYPOTHALAMUS
Morphological study of primate hypothalamus and hypophysis after experiment with antihypertensive hypokinesia
p 355 N85-30603

HYPOTHERMIA
Fluid replacement during hypothermia
p 349 A85-42057

Comparison of the hunting reaction in normals and individuals with Raynaud's disease
p 361 A85-42084

Changes in pentose and glucuronate pathway dehydrogenases in rat brains following single or multiple hypothermic episodes
p 358 N85-31790

HYPVOLEMIA
A possible driving mechanism for regional redistribution of cardiac output due to hypovolemia
p 352 A85-43059

HYPOXEMIA
Effect of normoxemic and hypoxemic exercise on renin and aldosterone
p 359 A85-41644

HYPOXIA
A re-evaluation of the minimum altitude at which hypoxic performance decrements can be detected
p 358 A85-41526

Free, glucuronide, and sulfate catecholamines in the rat
Effect of hypoxia
p 349 A85-41641

Hypoxia-induced activation in small isolated pulmonary arteries from the cat
p 349 A85-41643

Use of RU 25960, a new calcium antagonist, in normobaric and hypobaric hypoxia
p 350 A85-42061

Changes in the serum LDH isoenzymes in monkey during chronic exposure to simulated high altitude
p 350 A85-42062

A mechanism for the development of differences in the natural resistance of rats to severe hypoxia
p 351 A85-42633

The effect of hypoxia and hypoxic hypercapnia on hemodynamic indices and acid-base balance in dogs
p 352 A85-43063

Effect of different ascent profiles on performance at 4,200 m elevation
p 363 A85-43104

Oxygen uptake as an indicator of animal adaptation to altitude hypoxia
p 354 A85-30595

IMMOBILIZATION
Changes in cardiovascular function and heart adrenergic innervation in the presence of immobilization stress
p 352 A85-43060

IMMUNITY
The state of lipid peroxidation and the thymus-dependent immunity system in patients with allergic diseases of the respiratory organs during rehabilitation in a mountain climate
p 363 A85-42634

Phenomenon of universal rosette-forming cell stimulation by extreme stress
p 366 N85-31789

IMMUNOLOGY
Role of interferon in resistance and immunity to protozoa
p 351 A85-42099

Effects of interferon on antibody formation
p 353 A85-43274

USSR report. Life sciences Biomedical and behavioral sciences
[JPRS-UBB-85-017] p 358 N85-31785

INDEXES (RATIOS)
Performance envelopes and optimal appropriateness measurement
[AD-A154129] p 373 N85-30629

INFORMATION DISSEMINATION
Human factors engineering contracts in Sweden An overview
[FOA-C-56043-H2] p 379 N85-31836

INFRARED DETECTORS
Application of manipulator systems in space flight
[DGLR PAPER 84-134] p 374 A85-40345

INFRARED RADIATION
Studies of infra-thermogram of the head and neck
p 362 A85-42485

INJURIES
Heat injury: Prevention is the key
[AD-A153734] p 365 N85-30622

INORGANIC PEROXIDES

The use of superoxide mixtures as air-revitalization chemicals in hyperbaric, self-contained, closed-circuit breathing apparatus
[NASA-TM-86709] p 378 N85-31831

INTERFERON

Genetics of resistance to the African trypanosomes V
Qualitative and quantitative differences in interferon production among susceptible and resistant mouse strains
p 349 A85-41484

Role of interferon in resistance and immunity to protozoa
p 351 A85-42099

Effects of interferon on antibody formation
p 353 A85-43274

INTERNATIONAL SYSTEM OF UNITS

Transition to metric units in medical radiology --- Russian book on use of metric system
p 375 A85-42242

IONIC DIFFUSION

Changes in the impedance and bioelectrical activity of the cerebral cortex of rats under the action of anaesthetic drugs
[HSE-TRANS-10371] p 356 N85-30617

IONIZATION CHAMBERS

Proton dosimeter design for distributed body organs
p 376 A85-43277

IONIZING RADIATION

Development of a recombinant DNA assay system for the detection of genetic change in astronauts cells
[DE85-010103] p 357 N85-31781

The DNA metabolism and poly-(ADP-ribose) synthesis in lymphocytes of persons exposed to low doses of ionizing radiation
[OEFZS-4307] p 368 N85-31800

ISCHEMIA

Pathogenesis and prevention of stress-related and ischemic heart disorders --- Russian book
p 351 A85-42274

K**KIDNEYS**

Changes in nephron and juxtaglomerular system of primate kidneys under the effect of antihypertensive hypokinesia
p 355 N85-30605

Kidney cell electrophoresis
[NASA-CR-171889] p 357 N85-31745

L**LASERS**

USSR report Life sciences Biomedical and behavioral sciences
[JPRS-UBB-85-017] p 358 N85-31785

LEARNING

Learning and self adaptation applied to the simulation of a human pilot
[ONERA-RT-24/5122-SY] p 374 N85-31828

LESIONS

Effects of long-term low-level radiofrequency radiation exposure on rats Volume 8 Evaluation of longevity, cause of death, and histopathological findings
[AD-A154283] p 356 N85-30610

LEUKEMIAS

H1-NMR studies on lymphocyte membranes in human lymphoproliferative diseases
p 366 N85-31787

LINEAR ENERGY TRANSFER (LET)

Measurement of the spectrum of linear energy losses of cosmic rays by the Cosmos-1129 satellite
p 375 A85-41694

LIPID METABOLISM

A mechanism for the development of differences in the natural resistance of rats to severe hypoxia
p 351 A85-42633

The state of lipid peroxidation and the thymus-dependent immunity system in patients with allergic diseases of the respiratory organs during rehabilitation in a mountain climate
p 363 A85-42634

LIPIDS

Rat blood serum and liver carbohydrates and lipids in recovery period after 15-day hypokinesia
p 355 N85-30606

LIQUID METALS

Liquid metal reactor programs Safeguards and program assurance
[DE85-010621] p 377 N85-30635

LIQUID PROPELLANT ROCKET ENGINES

Hydrazine and the F-16
p 372 N85-31826

LIVER

Rat blood serum and liver carbohydrates and lipids in recovery period after 15-day hypokinesia
p 355 N85-30606

LONG DURATION SPACE FLIGHT

- Otolith tilt-translation reinterpretation following prolonged weightlessness - Implications for preflight training p 362 A85-42091
- Cosmonauts' postural reactions after long-term missions aboard Salyut-6 orbital station p 364 A85-30585
- Blood serum enzyme activity following long term spaceflights p 365 A85-30604
- Psychological issues relevant to astronaut selection for long-duration space flight A review of the literature [AD-A154051] p 373 A85-30627
- Air Force Human Resources Laboratory research and development summary [AD-A154310] p 377 A85-30632
- LONG TERM EFFECTS**
- Voluntary dehydration and electrolyte losses during prolonged exercise in the heat p 363 A85-43105
- Long term exposure of animals to antihistatins (-90 deg) as a model of critical homeostatic disturbances p 353 A85-30592
- LOWER BODY NEGATIVE PRESSURE**
- Coronary circulation of the healthy man exposed to tilt tests, LBNP, and head-down tilt p 363 A85-43101
- Lower body negative pressure in the tranquilized rat p 353 A85-43109

LYMPHOCYTES

- H1-NMR studies on lymphocyte membranes in human lymphoproliferative diseases p 366 A85-31787
- The DNA metabolism and poly-(ADP-ribose) synthesis in lymphocytes of persons exposed to low doses of ionizing radiation [OEFZS-4307] p 368 A85-31800
- Sensitivity of human lymphocytes to microgravity in-vitro p 371 A85-31820

M**MAGNESIUM**

- Effect of periodic accelerations on physicochemical properties and Ca2+ reactivity of actomyosin in white rat myocardium and skeletal muscles p 354 A85-30594

MAGNETIC FIELDS

- Effect of triphthasine and elenium on changes in evoked bioelectrical activity of the brain exposed to stationary magnetic field p 354 A85-30601

MAINTENANCE TRAINING

- Maintenance training simulators prime item development specification Model specification and handbook [AD-A154108] p 373 A85-30628

MALES

- Positive Gz accelerations tolerance of individuals 41 to 58 years of age p 364 A85-30588

MAN MACHINE SYSTEMS

- Digital simulation of the man-machine system 'aircraft' p 374 A85-40242

Manipulators in teleoperation

- [DE85-010563] p 378 A85-31833
- The blind and the paralyzed The notion of the tool revealed and integrated in a different organization environment [SNIAS-851-422-104] p 379 A85-31835

MANIPULATORS

- Application of manipulator systems in space flight [DGLR PAPER 84-134] p 374 A85-40345
- Manipulators in teleoperation [DE85-010563] p 378 A85-31833

MARS SURFACE SAMPLES

- A further contribution to the interpretation of the Viking biological experiments p 380 A85-41697

MASKS

- A prototype test chamber for fit testing of protective masks in the field [FOA-C-40208-C1(C2)] p 379 A85-31834

MASS

- Mass-discrimination during prolonged weightlessness p 370 A85-31814

MATHEMATICAL MODELS

- A systems analysis of the erythropoietic responses to weightlessness Volume 1 Mathematical model simulations of the erythropoietic responses to weightlessness [NASA-CR-171890] p 367 A85-31794
- A systems analysis of the erythropoietic responses to weightlessness Volume 2 Description of the model of erythropoiesis regulation Part A Model for regulation of erythropoiesis Part B Detailed description of the model for regulation of erythropoiesis [NASA-CR-171891] p 367 A85-31795

MEASURING INSTRUMENTS

- Modification of Otis-McKerrow valve for measurement of respiratory water loss p 376 A85-43111

MEDICAL EQUIPMENT

- Portable air mobile life support unit p 375 A85-42090

- Gas analysis techniques for human physiological measurements in space --- Spacelab [A/6537] p 368 A85-31803

MEDICAL SCIENCE

- Transition to metric units in medical radiology --- Russian book on use of metric system p 375 A85-42242
- Applications of aerospace technology in biology and medicine [NASA-CR-166100] p 365 A85-30619

MEDICAL SERVICES

- Portable air mobile life support unit p 375 A85-42090

MEMBRANES

- Threshold effects and cellular recognition [DE85-010816] p 356 A85-30614

MENTAL PERFORMANCE

- A re-evaluation of the minimum altitude at which hypoxic performance decrements can be detected p 358 A85-41526
- Comparative study of physical and mental incapacities among Portuguese Airline pilots under and over age 60 p 363 A85-43103
- Effect of different ascent profiles on performance at 4,200 m elevation p 363 A85-43104

METABOLISM

- Changes in pentose and glucuronate pathway dehydrogenases in rat brains following single or multiple hypothermic episodes p 358 A85-31790

METABOLITES

- Biogenic amine/metabolite response during in-flight emergencies p 362 A85-42086

METEOROLOGICAL PARAMETERS

- A study of some factors influencing military parachute landing injuries p 361 A85-42083

METROLOGY

- Transition to metric units in medical radiology --- Russian book on use of metric system p 375 A85-42242

MICE

- Radioprotective efficacy of ATP and adenosine with exposure to high energy protons p 354 A85-30602
- Mouse oocyte killing by neutrons Target considerations [DE85-011362] p 366 A85-30624

MICROORGANISMS

- Microbial ecology of extreme environments Antarctic yeasts and growth in substrate-limited habitats [NASA-CR-176005] p 355 A85-30609
- Biocatalysis project [NASA-CR-176044] p 357 A85-31744
- Efficiency tests of samplers for microbiological aerosols, a review [FOA-C-40199-B1] p 357 A85-31783

MICROWAVES

- An exposure system for variable electromagnetic-field orientation electrophysiological studies p 375 A85-42873

- Ku and K-band irradiation of giant Algal cells - The absence of detected bioeffects at 100 W/sq m p 352 A85-43099

- Effects of long-term low-level radiofrequency radiation exposure on rats Volume 8 Evaluation of longevity, cause of death, and histopathological findings [AD-A154283] p 356 A85-30610

MILITARY HELICOPTERS

- Can helicopters be controlled by voice? p 375 A85-41071

MILITARY OPERATIONS

- A study of some factors influencing military parachute landing injuries p 361 A85-42083

MINERALS

- Space-flight simulations of calcium metabolism using a mathematical model of calcium regulation [NASA-CR-171883] p 365 A85-30621

MOISTURE

- Metabolic mechanisms of plant growth at low water potentials p 356 A85-30612

MOLECULAR STRUCTURE

- Molecular toxicology of chromatin The role of Poly(ADP-Ribose) in gene control [AD-A154415] p 356 A85-30611

MONKEYS

- Primate adrenal reactions to antihypertensive hypokinesia p 353 A85-30591

MORPHOLOGY

- The pallidum (morphology and physiology) --- Russian book p 351 A85-42640
- Morphological study of primate hypothalamus and hypophysis after experiment with antihypertensive hypokinesia p 355 A85-30603

MOTION AFTEREFFECTS

- Thresholds for detection of linear oscillation following prolonged weightlessness p 369 A85-31810

MOTION PERCEPTION

- Using human motion perception models to optimize flight simulator motion algorithms [AIAA PAPER 85-1743] p 374 A85-40559

MOTION SICKNESS

- A stimulator for laboratory studies of motion sickness in cats p 351 A85-42076
- Space motion sickness - Etiological hypotheses and a proposal for diagnostic clinical examination p 361 A85-42077

MOTION SICKNESS DRUGS

- Evaluation of anti-motion sickness drug side effects on performance p 359 A85-42054
- Effects of some motion sickness suppressants on static and dynamic tracking performance p 372 A85-42059
- Transderm scopolamine efficacy related to time of application prior to the onset of motion p 362 A85-42088
- The effects of TTS-scopolamine, dimenhydrinate, lidocaine, and tocanide on motion sickness, vertigo, and nystagmus p 363 A85-43107

MOTION SIMULATION

- A systematic determination of skill and simulator requirements for airline transport pilot certification [AD-A154135] p 373 A85-30630

MOTIVATION

- Effect of triphthasine and elenium on changes in evoked bioelectrical activity of the brain exposed to stationary magnetic field p 354 A85-30601

MUSCLES

- Effect of periodic accelerations on physicochemical properties and Ca2+ reactivity of actomyosin in white rat myocardium and skeletal muscles p 354 A85-30594

MUSCULAR FATIGUE

- Discharge characteristics of motor units and the surface EMG during fatiguing isometric contractions at submaximal tensions p 362 A85-42087
- Physiological adaptations to aerobic training p 362 A85-42529

MUSCULAR FUNCTION

- Response to muscular exercise following repeated simulated weightlessness p 361 A85-42080
- Discharge characteristics of motor units and the surface EMG during fatiguing isometric contractions at submaximal tensions p 362 A85-42087
- Regional circulation during testing on isokinetic dynamometer following 14-day bedrest p 364 A85-30590
- Postural adjustments associated with arm movements in weightlessness p 370 A85-31813

MUSCULAR STRENGTH

- The effectiveness of specific weight training regimens on simulated aerial combat maneuvering G tolerance p 361 A85-42079

MUTATIONS

- Genetics in methylophilic bacteria [DE85-011460] p 356 A85-30615
- Mouse oocyte killing by neutrons Target considerations [DE85-011362] p 366 A85-30624
- Organization of the R region in maize [DE85-011273] p 357 A85-31780

MYOCARDIAL INFARCTION

- Longitudinal study of cardiovascular disease in US Navy pilots [AD-A154331] p 366 A85-30623

N**NEAR FIELDS**

- Exposure of human models in the near and far field - A comparison p 375 A85-43098

NECK (ANATOMY)

- Studies of infra-thermogram of the head and neck p 362 A85-42485

NERVES

- An exposure system for variable electromagnetic-field orientation electrophysiological studies p 375 A85-42873

NEUROPHYSIOLOGY

- Free, glucuronide, and sulfate catecholamines in the rat Effect of hypoxia p 349 A85-41641
- Anatomic evidence for peripheral neural processing in mammalian graviceptors p 350 A85-42058
- Hypergravity induced prolactin surge in female rats p 350 A85-42067
- The pallidum (morphology and physiology) --- Russian book p 351 A85-42640
- A possible driving mechanism for regional redistribution of cardiac output due to hypovolemia p 352 A85-43059
- Changes in cardiovascular function and heart adrenergic innervation in the presence of immobilization stress p 352 A85-43060

NEUTRAL CURRENTS

- Weak neutral current and beta radiolysis effects on the origin of biomolecular chirality p 380 A85-41903

SUBJECT INDEX

NEUTRON IRRADIATION

Performance following a 500-675 rad neutron pulse
p 351 A85-42078

NEUTRONS

Mouse oocyte killing by neutrons Target considerations
[DE85-011362] p 366 N85-30624

NOISE INJURIES

Auditory impairment and the onset of disability and handicap in noise-induced hearing loss
[ISVR-TR-126] p 368 N85-31801

NOISE POLLUTION

Development of guidelines for setting physiological and hygienic standards for noise levels in aerospace medicine
p 363 N85-30584

NONNEWTONIAN FLOW

A two phase flow model at the level of a narrowing section --- blood flow
p 367 N85-31799

NORMS

Dosimetry and limit values for internal contamination with radionuclides From (International Commission on Radioactive Protection) ICRP-2 to ICRP-30
[IRI-190-84-03] p 368 N85-31804

NUCLEAR EMULSIONS

Measurement of the spectrum of linear energy losses of cosmic rays by the Cosmos-1129 satellite
p 375 A85-41694

NUCLEAR MAGNETIC RESONANCE

Biology and Medicine Division
[DE85-010638] p 356 N85-30613
H1-NMR studies on lymphocyte membranes in human lymphoproliferative diseases
p 366 N85-31787

NUCLEIC ACIDS

Template-directed synthesis of novel, nucleic acid-like structures
p 379 A85-40407

NUCLEOSIDES

Template-directed synthesis of novel, nucleic acid-like structures
p 379 A85-40407
The DNA metabolism and poly-(ADP-ribose) synthesis in lymphocytes of persons exposed to low doses of ionizing radiation
[OEFS-4307] p 368 N85-31800

NUCLEOTIDES

Template-directed synthesis of novel, nucleic acid-like structures
p 379 A85-40407

NUTRITION

Diet of first Soviet expedition on Mount Everest
p 376 N85-30586

NUTRITIONAL REQUIREMENTS

Diet of first Soviet expedition on Mount Everest
p 376 N85-30586

NYSTAGMUS

The effects of TTS-scopolamine, dimenhydrinate, lidocaine, and tocanide on motion sickness, vertigo, and nystagmus
p 363 A85-43107
Influence of limboreticular complex on some reactions of rabbits
p 355 N85-30607
The European vestibular experiments of the Spacelab-1 mission
p 369 N85-31808
Some results of the European vestibular experiments in the Spacelab-1 mission
p 369 N85-31809

O

ONBOARD DATA PROCESSING

Can helicopters be controlled by voice?
p 375 A85-41071

OPERATOR PERFORMANCE

Blink reflex as a parameter of human operator's functional state
p 376 A85-43108

OPTIMIZATION

Using human motion perception models to optimize flight simulator motion algorithms
[AIAA PAPER 85-1743] p 374 A85-40559

ORGANIC CHEMISTRY

Biocatalysis project
[NASA-CR-176044] p 357 N85-31744

ORGANIC PEROXIDES

The state of lipid peroxidation and the thymus-dependent immunity system in patients with allergic diseases of the respiratory organs during rehabilitation in a mountain climate
p 363 A85-42634

ORGANS

Proton dosimeter design for distributed body organs
p 376 A85-43277

ORTHOSTATIC TOLERANCE

Effects of a 7-day head-down tilt (-6 deg) on the dynamics of oxygen uptake and heart rate adjustment in upright exercise
p 360 A85-42066
Regulation of hematopoiesis in rats exposed to antiorthostatic, hypokinetic/hypodynamia I - Model description
p 350 A85-42068
Early central venous pressure changes in the rat during two different levels of head-down suspension
p 353 A85-43110

Effect of 120-day antiorthostatic bedrest on gas exchange and pulmonary circulation in man
p 364 N85-30589

Primate adrenal reactions to antiorthostatic hypokinesia
p 353 N85-30591
Long term exposure of animals to antiorthostatic (-90 deg) as a model of critical homeostatic disturbances
p 353 N85-30592
Changes in nephron and juxtaglomerular system of primate kidneys under the effect of antiorthostatic hypokinesia
p 355 N85-30605

OSCILLATIONS

Thresholds for detection of linear oscillation following prolonged weightlessness
p 369 N85-31810

OSMOSIS

Kidney cell electrophoresis
[NASA-CR-171889] p 357 N85-31745

OTOLITH ORGANS

Otolith tilt-translation reinterpretation following prolonged weightlessness - Implications for preflight training
p 362 A85-42091
Reinterpretation of otolith input as a primary factor in space motion sickness
p 370 N85-31812

OVARIES

Hypergravity induced prolactin surge in female rats
p 350 A85-42067

OXIMETRY

Oxygen uptake as an indicator of animal adaptation to altitude hypoxia
p 354 N85-30595

OXYGEN

Light-weight oxygen delivery hood assembly for hyperbaric chamber
[AD-D011709] p 377 N85-30634

OXYGEN CONSUMPTION

Effects of a 7-day head-down tilt (-6 deg) on the dynamics of oxygen uptake and heart rate adjustment in upright exercise
p 360 A85-42066
Physiological adaptations to aerobic training
p 362 A85-42529
The effect of hyperoxic helium-oxygen gas mixtures on oxygen consumption of white rat tissues
p 351 A85-42636

Oxygen uptake as an indicator of animal adaptation to altitude hypoxia
p 354 N85-30595

OXYGEN METABOLISM

Coronary circulation of the healthy man exposed to tilt tests, LBNP, and head-down tilt
p 363 A85-43101

OXYGEN SUPPLY EQUIPMENT

Light-weight oxygen delivery hood assembly for hyperbaric chamber
[AD-D011709] p 377 N85-30634

P

PALEOBIOLOGY

Genesis on planet earth The search for life's beginning (2nd edition) --- Book
p 379 A85-40788

PARACHUTE DESCENT

A study of some factors influencing military parachute landing injuries
p 361 A85-42083

PARACHUTES

Physiological characteristics of elite sport parachutists
p 360 A85-42060

PARACHUTING INJURY

A study of some factors influencing military parachute landing injuries
p 361 A85-42083

PARASITIC DISEASES

Genetics of resistance to the African trypanosomes V Qualitative and quantitative differences in interferon production among susceptible and resistant mouse strains
p 349 A85-41484

PARTICLE ACCELERATOR TARGETS

Mouse oocyte killing by neutrons Target considerations
[DE85-011362] p 366 N85-30624

PATHOGENESIS

Pathogenesis and prevention of stress-related and ischemic heart disorders --- Russian book
p 351 A85-42274

PATHOLOGICAL EFFECTS

Hypertension induced by repeated exposure to high sustained +Gz (HS + Gz) stress
p 349 A85-42056

PATHOLOGY

Effects of long-term low-level radiofrequency radiation exposure on rats Volume 8 Evaluation of longevity, cause of death, and histopathological findings
[AD-A154283] p 356 N85-30610

PENTOSE

Changes in pentose and glucuronate pathway dehydrogenases in rat brains following single or multiple hypothermic episodes
p 358 N85-31790

PERCEPTION

Mass-discrimination during prolonged weightlessness
p 370 N85-31814

PHYSIOLOGICAL EFFECTS

PERFORMANCE PREDICTION

Performance following a 500-675 rad neutron pulse
p 351 A85-42078

The value of DMT in the selection of pilots
[BLL-RAE-LIB-TRANS-2127-(52)] p 374 N85-31827

PERFORMANCE TESTS

The environmental symptoms questionnaire in acute mountain sickness
p 361 A85-42085
Performance envelopes and optimal appropriateness measurement
[AD-A154129] p 373 N85-30629

PERIPHERAL CIRCULATION

Comparison of the hunting reaction in normals and individuals with Raynaud's disease
p 361 A85-42084

PERIPHERAL NERVOUS SYSTEM

Anatomic evidence for peripheral neural processing in mammalian graviceptors
p 350 A85-42058

PERSONALITY TESTS

The value of DMT in the selection of pilots
[BLL-RAE-LIB-TRANS-2127-(52)] p 374 N85-31827

PERSONNEL SELECTION

Psychological issues relevant to astronaut selection for long-duration space flight. A review of the literature
[AD-A154051] p 373 N85-30627

PHARMACOLOGY

Evaluation of antimotion sickness drug side effects on performance
p 359 A85-42054

PHOTOSYNTHESIS

Metabolic mechanisms of plant growth at low water potentials
p 356 N85-30612

PHYSICAL EXERCISE

A re-evaluation of the minimum altitude at which hypoxic performance decrements can be detected
p 358 A85-41526

Comparison of thermal responses between rest and leg exercise in water
p 359 A85-41645

Fatal heatstroke after a short march at night - A case report
p 360 A85-42072

Response to muscular exercise following repeated simulated weightlessness
p 361 A85-42080

Discharge characteristics of motor units and the surface EMG during fatiguing isometric contractions at submaximal tensions
p 362 A85-42087

Heat injury Prevention is the key
[AD-A153734] p 365 N85-30622

PHYSICAL FACTORS

Physical dimensions of humans, values, envelope curves in different postures
[HSE-TRANS-10869] p 379 N85-31838

PHYSICAL FITNESS

Physiological characteristics of elite sport parachutists
p 360 A85-42060

Physiological adaptations to aerobic training
p 362 A85-42529

Comparative study of physical and mental incapacities among Portuguese Airline pilots under and over age 60
p 363 A85-43103

Physical training and G tolerance
p 372 N85-31824

Centrifuge operations and training in the Royal Netherlands Air Force
p 372 N85-31825

PHYSIOCHEMISTRY

Free, glucuronide, and sulfate catecholamines in the rat
Effect of hypoxia
p 349 A85-41641

Increase of plasma renin activity in male and female rabbits subjected to dysbaric conditions
p 350 A85-42069

Biogenic amine/metabolite response during in-flight emergencies
p 362 A85-42086

Zinc Biological effects Facts and fiction
[USIP-84-12] p 367 N85-31798

PHYSIOLOGICAL ACCELERATION

Operation G-induced loss of consciousness - Something old, something new --- in aircrew flying tactical aircraft
p 376 A85-43113

PHYSIOLOGICAL DEFENSES

Genetics of resistance to the African trypanosomes V Qualitative and quantitative differences in interferon production among susceptible and resistant mouse strains
p 349 A85-41484

Role of interferon in resistance and immunity to protozoa
p 351 A85-42099

Effects of interferon on antibody formation
p 353 A85-43274

PHYSIOLOGICAL EFFECTS

Effects of simulated weightlessness on bone mineral metabolism
p 358 A85-41325

A re-evaluation of the minimum altitude at which hypoxic performance decrements can be detected
p 358 A85-41526

Free, glucuronide, and sulfate catecholamines in the rat
Effect of hypoxia
p 349 A85-41641

Central effects of H1 and H2 antihistamines
p 359 A85-42051

Mild hypertension
p 359 A85-42053

Evaluation of antimotion sickness drug side effects on performance
p 359 A85-42054

- Fluid replacement during hypothermia p 349 A85-42057
- Effects of some motion sickness suppressants on static and dynamic tracking performance p 372 A85-42059

Zinc Biological effects Facts and fiction
[USIP-84-12] p 367 N85-31798

Typical Personal Author Index Listing

Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

- ABDRAKHMANOV, V. R.**
Effect of 120-day antihypertensive bedrest on gas exchange and pulmonary circulation in man
p 364 N85-30589
- AKOPOVA, A. B.**
Measurement of the spectrum of linear energy losses of cosmic rays by the Cosmos-1129 satellite
p 375 A85-41694
- ALEKSEYEV, Y. I.**
Morphological study of primate hypothalamus and hypophysis after experiment with antihypertensive hypokinesia
p 355 N85-30603
- ALESHIN, S. V.**
Psychophysiological nature of aircraft feel
p 376 N85-30587
- ANDERSON, D. J.**
Reinterpretation of otolith input as a primary factor in space motion sickness
p 370 N85-31812
- ANTHONISEN, N. R.**
Increased gravitational stress does not alter maximum expiratory flow
p 358 A85-41642
- ARBELLE, P.**
Study of the cardiovascular system in microgravity: Results and perspectives
p 370 N85-31816
- ARMSTRONG, L. E.**
Voluntary dehydration and electrolyte losses during prolonged exercise in the heat
p 363 A85-43105
Heat injury: Prevention is the key
[AD-A153734]
p 365 N85-30622
- ARNOLD, R. R.**
Role of interferon in resistance and immunity to protozoa
p 351 A85-42099
- ARROTT, A. P.**
Otolith tilt-translation reinterpretation following prolonged weightlessness - Implications for preflight training
p 362 A85-42091
Thresholds for detection of linear oscillation following prolonged weightlessness
p 369 N85-31810
Reinterpretation of otolith input as a primary factor in space motion sickness
p 370 N85-31812
- ASAKOVA, Y.**
Acclimatization to far north
p 367 N85-31792

- ASHKENAZI, I. E.**
The association of age, flying time, and aircraft type with hearing loss of aircrew in the Israeli Air Force
p 359 A85-42055
- ASSIA, E.**
Fatal heatstroke after a short march at night - A case report
p 360 A85-42072
- ATCHLEY, S. V.**
Development of a recombinant DNA assay system for the detection of genetic change in astronauts cells
[DE85-010103]
p 357 N85-31781

B

- BARABOI, V. A.**
The state of lipid peroxidation and the thymus-dependent immunity system in patients with allergic diseases of the respiratory organs during rehabilitation in a mountain climate
p 363 A85-42634
- BARLOW, E. M.**
Air Force Human Resources Laboratory research and development summary
[AD-A154310]
p 377 N85-30632
- BARNES, F. S.**
An exposure system for variable electromagnetic-field orientation electrophysiological studies
p 375 A85-42873
- BARR, J. C.**
Fluid replacement during hypothermia
p 349 A85-42057
- BEDFORD, T. G.**
Lower body negative pressure in the tranquilized rat
p 353 A85-43109
- BEETHAM, W. P., JR.**
Comparison of the hunting reaction in normals and individuals with Raynaud's disease
p 361 A85-42084
- BEKBOSYNOVA, R. B.**
Change in glutathione reductase activity in the blood and tissues of thyroidectomized animals accompanied by temperature drops
p 351 A85-42635
- BELAKOVSKIY, M. S.**
Diet of first Soviet expedition on Mount Everest
p 376 N85-30586
- BELKANIYA, G. S.**
Primate adrenal reactions to antihypertensive hypokinesia
p 353 N85-30591
Morphological study of primate hypothalamus and hypophysis after experiment with antihypertensive hypokinesia
p 355 N85-30603
- BELLET, D.**
A two phase flow model at the level of a narrowing section
p 367 N85-31799
- BELOSHITSKII, P. V.**
The state of lipid peroxidation and the thymus-dependent immunity system in patients with allergic diseases of the respiratory organs during rehabilitation in a mountain climate
p 363 A85-42634
- BENSON, A.**
The European vestibular experiments of the Spacelab-1 mission
p 369 N85-31808
Some results of the European vestibular experiments in the Spacelab-1 mission
p 369 N85-31809
Mass-discrimination during prolonged weightlessness
p 370 N85-31814
- BEREZOVSKII, V. A.**
A mechanism for the development of differences in the natural resistance of rats to severe hypoxia
p 351 A85-42633
- BERGLUND, T.**
Zinc: Biological effects. Facts and fiction
[USIP-84-12]
p 367 N85-31798
- BERNAUER, E. M.**
The effectiveness of specific weight training regimens on simulated aerial combat maneuvering G tolerance
p 361 A85-42079
- BERTHOZ, A.**
The European vestibular experiments of the Spacelab-1 mission
p 369 N85-31808
Some results of the European vestibular experiments in the Spacelab-1 mission
p 369 N85-31809
- BES, J. C.**
Study of minimal inhibitory concentration of antibiotics on bacteria cultivated in vitro in space (Cytos 2 experiment)
p 352 A85-43102
- BIKLE, D. D.**
Effects of simulated weightlessness on bone mineral metabolism
p 358 A85-41325
- BITOUN, J. P.**
A two phase flow model at the level of a narrowing section
p 367 N85-31799
- BOGDANOV, N. G.**
Diet of first Soviet expedition on Mount Everest
p 376 N85-30586
- BOGOMOLOV, V. V.**
Long term exposure of animals to antihypertensives (-90 deg) as a model of critical homeostatic disturbances
p 353 N85-30592
- BOGUSHEVICH, M. S.**
Long term exposure of animals to antihypertensives (-90 deg) as a model of critical homeostatic disturbances
p 353 N85-30592
- BOIKO, O. A.**
A mechanism for the development of differences in the natural resistance of rats to severe hypoxia
p 351 A85-42633
- BORGES, J. C.**
Comparative study of physical and mental incapacities among Portuguese Airline pilots under and over age 60
p 363 A85-43103
- BOROWSKY, M. S.**
Age and pilot performance
p 361 A85-42081
- BORREDON, P.**
Hypertension induced by repeated exposure to high sustained +Gz (HS + Gz) stress
p 349 A85-42056
- BOWMAN, R. R.**
An exposure system for variable electromagnetic-field orientation electrophysiological studies
p 375 A85-42873
- BOYER, J. S.**
Metabolic mechanisms of plant growth at low water potentials
p 356 N85-30612
- BOYER, P.**
A two phase flow model at the level of a narrowing section
p 367 N85-31799
- BRADWELL, A. R.**
The environmental symptoms questionnaire in acute mountain sickness
p 361 A85-42085
- BRAND, S. N.**
Space-flight simulations of calcium metabolism using a mathematical model of calcium regulation
[NASA-CR-171883]
p 365 N85-30621
- BRAND, U.**
Some results of the European vestibular experiments in the Spacelab-1 mission
p 369 N85-31809
- BRANDENBURGER, G. H.**
Method for thermal monitoring subcutaneous tissue
[NASA-CASE-LAR-13028-1]
p 365 N85-30618
- BRANDT, T.**
The European vestibular experiments of the Spacelab-1 mission
p 369 N85-31808
Some results of the European vestibular experiments in the Spacelab-1 mission
p 369 N85-31809
- BRANDT, U.**
The European vestibular experiments of the Spacelab-1 mission
p 369 N85-31808
- BRODIE, E. E.**
Mass-discrimination during prolonged weightlessness
p 370 N85-31814
- BROWN, G. C.**
Performance following a 500-675 rad neutron pulse
p 351 A85-42078
- BRUNKARD, K. M.**
Ku and K-band irradiation of giant Algal cells - The absence of detected bioeffects at 100 W/sq m
p 352 A85-43099
- BRUZEK, W.**
The European vestibular experiments of the Spacelab-1 mission
p 369 N85-31808
Some results of the European vestibular experiments in the Spacelab-1 mission
p 369 N85-31809

- BUECKER, H**
Biostack experiments on STS-flights and the impact for man in space p 371 N85-31821
- BUENSCH, B**
Cardiovascular research in space Problems and results p 371 N85-31817
- BUNGO, M W**
Changes in cardiovascular function Weightlessness and ground-based studies p 370 N85-31815
- BUNATIAT, A M**
Changes in cardiovascular function and heart adrenergic innervation in the presence of immobilization stress p 352 A85-43060
- BURSTROEM, B**
A prototype test chamber for fit testing of protective masks in the field [FOA-C-40208-C1(C2)] p 379 N85-31834
- BURTON, R R**
The effectiveness of specific weight training regimens on simulated aenal combat maneuvering G tolerance p 361 A85-42079
Operation G-induced loss of consciousness - Something old, something new p 376 A85-43113

C

- CABRAL-SA, A**
Comparative study of physical and mental incapacities among Portuguese Airline pilots under and over age 60 p 363 A85-43103
- CAMA, G**
Three-dimensional ballistocardiography in microgravity p 371 N85-31818
- CANCELLI, C**
Design of a physical model of the cochlea Displacement sensor for small amplitudes in a highly viscous liquid [STN-6] p 368 N85-31802
- CARDULLO, F. M**
Using human motion perception models to optimize flight simulator motion algorithms [AIAA PAPER 85-1743] p 374 A85-40559
- CASTELO-BRANCO, A**
Comparative study of physical and mental incapacities among Portuguese Airline pilots under and over age 60 p 363 A85-43103
- CHADELAUD, M**
Use of RU 25960, a new calcium antagonist, in normobanc and hypobanc hypoxia p 350 A85-42061
- CHANG, S-Y**
Studies of infra-thermogram of the head and neck p 362 A85-42485
- CHEN, D J C**
Development of a recombinant DNA assay system for the detection of genetic change in astronauts cells [DE85-010103] p 357 N85-31781
- CHERDRUNSI, P.**
Hemodilution during standardized hemorrhage in high-altitude acclimatized rats p 351 A85-42070
- CHERTKOV, K S.**
Radioprotective efficacy of ATP and adenosine with exposure to high energy protons p 354 N85-30602
- CHESTUKHIN, V V**
Coronary circulation of the healthy man exposed to tilt tests, LBNP, and head-down tilt p 363 A85-43101
- CHOU, C K**
Effects of long-term low-level radiofrequency radiation exposure on rats Volume 8 Evaluation of longevity, cause of death, and histopathological findings [AD-A154283] p 356 N85-30610
- CHRETIEN, P**
Use of RU 25960, a new calcium antagonist, in normobanc and hypobanc hypoxia p 350 A85-42061
- CHRYSSANTHOU, C**
Increase of plasma renin activity in male and female rabbits subjected to dysbaric conditions p 350 A85-42069
- CLAUSTRE, J**
Free, glucuronide, and sulfate catecholamines in the rat Effect of hypoxia p 349 A85-41641
- CLEMENT, G**
Postural adjustments associated with arm movements in weightlessness p 370 N85-31813
- COGOLI, A**
Sensitivity of human lymphocytes to microgravity in-vitro p 371 N85-31820
- COLICE, G L**
Effect of normoxemic and hypoxemic exercise on renin and aldosterone p 359 A85-41644
- COLLINS, D L**
Psychological issues relevant to astronaut selection for long-duration space flight A review of the literature [AD-A154051] p 373 N85-30627
- COLLINS, W E**
Effects of some motion sickness suppressants on static and dynamic tracking performance p 372 A85-42059

- CONVERTINO, V A**
Response to muscular exercise following repeated simulated weightlessness p 361 A85-42080
- COOPER, W L., JR**
Liquid metal reactor programs Safeguards and program assurance [DE85-010621] p 377 N85-30635
- COTTET-EMARD, J M**
Free, glucuronide, and sulfate catecholamines in the rat Effect of hypoxia p 349 A85-41641
- CRAMPTON, G H**
A stimulator for laboratory studies of motion sickness in cats p 351 A85-42076
- CROW, R M**
The location of stress in clothing [AD-A154423] p 377 N85-30633
- CROWLEY, J**
Effects of long-term low-level radiofrequency radiation exposure on rats Volume 8 Evaluation of longevity, cause of death, and histopathological findings [AD-A154283] p 356 N85-30610
- CRUESS, D F**
Health practices in United States Air Force personnel compared to United States adult civilians p 360 A85-42063

D

- DAHLGREN, K**
A prototype test chamber for fit testing of protective masks in the field [FOA-C-40208-C1(C2)] p 379 N85-31834
- DANGELO, S**
Design of a physical model of the cochlea Displacement sensor for small amplitudes in a highly viscous liquid [STN-6] p 368 N85-31802
- DAOUST, M.**
Use of RU 25960, a new calcium antagonist, in normobanc and hypobanc hypoxia p 350 A85-42061
- DAROFF, R B**
Space motion sickness - Etological hypotheses and a proposal for diagnostic clinical examination p 361 A85-42077
- DASTOOR, M**
Biocatalysis project [NASA-CR-176044] p 357 N85-31744
- DAWSON, C A.**
Hypoxia-induced activation in small isolated pulmonary arteries from the cat p 349 A85-41643
- DAY, W**
Genesis on planet earth The search for life's beginning (2nd edition) p 379 A85-40788
- DE GEE, A L W**
Genetics of resistance to the African trypanosomes V Qualitative and quantitative differences in interferon production among susceptible and resistant mouse strains p 349 A85-41484
- DEGEE, A L W**
Role of interferon in resistance and immunity to protozoa p 351 A85-42099
- DEGTARENKOVA, N V**
Nature of postural changes in human hemodynamics with intake of synocarb alone and in combination with obsidan p 364 N85-30597
- DEITRICK, R W**
Physiological characteristics of elite sport parachutists p 360 A85-42060
- DEMUTH, H J**
A systematic determination of skill and simulator requirements for airline transport pilot certification [AD-A154135] p 373 N85-30630
- DENISOV, A F**
Investigation of biochemical and psychological parameters of air traffic controllers in prestart state before beginning to work p 365 N85-30599
- DEQUAE, P**
Sleep and wake physiology in weightlessness p 371 N85-31819
- DEWAR, M M**
The location of stress in clothing [AD-A154423] p 377 N85-30633
- DICHGANS, J**
The European vestibular experiments of the Spacelab-1 mission p 369 N85-31808
Some results of the European vestibular experiments in the Spacelab-1 mission p 369 N85-31809
- DMITRIYEVA, N V**
Changes in the impedance and bioelectrical activity of the cerebral cortex of rats under the action of anaesthetic drugs [HSE-TRANS-10371] p 356 N85-30617
- DOBSON, R I**
Mouse oocyte killing by neutrons Target considerations [DE85-011362] p 366 N85-30624

- DOERING, B**
Digital simulation of the man-machine system 'aircraft' p 374 A85-40242
- DOLGOVA, Z. IA**
Change in glutathione reductase activity in the blood and tissues of thyroidectomized animals accompanied by temperature drops p 351 A85-42635
- DOTY, J**
Using human motion perception models to optimize flight simulator motion algorithms [AIAA PAPER 85-1743] p 374 A85-40559
- DRASGOW, F**
Performance envelopes and optimal appropriateness measurement [AD-A154129] p 373 N85-30629
- DROZDOVA, T Y.**
Blood serum enzyme activity following long term spaceflights p 365 N85-30604
- DUDKIN, V E**
Measurement of the spectrum of linear energy losses of cosmic rays by the Cosmos-1129 satellite p 375 A85-41694
- DUFOUR, P. A.**
Publications of the NASA CELSS (Controlled Ecological Life Support Systems) program [NASA-CR-3911] p 355 N85-30608
- DUNN, C D R**
Regulation of hematopoiesis in rats exposed to antihistostatic, hypokinetic/hypodynamia I - Model description p 350 A85-42068
- DYAKONOV, A S**
Effect of triphthasine and elenium on changes in evoked bioelectrical activity of the brain exposed to stationary magnetic field p 354 N85-30601

E

- EDDY, P P**
A systematic determination of skill and simulator requirements for airline transport pilot certification [AD-A154135] p 373 N85-30630
- ELAM, G W**
Effects of some motion sickness suppressants on static and dynamic tracking performance p 372 A85-42059
- ELCOMBE, D D**
A re-evaluation of the minimum altitude at which hypoxic performance decrements can be detected p 358 A85-41526
- EPPELSON, W L**
The effectiveness of specific weight training regimens on simulated aenal combat maneuvering G tolerance p 361 A85-42079
- EPSTEIN, Y**
Fatal heatstroke after a short march at night - A case report p 360 A85-42072
- ERLICH, J N**
Light-weight oxygen delivery hood assembly for hyperbanc chamber [AD-D011709] p 377 N85-30634
- ESSFELD, D**
Effects of a 7-day head-down tilt (-6 deg) on the dynamics of oxygen uptake and heart rate adjustment in upright exercise p 360 A85-42066
- EYRAUD, M Y**
Age and pilot performance p 361 A85-42081
- EYTH, J, JR**
Application of the dynamic flight simulator (DFS) to evaluate pilot performance in a simulated F-14 flat spin environment [AIAA PAPER 85-1730] p 372 A85-40552

F

- FAENGMARK, I**
Efficiency tests of samplers for microbiological aerosols, a review [FOA-C-40199-B1] p 357 N85-31783

CORPORATE SOURCE INDEX

AEROSPACE MEDICINE AND BIOLOGY / A Continuing Bibliography (Supplement 277)

NOVEMBER 1985

Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

- Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France)**
Results of Space Experiments in Physiology and Medicine and Informal Briefings by the F-16 Medical Working Group
[AGARD-CP-377] p 368 N85-31805
- Air Force Human Resources Lab., Brooks AFB, Tex.**
Psychological issues relevant to astronaut selection for long-duration space flight. A review of the literature
[AD-A154051] p 373 N85-30627
- Air Force Human Resources Laboratory research and development summary**
[AD-A154310] p 377 N85-30632
- Antwerp Univ. (Belgium)**
Sleep and wake physiology in weightlessness
p 371 N85-31819
- Applied Science Associates, Inc., Valencia, Pa.**
Maintenance training simulators prime item development specification. Model specification and handbook
[AD-A154108] p 373 N85-30628
- Argonne National Lab., Ill.**
Collected epidemiological studies of the late effects of internal radium in man, and mechanistic investigations of those effects, part 2
[DE85-011174] p 377 N85-30636
- Arizona Univ., Tucson**
Response to muscular exercise following repeated simulated weightlessness
p 361 A85-42080
- Army Research Inst. of Environmental Medicine, Natick, Mass.**
Heat injury. Prevention is the key
[AD-A153734] p 365 N85-30622
- Army Test and Evaluation Command, Aberdeen Proving Ground, Md.**
Toxic hazards tests for vehicles and other equipment
[AD-A149164] p 367 N85-31797

B

- Baylor Coll. of Medicine, Houston, Tex.**
Regulation of hematopoiesis in rats exposed to antithyroid, hypokinetic/hypodynamia I - Model description
p 350 A85-42068
- Belgian Air Force, Brussels.**
Selection procedures for F-16 pilots in the Belgian Air Force
p 371 N85-31822
- Beth Israel Medical Center, N.Y.**
Increase of plasma renin activity in male and female rabbits subjected to dysbaric conditions
p 350 A85-42069

C

- California Univ., Berkeley Lawrence Berkeley Lab.**
Biology and Medicine Division
[DE85-010638] p 356 N85-30613
- California Univ., Livermore Lawrence Livermore Lab.**
Mouse oocyte killing by neutrons. Target considerations
[DE85-011362] p 366 N85-30624
- California Univ., San Francisco**
Molecular toxicology of chromatin. The role of Poly(ADP-Ribose) in gene control
[AD-A154415] p 356 N85-30611
- Case Western Reserve Univ., Cleveland, Ohio**
Repair of DNA treated with lambda-irradiation and chemical carcinogens
[DE85-010298] p 356 N85-30616
- Centre National de la Recherche Scientifique, Paris (France)**
Postural adjustments associated with arm movements in weightlessness
p 370 N85-31813
- City Univ. of New York, N.Y.**
Increase of plasma renin activity in male and female rabbits subjected to dysbaric conditions
p 350 A85-42069

D

- Danish Defence Command, Vedbaek.**
Physical training and G tolerance
p 372 N85-31824
- Defence Research Establishment, Ottawa (Ontario)**
The location of stress in clothing
[AD-A154423] p 377 N85-30633
- Department of the Air Force, Washington, D.C.**
Light-weight oxygen delivery hood assembly for hyperbaric chamber
[AD-D011709] p 377 N85-30634
- Deutsche Versuchsanstalt fuer Luft- und Raumfahrt, Cologne (West Germany)**
Evaluation of Results of Space Experiments in Physiology and Medicine and Informal Briefings by the F-16 Medical Working Group
p 368 N85-31806
- Experience of science astronaut on the Spacelab-1 mission**
p 369 N85-31807
- Biostack experiments on STS-flights and the impact for man in space**
p 371 N85-31821

E

- Eidgenossische Technische Hochschule, Zurich (Switzerland).**
Sensitivity of human lymphocytes to microgravity in-vitro
p 371 N85-31820
- Emory Univ., Atlanta, Ga.**
Role of interferon in resistance and immunity to protozoa
p 351 A85-42099

F

- Freie Univ., Berlin (West Germany).**
Cardiovascular research in space. Problems and results
p 371 N85-31817

G

- George Washington Univ., Washington, D.C.**
Publications of the NASA CELSS (Controlled Ecological Life Support Systems) program
[NASA-CR-39111] p 355 N85-30608
- Georgia Inst. of Tech., Atlanta.**
Research on the experimental verification of dosimetry calculations
[DE85-011282] p 377 N85-30637

H

- Harvard Medical School, Boston, Mass.**
Threshold effects and cellular recognition
[DE85-010816] p 356 N85-30614
- Health and Safety Executive, Sheffield (England)**
Changes in the impedance and bioelectrical activity of the cerebral cortex of rats under the action of anaesthetic drugs
[HSE-TRANS-10371] p 356 N85-30617
- Physical dimensions of humans, values, the effect of clothing, working clothes and protective equipment on the design of work places**
[HSE-TRANS-10868] p 377 N85-30638
- The design of working systems on ergonomic principles. The importance of clothes and protective equipment in the design of the workplace**
[HSE-TRANS-10865] p 378 N85-30639
- Human body dimensions. Body outlines and envelope curves at different normal positions and movements**
[HSE-TRANS-10866] p 378 N85-30640
- Physical dimensions of humans, values, envelope curves in different postures**
[HSE-TRANS-10869] p 379 N85-31838

I

- Illinois Univ., Urbana**
Performance envelopes and optimal appropriateness measurement
[AD-A154129] p 373 N85-30629
- Imperial Coll. of Science and Technology, London (England)**
Engineering education based on computer simulation
[CFD/85/1] p 374 N85-31829
- Institut de Mecanique des Fluides de Toulouse (France)**
A two phase flow model at the level of a narrowing section
p 367 N85-31799
- Interuniversitair Reactor Instituut, Delft (Netherlands)**
Dosimetry and limit values for internal contamination with radionuclides. From (International Commission on Radioactive Protection) ICRP-2 to ICRP-30
[IRI-190-84-03] p 368 N85-31804

J

- Jet Propulsion Lab., California Inst. of Tech., Pasadena.**
Biocatalysis project
[NASA-CR-176044] p 357 N85-31744
- Joint Publications Research Service, Arlington, Va.**
USSR report. Space Biology and Aerospace Medicine, volume 18, no. 5, September - October 1984
[JPRS-US8-84-007] p 353 N85-30583
- Development of guidelines for setting physiological and hygienic standards for noise levels in aerospace medicine**
p 363 N85-30584

FOREIGN TECHNOLOGY INDEX

AEROSPACE MEDICINE AND BIOLOGY / A Continuing Bibliography (Supplement 277)

NOVEMBER 1985

Typical Foreign Technology Index Listing

Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

AUSTRIA
The DNA metabolism and poly-(ADP-ribose) synthesis in lymphocytes of persons exposed to low doses of ionizing radiation
[OEFS-4307] p 368 N85-31800

BELGIUM
A study of some factors influencing military parachute landing injuries p 361 A85-42083
Sleep and wake physiology in weightlessness p 371 N85-31819
Selection procedures for F-16 pilots in the Belgian Air Force p 371 N85-31822

CANADA
A re-evaluation of the minimum altitude at which hypoxic performance decrements can be detected p 358 A85-41526
Increased gravitational stress does not alter maximum expiratory flow p 358 A85-41642
Exposure of human models in the near and far field - A companion p 375 A85-43098
The location of stress in clothing [AD-A154423] p 377 N85-30633

CHINA, PEOPLE'S REPUBLIC OF
Studies of infra-thermogram of the head and neck p 362 A85-42485

DENMARK
Physical training and G tolerance p 372 N85-31824

FINLAND
The effects of TTS-scopolamine, dimenhydrinate, lidocaine, and tocanide on motion sickness, vertigo, and nystagmus p 363 A85-43107

FRANCE
Free, glucuronide, and sulfate catecholamines in the rat Effect of hypoxia p 349 A85-41841
Hypertension induced by repeated exposure to high sustained +Gz (HS + Gz) stress p 349 A85-42056
Use of RU 25960, a new calcium antagonist, in normobaric and hypobaric hypoxia p 350 A85-42061
Study of minimal inhibitory concentration of antibiotics on bacteria cultivated in vitro in space (Cytos 2 experiment) p 352 A85-43102
A two phase flow model at the level of a narrowing section p 367 N85-31799
Results of Space Experiments in Physiology and Medicine and Informal Briefings by the F-16 Medical Working Group [AGARD-CP-377] p 368 N85-31805
Postural adjustments associated with arm movements in weightlessness p 370 N85-31813
Study of the cardiovascular system in microgravity Results and perspectives p 370 N85-31816
Learning and self adaptation applied to the simulation of a human pilot [ONERA-RT-24/5122-SY] p 374 N85-31828
The blind and the paralyzed The notion of the tool revealed and integrated in a different organization environment [SNIAS-851-422-104] p 379 N85-31835

GERMANY, FEDERAL REPUBLIC OF
Digital simulation of the man-machine system 'aircraft' p 374 A85-40242
Application of manipulator systems in space flight [DGLR PAPER 84-134] p 374 A85-40345
Effects of a 7-day head-down tilt (-6 deg) on the dynamics of oxygen uptake and heart rate adjustment in upright exercise p 360 A85-42066
Physical dimensions of humans, values, the effect of clothing, working clothes and protective equipment on the design of work places [HSE-TRANS-10868] p 377 N85-30638
The design of working systems on ergonomic principles The importance of clothes and protective equipment in the design of the workplace [HSE-TRANS-10865] p 378 N85-30639
Human body dimensions Body outlines and envelope curves at different normal positions and movements [HSE-TRANS-10866] p 378 N85-30640
Evaluation of Results of Space Experiments in Physiology and Medicine and Informal Briefings by the F-16 Medical Working Group p 368 N85-31806
Experience of science astronaut on the Spacelab-1 mission p 369 N85-31807
The European vestibular experiments of the Spacelab-1 mission p 369 N85-31808
Cardiovascular research in space Problems and results p 371 N85-31817
Biostack experiments on STS-flights and the impact for man in space p 371 N85-31821
Ergonomic problems regarding the interactive touch input via screens in onboard and ground-based flight control [NASA-TM-77814] p 378 N85-31832
Physical dimensions of humans, values, envelope curves in different postures [HSE-TRANS-10869] p 379 N85-31838

INDIA
Physiological acclimatization to heat after a spell of cold conditioning in tropical subjects p 360 A85-42071

ISRAEL
The association of age, flying time, and aircraft type with hearing loss of aircrew in the Israeli Air Force p 359 A85-42055
Fatal heatstroke after a short march at night - A case report p 360 A85-42072
Portable air mobile life support unit p 375 A85-42090

ITALY
Design of a physical model of the cochlea Displacement sensor for small amplitudes in a highly viscous liquid [STN-6] p 368 N85-31802
Three-dimensional ballistocardiography in microgravity p 371 N85-31818

JAPAN
Changes in the serum LDH isoenzymes in monkey during chronic exposure to simulated high altitude p 350 A85-42062

NETHERLANDS
Effects of interferon on antibody formation p 353 A85-43274
Dosimetry and limit values for internal contamination with radionuclides From (International Commission on Radioactive Protection) ICRP-2 to ICRP-30 [IRI-190-84-03] p 368 N85-31804
Centrifuge operations and training in the Royal Netherlands Air Force p 372 N85-31825

NORWAY
The value of DMT in the selection of pilots [RAE-TRANS-2127] p 373 N85-30626

PORTUGAL
Comparative study of physical and mental incapacities among Portuguese Airline pilots under and over age 60 p 363 A85-43103

SWEDEN
Function of a device for detection of biological aerosols in field testing p 357 N85-31782
[FOA-C-40194-B2]
Efficiency tests of samplers for microbiological aerosols, a review p 357 N85-31783
[FOA-C-40199-B1]
Investigation of variation in the concentration of bacteria in outdoor testing, with the use of a detector for aerosols of bacteria p 358 N85-31784
[FOA-C-40201-B2]
Zinc Biological effects Facts and fiction p 367 N85-31798
[USIP-84-12]
The value of DMT in the selection of pilots p 374 N85-31827
[BLL-RAE-LIB-TRANS-2127-52]
A prototype test chamber for fit testing of protective masks in the field p 379 N85-31834
[FOA-C-40208-C1(C2)]
Human factors engineering contracts in Sweden An overview p 379 N85-31836
[FOA-C-56043-H2]
Human factors engineering data sources, an overview [FOA-C-56044-H2] p 379 N85-31837

SWITZERLAND
Sensitivity of human lymphocytes to microgravity in-vitro p 371 N85-31820

THAILAND
Hemodilution during standardized hemorrhage in high-altitude acclimatized rats p 351 A85-42070

CONTRACT NUMBER INDEX

AEROSPACE MEDICINE AND BIOLOGY / A Continuing Bibliography (Supplement 277)

NOVEMBER 1985

Typical Contract Number Index Listing

Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

REPORT NUMBER INDEX

AEROSPACE MEDICINE AND BIOLOGY / A Continuing Bibliography (Supplement 277)

NOVEMBER 1985

Typical Report Number Index Listing

Listings in this index are arranged alphabetically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

REPORT

ACCESSION NUMBER INDEX

AEROSPACE MEDICINE AND BIOLOGY / A Continuing Bibliography (Supplement 277)

NOVEMBER 1985

Typical Accession Number Index Listing

Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

ACCESSION

1. Report No. NASA SP-7011 (277)	2. Government Accession No.	3. Recipient's Catalog No.	
4. Title and Subtitle Aerospace Medicine and Biology Continuing Bibliography (Supplement 277)		5. Report Date November 1985	
		6. Performing Organization Code	
7. Author(s) National Aeronautics and Space Administration Washington, D.C. 20546		8. Performing Organization Report No.	
		10. Work Unit No.	
9. Performing Organization Name and Address		11. Contract or Grant No.	
		13. Type of Report and Period Covered	
12. Sponsoring Agency Name and Address		14. Sponsoring Agency Code	
15. Supplementary Notes			
16. Abstract <p style="text-align: center;">This bibliography lists 205 reports, articles, and other documents introduced into the NASA scientific and technical information system in October 1985.</p>			
17. Key Words (Suggested by Author(s)) Aerospace Medicine Bibliographies Biological Effects		18. Distribution Statement Unclassified - Unlimited	
19. Security Classif. (of this report) Unclassified	20. Security Classif (of this page) Unclassified	21. No of Pages 78	22. Price* \$7.00 HC

FEDERAL DEPOSITORY LIBRARY PROGRAM

The Federal Depository Library Program provides Government publications to designated libraries throughout the United States. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and inter-library loans, however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself.

ARKANSAS STATE LIBRARY
